List Manual

Valid for Firmware version SINAMICS G120C 4.5

A5E03052632B AB

Safety Notices

This manual contains information that you should observe to ensure your own personal safety and prevent material damage. The notices referring to your personal safety are highlighted in the manual by a warning triangle; notices that relate to material damage only have no warning triangle. The notices shown below are graded according to the level of hazard (from most to least hazardous):

\triangle

Danger

Indicates that death or serious injury will result if proper precautions are not taken.

Warning

Indicates that death or serious injury may result if proper precautions are not taken.

Caution

With a warning triangle, indicates that minor injury may result if proper precautions are not taken.

Caution

Without a warning triangle, indicates that material damage may result if proper precautions are not taken.

Notice

Indicates that an undesirable result or state may occur if the corresponding instructions are not observed.

If more than one level of danger is simultaneously applicable, the warning notice for the highest level is used. A warning notice with a warning triangle indicating possible personal injury may also include a warning relating to material damage.

Qualified Personnel

The associated device/system may only be installed and operated in conjunction with this documentation. The device/system may only be commissioned and operated by **qualified personnel**. For the purpose of the safety notices in this documentation, "qualified personnel" are those authorized to commission, ground, and label equipment, systems, and circuits in accordance with established safety procedures.

Proper Use of Siemens Products

Note the following:

Warning

Siemens products are only permitted to be used for the applications specified in the catalog and in the associated technical documentation. If third-party products and components are to be used, they must be recommended or approved by Siemens. To ensure proper and safe operation of these products, they must be correctly transported, stored, set up, mounted, installed, commissioned, operated, and maintained. The permissible ambient conditions must be met. Information in the associated documentation must be observed.

Trademarks

All names identified with ® are registered trademarks of Siemens AG. Any other names used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

1.1 Introduction to the parameters

1.1.1 Explanation of the parameter list

The layout of the parameter description is as follows (principle):

r0068[01]	CO: Absolute current actual value / i_act absolute				
	Access level: 3	Access level: 3 Calculated: - Data type: FloatingPo			
	Can be changed: -	Scaling: p2002	Data set: -		
	Unit group: 6_2	Unit selection: p050	5		
	Min	Мах	Factory setting		
	- [Arms]	- [Arms]	- [Arms]		

Fig. 1-1 Read parameter

🚛 Index	BICO (if available)		
p0700[0n]	Command source selection / Cmd src sel			
G120C_DP	Access level: 1	Calculated: -	Data type: Integer16	
A	Can be changed: ⊺	Scaling: -	Data set: CDS, p0170	
	Unit group: -	Unit selection: -		
	Min	Мах	Factory setting	
	0	184	0	
G120C variants				
Fig. 1-2 Write p	arameter			

Parameter number

Indicates the respective parameter number. The numbers used have four to five digits. Numbers prefixed with an "r" indicate that the parameter is "write-pro-tected" and displays a specific value, but cannot be changed directly by specifying a different value via this parameter number.

All other parameters begin with a "p". The values of these parameters can be changed directly in the range indicated by the "Min" and "Max" settings in the header. If these values have a physical unit, this is shown in the square brackets.

[Index] indicates that the parameter is indexed, and which indices are available.

.0...15 indicates that the parameter has several bits that can be evaluated or connected individually.

G120C variants

Specifies for which G120C variants (communication) the parameter is valid is. If no G120C variant is listed, then the parameter is valid for all variants.

Parameter text (long name / short name)

CI

CO/BO =

Specifies the name of the respective parameter.

Certain parameter names contain the following abbreviated prefixes: BI, BO, CI, CO and BO/CO followed by a colon.

These abbreviations have the following meanings:

CoBo.pdf

BI = $\frac{P9999}{(0)}$		Binector input, i.e. the parameter selects the source of a binary signal
50	-0000	Binector output, i.e. the parameter connects as a binary

- BO r9999 = signal Connector input, i.e. the parameter selects the source of
 - (999:9) an analog signal
- Connector output, i.e. the parameter connects as an anaсо r9999 [99] log signal
 - r9999 Connector/binector output, i.e. the parameter connects r9999 as an analog signal and/or as a binary signal

To be able to use BICO, you require access to the entire parameter list. At this level many new parameter settings are possible, including the BICO functionality. BICO functionality is a different, more flexible way of setting and combining input and output functions.

The BICO System enables complex functions to be programmed. Boolean and mathematical relationships can be set up between inputs (digital, analog, serial, etc.) and outputs (converter current, frequency, analog output, relay, etc.).

With BI and CI parameters, the parameter number is specified at Factory setting with which the parameter is connected. In this case, the Min and Max values only have dashes.

Access level

Indicates the level of user access. Only a freely accessible access level is effective for the parameters. This covers the parameters using the "Access level 1" to "Access level 3". The parameters of the "Access level 4" are service parameters and password-protected.

Introduction to the parameters

Data type

The available data types are listed in Table 1-1.

Table 1-1	Available data types
-----------	----------------------

Character	Meaning
Unsigned8 (U8)	8-bit without sign
Unsigned16 (U16)	16-bit without sign
Unsigned32 (U32)	32-bit without sign
Integer16 (I16)	16-bit integer
Integer32 (I32)	32-bit integer
Floating Point (Float)	Floating-point number

The information on the data type for binector and connector inputs can consist of two specifications (separated by a slash):

- First specification: Data type of the parameter
- Second specification: Data type of the signal source preferably be interconnected (binector or connector outputs)

Depending on the data type of the BICO input parameter (signal sink) and BICO output parameter (signal source), the following combinations are possible when creating BICO interconnections:

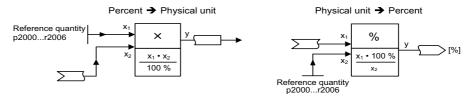

Table 1-2 Possible combinations of	of BICO interconnections
------------------------------------	--------------------------

	BICO input parameter				
		BI parameter			
BICO output parameter	Unsigned32/ Integer16	Unsigned32/ Integer32	Unsigned32/ FloatingPoint32	Unsigned32/ Binary	
CO: Unsigned8	х	х	-	-	
CO: Unsigned16	х	х	-	-	
CO: Unsigned32	х	х	-	-	
CO: Integer16	х	х	r2050	-	
CO: Integer32	х	х	-	-	
CO: FloatingPoint32	х	х	x	-	
BO: Unsigned8	-	_	-	х	
BO: Unsigned16	-	_	-	х	
BO: Unsigned32	-	_	-	х	
BO: Integer16	-	_	-	х	
BO: Integer32	-	-	-	х	
BO: FloatingPoint32	-	_	-	_	
Legend:	x: BICO interconnection permitted				
	-: BICO interconnection not permitted				

Scaling

Specification of the reference variable with which a signal value is automatically converted for a BICO interconnection.

Reference values, corresponding to 100%, are required for the display of physical units as percentages. These reference values are entered in parameters p2000 ... p2006.

In addition to p2000 ... p2006, the following scaling is used:

- PERCENT 1.0 = 100%
- 4000H 4000 hex = 100%

Calculated

Specifies whether the parameter is influenced by automatic calculations.

p0340 determines which calculations are to be performed:

- p0340 = 1 includes the calculations from p0340 = 2, 3, 4, 5.
- p0340 = 2 calculates the motor parameters (p0350 ... p0360, p0625).
- p0340 = 3 includes the calculations from p0340 = 4, 5.
- p0340 = 4 only calculates the controller parameters.
- p0340 = 5 only calculates the controller limits.

Note:

For p3900 > 0, p0340 = 1 is also called automatically.

After p1900 = 1, 2, p0340 = 3 is also called automatically.

Parameters with a reference to p0340 after "Calculated", depend on the Power Module being used and the motor. In this case, the values at "Factory setting" do not correspond to the actual values because these values are calculated during the commissioning. This also applies to the motor parameters. Introduction to the parameters

Can be changed

Converter state in which a parameter can be changed. Three states are possible:

- Commissioning C(x)
- Operation U
- Ready for operation T

The parameter can be changed in these states. One, two or all states can be specified. If all three states are specified, the parameter setting can be changed in all three converter states.

(x) indicates that the parameter can only be changed when p0010 = x.

Data set

Parameters that belong to data sets are identified as follows:

• CDS (Command Data Set)

They are always indexed with [0 ... n] (with n = 0 ... 1 depending on the setting in p0170).

[0] = command data set 0

[1] = command data set 1

DDS (Drive Data Set)

They are always indexed with [0 ... n] (with n = 0).

[0] = drive data set 0

• MDS (Motor Data Set) and PDS (Power Unit Data Set)

They are always indexed with [0 ... n] (with n = 0). The motor data sets and power unit data sets are assigned to the drive data sets, i.e. they are automatically selected with the selection of a drive data set (e.g. drive data set 0 contains motor data set 0 and power unit data set 0).

Data sets can only created and deleted when p0010 = 15 is set.

Unit group and unit selection

For parameters where the unit can be switched, the specifications for "Unit group" and "Unit selection" determine the group to which this parameter belongs and with which parameter the unit can be switched over.

The standard unit of a parameter is specified in square brackets after the values for "Min", "Max", and "Factory setting".

Min

Specifies the lowest value to which the parameter can be set.

Max

Specifies the highest value to which the parameter can be set.

Factory setting

Specifies the default value, i.e. the value that is valid when the user does not specify a value for the parameter (see also "Calculated").

Example:

Unit group: 7_1, unit selection: p0505

The parameter belongs to unit group 7_1 and the unit can be switched over using p0505.

All the potential unit groups and possible unit selections are listed below.

Table 1-3Unit group (p0100)

Unit group	Unit selection for p0100 =			Reference variable
	0	1	2	for %
7_4	Nm	lbf ft	Nm	-
14_6	kW	HP	kW	-
25_1	kgm ²	lb ft ²	kgm ²	-
27_1	kg	lb	kg	-
28_1	Nm/A	lbf ft/A	Nm/A	-

Table I-4 Unit group (pub)	Table 1-4	Unit group (p0505)	
----------------------------	-----------	--------------------	--

Unit group	U	Unit selection for p0505 =			Reference variable
	1	2	3	4	for %
2_1	Hz	%	Hz	%	p2000
3_1	rpm	%	rpm	%	p2000
5_1	Vrms	%	Vrms	%	p2001
5_2	V	%	V	%	p2001
5_3	V	%	V	%	p2001
6_2	Arms	%	Arms	%	p2002
6_5	А	%	А	%	p2002
7_1	Nm	%	lbf ft	%	p2003
7_2	Nm	Nm	lbf ft	lbf ft	-
14_5	kW	%	HP	%	r2004
14_10	kW	kW	HP	HP	-
21_1	°C	°C	°F	°F	-
39_1	1/s ²	%	1/s ²	%	p2007

Introduction to the parameters

Table 1-5Unit group (p0595)

Unit group	Unit selection for p0595 =		Reference variable
	Value Unit		for %
9_1	The values that can be set and the technological units are shown in p0595 (See Section 1.2).		

Description

Explanation of the function of a parameter

Values

List of the possible values of a parameter.

Recommendation

Information about recommended settings.

Index

The name and meaning of each individual index is specified for indexed parameters, except for parameters that belong to a data set (see "Data set").

Bit array

For parameters with bit arrays, the following information is provided about each bit:

- Bit number and signal name
- Meaning with signal states 0 and 1
- Function diagram (FP) (optional). The signal is shown on this function diagram.

Dependency

Conditions that must be fulfilled in conjunction with this parameter. Also includes special effects that can occur between this parameter and others.

1.1.2 Number ranges of parameters

Note:

The following number ranges represent an overview for all of the parameters available for the SINAMICS drive family.

The parameters for the product described in this List Manual are described in detail in Section 1.2.

Parameters are grouped into the following number ranges:

Table 1-6Number ranges for SINAMICS

Range		Description	
From	То		
0000	0099	Display and operation	
0100	0199	Commissioning	
0200	0299	Power unit	
0300	0399	Motor	
0400	0499	Encoder	
0500	0599	Technology and units, motor-specific data, probes	
0600	0699	Thermal monitoring, maximum current, operating hours, motor data, central probe	
0700	0799	Control Unit terminals, measuring sockets	
0800	0839	CDS, DDS data sets, motor changeover	
0840	0879	Sequence control (e.g. signal source for ON/OFF1)	
0880	0899	ESR, parking, control and status words	
0900	0999	PROFIBUS/PROFIdrive	
1000	1199	Setpoint channel (e.g. ramp-function generator)	
1200	1299	Functions (e.g. motor holding brake)	
1300	1399	V/f control	
1400	1799	Control	
1800	1899	Gating unit	
1900	1999	Power unit and motor identification	
2000	2009	Reference values	
2010	2099	Communication (fieldbus)	
2100	2139	Faults and alarms	
2140	2199	Signals and monitoring	
2200	2359	Technology controller	
2360	2399	Staging, hibernation

Parameter list

1.2 Parameter list

Product: SINAMICS G120C, Version: 4502400, Language: eng Objects: G120C_CAN, G120C_DP, G120C_PN, G120C_USS

r0002	Drive operating display / Drv op_display					
	Access level: 2	Calculated: -	Data type: Integer16			
	Can be changed: -	Scaling: -	Data set: -			
	Units group: -	Unit selection: -				
	Min O	Max 200	Factory setting			
Description:	Operating display for the drive.					
Value:	 17: Operation - braking with 18: Operation - brake on faul 19: Operation - DC braking a 21: Ready for operation - set 22: Ready for operation - de- 31: Ready for switching on - 35: Switching on inhibited - c 41: Switching on inhibited - s 42: Switching on inhibited - s 43: Switching on inhibited - s 	etpoint" = "1" set "RFG start" = "1" RFG" = "1" running king with OFF1 using "ON/OFF1" = "1" OFF3 can only be interrupted with OFF2 It, remove fault, acknowledge active (p1230, p1231) : "Operation enable" = "1" (p0852) -magnetizing running (p0347) set "ON/OFF1" = "0/1" (p0840) carry out first commissioning (p0010) set "ON/OFF1" = "0" (p0840) set "OC/OFF2" = "1" (p0844, p0845) set "OC/OFF3" = "1" (p0848, p0849) ectify fault, acknowledge fault, STO exit comm mode (p0010)				
Dependency:	Refer to: r0046	coung				
Notice:	For several missing enable signa	als, the corresponding value with the high	est number is displayed.			
Note:	OC: Operating condition					
	RFG: Ramp-function generator					
	COMM: Commissioning					
	MotID: Motor data identification					
p0003	Access level / Acc_level					
	Access level: 1	Calculated: -	Data type: Integer16			
	Can be changed: C, U, T	Scaling: -	Data set: -			
	Units group: -	Unit selection: -				
	Min 3	Max 4	Factory setting 3			
Description:	Sets the access level to read and	d write parameters.				
/alue:	3: Expert 4: Service					
Note:	Access level 3 (experts):					
	Expert know-how is required for	these parameters (e.g. BICO parameteriz	ration).			
	Access level 4 (service):					
	For these parameters, it is necessary that authorized service personnel enter the appropriate password (p3950).					

	Drive commissioning parameter filter / Drv comm. par_filt				
	Access level: 1	Calculated: -	Data type: Integer16		
	Can be changed: C(1), T	Scaling: -	Data set: -		
	Units group: -	Unit selection: -			
	Min 0	Max 95	Factory setting		
Description:	Sets the parameter filter to com	mission a drive.			
	Setting this parameter filters out	the parameters that can be writte	n into in the various commissioning steps.		
Value: Dependency: Notice: Note:	 0: Ready 1: Quick commissioning 2: Power unit commissioning 3: Motor commissioning 5: Technological application/units 15: Data sets 29: Only Siemens int 30: Parameter reset 39: Only Siemens int 49: Only Siemens int 49: Only Siemens int 95: Safety Integrated commissioning Refer to: r3996 When the parameter is reset to a value of 0, short-term communication interruptions may occur. The drive can only be powered up outside the drive commissioning (inverter enable). To realize this, thi must be set to 0. By setting p3900 to a value other than 0, the quick commissioning is completed, and this parameter is a reset to 0. Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1. Once the Control Unit has been booted up for the first time, the motor parameters suitable for the powebeen defined, and the control parameters have been calculated accordingly, p0010 is automatically resp0010 = 3 is used for the subsequent commissioning of additional drive data sets (creating data sets: s

Parameter list					
Notice:	After the value has been moor r3996. Modifications can be r		s can be made and the status is shown in		
Note:		I are described in the technical docume	ntation of the particular product.		
	The parameter is not influence	ed by setting the factory setting.			
r0018	Control Unit firmware version / CU FW version				
	Access level: 3	Calculated: -	Data type: Unsigned32		
	Can be changed: -	Scaling: -	Data set: -		
	Units group: -	Unit selection: -			
		Max			
	Min 0	Max 4294967295	Factory setting -		
Description:	Displays the firmware versior	n of the Control Unit.			
Dependency:	Refer to: r0197, r0198				
Note:	Example:				
	The value 1010100 should be	e interpreted as V01.01.01.00.			
·0020	Speed setpoint smoot	thed / n_set smth			
	Access level: 2	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: p2000	Data set: -		
	Units group: 3_1	Unit selection: p0505			
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]		
Description:			beed controller or U/f characteristic (after th		
Dependency:	Refer to: r0060				
Note:	Smoothing time constant = 1				
		a process quantity and may only be use			
	The speed setpoint is availab	le smoothed (r0020) and unsmoothed (r0060).		
r0021	CO: Actual speed smo	oothed / n_act smooth			
	Access level: 2	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: p2000	Data set: -		
	Units group: 3_1	Unit selection: p0505			
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]		
Description:	Displays the smoothed actual value of the motor speed.				
	For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output fre quency is shown in r0021.				
Dependency:	Refer to: r0022, r0063				
Note:	Smoothing time constant = 1				
	The signal is not suitable as a process quantity and may only be used as a display quantity.				
	The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).				
	For U/f control, the mechanic slip compensation is deactive		uency and the slip is shown in r0063[2] eve		
	slip compensation is deactive	ited.			

r0022	Speed actual value rpm smoothed / n_act rpm smooth				
	Access level: 3	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: p2000	Data set: -		
	Units group: -	Unit selection: -			
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]		
Descriptions			- [iþin]		
Description:	Displays the smoothed actual value of the motor speed. r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.				
		• •	335), the synchronous speed to the output fre-		
	quency is shown in r0022.				
Dependency:	Refer to: r0021, r0063				
Note:	Smoothing time constant = 1	00 ms			
	•	a process quantity and may only be u			
		ailable smoothed (r0021, r0022) and u			
	For U/f control, the mechanic slip compensation is deactive		equency and the slip is shown in r0063[2] even		
	silp compensation is deactive	neu.			
r0024		oothed / f_outp smooth			
	Access level: 3	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: p2000	Data set: -		
	Units group: -	Unit selection: -			
	Min	Max	Factory setting - [Hz]		
	- [Hz]	- [Hz]	- [112]		
Description:	- [Hz] Displays the smoothed conve		- [112]		
•			- [112]		
Dependency:	Displays the smoothed conve Refer to: r0066 Smoothing time constant = 1	erter frequency. 00 ms			
Description: Dependency: Note:	Displays the smoothed conve Refer to: r0066 Smoothing time constant = 10 The signal is not suitable as a	erter frequency. 00 ms a process quantity and may only be u	sed as a display quantity.		
Dependency:	Displays the smoothed conve Refer to: r0066 Smoothing time constant = 10 The signal is not suitable as a	erter frequency. 00 ms	sed as a display quantity.		
Dependency:	Displays the smoothed conver Refer to: r0066 Smoothing time constant = 10 The signal is not suitable as a The output frequency is avail	erter frequency. 00 ms a process quantity and may only be u	sed as a display quantity.		
Dependency: Note:	Displays the smoothed conver Refer to: r0066 Smoothing time constant = 10 The signal is not suitable as a The output frequency is avail	erter frequency. 00 ms a process quantity and may only be u able smoothed (r0024) and unsmooth	sed as a display quantity.		
Dependency: Note:	Displays the smoothed conver Refer to: r0066 Smoothing time constant = 10 The signal is not suitable as a The output frequency is avail CO: Output voltage sr	erter frequency. 00 ms a process quantity and may only be u able smoothed (r0024) and unsmooth moothed / U_outp smooth	sed as a display quantity. ned (r0066).

Parameters Parameter list Notice: When measuring a DC link voltage < 200 V, for the Power Module a valid measured value is not supplied. In this case, when an external 24 V power supply is connected, a value of approx. 24 V is displayed in the display parameter. Note: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The DC link voltage is available smoothed (r0026) and unsmoothed (r0070). r0026 sets itself to the lower value of the pulsating DC link voltage. r0027 CO: Absolute actual current smoothed / I act abs val smth Access level: 2 Calculated: -Data type: FloatingPoint32 Can be changed: -Scaling: p2002 Data set: -Units group: -Unit selection: -Min Factory setting Max - [Arms] - [Arms] - [Arms] **Description:** Displays the smoothed absolute actual current value. Dependency: Refer to: r0068 This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the Notice: unsmoothed value should be used. Note: Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068). r0028 Modulation depth smoothed / Mod_depth smth Access level: 4 Calculated: -Data type: FloatingPoint32 Can be changed: -Scaling: p2002 Data set: -Units group: -Unit selection: -Min Max **Factory setting** - [%] - [%] - [%] **Description:** Displays the smoothed actual value of the modulation depth. Dependency: Refer to: r0074 Note: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The modulation depth is available smoothed (r0028) and unsmoothed (r0074). r0029 Current actual value field-generating smoothed / ld act smooth Access level: 4 Calculated: -Data type: FloatingPoint32 Can be changed: -Scaling: p2002 Data set: -Units group: -Unit selection: -Min Max **Factory setting** - [Arms] - [Arms] - [Arms] **Description:** Displays the smoothed field-generating actual current. Dependency: Refer to: r0076 Note: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity. The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).

r0031	Actual torque smoothed / M_act smooth				
	Access level: 2	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: p2003	Data set: -		
	Units group: 7_1	Unit selection: p0505			
	Min - [Nm]	Max - [Nm]	Factory setting - [Nm]		
Description: Dependency: Note:	Displays the smoothed torque Refer to: r0080				
NOTE:	-	a process quantity and may only be use le is available smoothed (r0031) and u			
r0032	CO: Active power actual value smoothed / P_actv_act smth				
	Access level: 2	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: r2004	Data set: -		
	Units group: 14_10	Unit selection: p0505			
	Min - [kW]	Max - [kW]	Factory setting - [kW]		
Description:	Displays the smoothed actual	value of the active power.			
Dependency: Notice:	•	uitable for diagnostics or evaluation of	dynamic operations. In this case, the		
Note:	unsmoothed value should be Power delivered at the motor The active power is available		smoothed (r0082).		
r0033	Torque utilization smo	oothed / M_util smooth			
	Access level: 4	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: PERCENT	Data set: -		
	Units group: -	Unit selection: -			
	Min - [%]	Мах - [%]	Factory setting - [%]		
Description: Dependency: Note:	Smoothing time constant = 10 The signal is not suitable as a	ole for vector control. For U/f control r0 00 ms a process quantity and may only be use able smoothed (r0033) and unsmoothe ne following applies: al	ed as a display quantity.		

	For M set total (r0079) <= 0,	the following applies:			
	- Required torque = - M_set 1	0 11			
	- Actual torque limit = - M_set total - Actual torque limit = - M_max lower effective (r1539) For the actual torque limit = 0, the following applies: r0033 = 100 %				
	•), the following applies: $r0033 = 0 \%$			
r0034	CO: Motor utilization	/ Motor utilization			
	Access level: 2	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: PERCENT	Data set: -		
	Units group: -	Unit selection: -			
	Min - [%]	Max - [%]	Factory setting - [%]		
Description:	Displays the motor utilization	from motor temperature model 1 (I2t)	or 3.		
Dependency:	The motor utilization is only o model 1 (I2t) or 3 is activated		hronous motors when the motor temperature		
	For motor temperature mode	l 1 (I2t) (p0612.0 = 1), the following app	olies:		
	- r0034 = (motor model temperature - 40 K) / (p0605 - 40 K) * 100 %				
	For motor temperature model 3 (p0612.2 = 1), the following applies:				
	- r0034 = (motor model temperature - p0613) / (p5390 - p0613) * 100 %				
	Refer to: p0611, p0615				
Notice:		•	tor temperature with an assumed model value		
Note:	Smoothing time constant = 1	r the motor utilization is only valid after			
Note.	U U	a process quantity and may only be use	ed as a display quantity		
	For r0034 = -200.0 %, the fol		cu as a display quantity.		
		• • • •	ed or has been incorrectly parameterized).		
r0035	CO: Motor temperatu	re / Mot temp			
	Access level: 2	Calculated: -	Data type: FloatingPoint32		
	Can be changed: -	Scaling: p2006	Data set: -		
	Units group: 21_1	Unit selection: p0505			
	Min	Max	Factory setting		
	- [°C]	- [°C]	- [°C]		
Description:	Displays the actual temperat				
lote:	For r0035 not equal to -200.0	• • • •			
	- this temperature display is				
	- a KTY sensor is connected.				
	- for induction motors, the thermal motor model is activated ($p0601 = 0$).				
	For r0035 equal to -200.0 °C	• • •			
	- this temperature display is not valid (temperature sensor error).				
	- A PTC sensor or bimetallic	INC CONTACT IS CONNECTED.			

- for synchronous motors, the thermal motor model is activated (p0601 = 0).

r0036	CO: Power unit overlo	oad I2t / PU overload I2t	
	Access level: 3	Calculated: -	Data type: FloatingPoint32
	Can be changed: -	Scaling: PERCENT	Data set: -
	Units group: -	Unit selection: -	
	Min - [%]	Max - [%]	Factory setting - [%]
Description:	A current reference value is c conducted by the power unit of the capacitors, inductances If the I2t reference current of	without any influence of the switching lo	ver unit. It represents the current that can be isses (e.g. the continuously permissible curre n overload (0 %) is not displayed.
Dependency:	Refer to: F30005		
0037[019]	CO: Power unit tempe	eratures / PU temperatures	
	Access level: 4	Calculated: -	Data type: FloatingPoint32

	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]

Index:	[0] = Unsmoothed		
Dependency:	[1] = Smoothed with p0045 Refer to: r0027		
Notice:		current controller sampling time.	
Note:	Absolute current value = sqrt		
NOLE.	The absolute value of the cur		l (r0027 with 300 ms, r0068[1] with p0045) and
	unsmoothed (r0068[0]).		
r0069[06]	CO: Phase current act	tual value / I_phase act value	
	Access level: 4	Calculated: -	Data type: FloatingPoint32
	Can be changed: -	Scaling: p2002	Data set: -
	Units group: 6_5	Unit selection: p0505	
	Min - [A]	Max - [A]	Factory setting - [A]
Description:	Displays the measured actua	l phase currents as peak value.	
Index:	[0] = Phase U [1] = Phase V [2] = Phase W [3] = Phase U offset [4] = Phase V offset [5] = Phase W offset [6] = Total U, V, W		
Note:	In indices 3 5, the offset cu	rrents of the 3 phases, which are adde hase currents is displayed in index 6.	d to correct the phase currents, are displayed.
r0070	CO: Actual DC link vo	Itage / Vdc act val	
	Access level: 3	Calculated: -	Data type: FloatingPoint32
	Can be changed: -	Scaling: p2001	Data set: -
	Units group: 5_2	Unit selection: p0505	
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the measured actua	I value of the DC link voltage.	
Dependency:	Refer to: r0026	-	
Notice:			valid measured value is not supplied. In this approx. 24 V is displayed in the display param-
Note:	The DC link voltage is available	ble smoothed (r0026) and unsmoothed	(r0070).
r0071	Maximum output volta	age / U_output max	
	Access level: 3	Calculated: -	Data type: FloatingPoint32
	Can be changed: -	Scaling: p2001	Data set: -
	Units group: 5_1	Unit selection: p0505	
	Min - [Vrms]	Max - [Vrms]	Factory setting - [Vrms]
Description:	Displays the maximum output	t voltage.	
Dependency:	The maximum output voltage (p1803).	depends on the actual DC link voltage	(r0070) and the maximum modulation depth
Note:	As the (driven) motor load inc age.	reases, the maximum output voltage d	rops as a result of the reduction in DC link volt-

Parameters

Parameter list

r0072	CO: Output voltage /	U_output	
	Access level: 3	Calculated: -	Data type: FloatingPoint32
	Can be changed: -	Scaling: p2001	Data set: -
	Units group: 5_1	Unit selection: p0505	
	Min - [Vrms]	Max - [Vrms]	Factory setting - [Vrms]
Description: Dependency:	Displays the actual output vo Refer to: r0025	Itage of the power unit.	
Note:	The output voltage is availab	le smoothed (r0025) and unsmoothed (r	0072).
r0073	Maximum modulation	depth / Modulat_depth max

•	Access level: 4 Can be changed: - Units group: 7_1 Min - [Nm] Displays the actual torque val [0] = Unsmoothed	Calculated: - Scaling: p2003 Unit selection: p0505 Max - [Nm]	Data set: - Factory setting	
Description: Index: Dependency:	Access level: 4 Can be changed: - Units group: 7_1 Min - [Nm] Displays the actual torque val	Calculated: - Scaling: p2003 Unit selection: p0505 Max - [Nm]	Data set: - Factory setting	

r0081	CO: Torque utilization / M_Utilization			
	Access level: 4	Calculated: -	Data type: FloatingPoint32	
	Can be changed: -	Scaling: PERCENT	Data set: -	
	Units group: -	Unit selection: -		
	Min - [%]	Мах - [%]	Factory setting - [%]	
Description:	Displays the torque utilization as a	a percentage.		
	The torque utilization is obtained f	from the required smoothed torque	e referred to the torque limit.	
Dependency:	This parameter is only available for vector control. For U/f control r0081 = 0 %. Refer to: r0033			
Note:	The torque utilization is available	smoothed (r0033) and unsmoothe	d (r0081).	
	The torque utilization is obtained f	from the required torque referred to	o the torque limit as follows:	
	- Positive torque: r0081 = (r0079 /	′ r1538) * 100 %		
	- Negative torque: r0081 = (-r0079	9 / -r1539) * 100 %		
r0082[02]	CO: Active power actual	value / P_act		
	Access level: 4	Calculated: -	Data type: FloatingPoint32	
	Can be changed: -	Scaling: r2004	Data set: -	
	Units group: 14_5 Unit selection: p0505			
	Min - [kW]	Max - [kW]	Factory setting - [kW]	
Description:	Displays the instantaneous active	power.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045 [2] = Electric power			
Dependency:	Refer to: r0032			
Note:	The mechanical active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmo (r0082[0]).			
r0083	CO: Flux setpoint / Flex setp			
	Access level: 4	Calculated: -	Data type: FloatingPoint32	
	Can be changed: -	Scaling: PERCENT	Data set: -	
	Units group: -	Unit selection: -		
	Min - [%]	Мах - [%]	Factory setting - [%]	
Description:	Displays the flux setpoint.			
r0084[01]	CO: Flux actual value / Flux act val

r0289	CO: Maximum power unit output current / PU I_outp max					
	Access level: 3	Calculated: -	Data type: FloatingPoint32			
	Can be changed: -	Scaling: p2002	Data set: -			
	Units group: -	Unit selection: -				
	Min	Max	Factory setting			
	- [Arms]	- [Arms]	- [Arms]			
Description:	Displays the actual maximum of	output current of the power unit takin	ng into account derating factors.			
p0290	Power unit overload response / PU overld response					
	Access level: 3	Calculated: -	Data type: Integer16			
	Can be changed: ⊺	Scaling: -	Data set: -			
	Units group: -	Unit selection: -				
	Min O	Max 3	Factory setting 2			
Description:	Sets the response to a thermal	overload condition of the power un	it.			
	The following quantities can re	sult in a response to thermal overlo	ad:			
	- heat sink temperature (r0037	0)				
	- chip temperature (r0037.1)					
	- power unit overload I2T (r003	,				
	Possible measures to avoid thermal overload:					
	- reduce the output current limit r0289 and r0067 or the output frequency (for U/f control) indirectly via the output					
	- reduce the pulse frequency.	current limit and the intervention of the current limiting controller).				
	A reduction, if parameterized, is always realized after an appropriate alarm is output.					
Value:	0: Reduce output current or output frequency					
	1: No reduction, shutdown when overload threshold is reached					
	 Reduce I_output or f_output and f_pulse (not using I2t) Reduce the pulse frequency (not using I2t) 					
Dependency:						
Dependency.	If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only responses can be selected without pulse frequency reduction (p0290 = 0, 1).					
	If a fault or alarm is present, then r2135.13 or r2135.15 is set.					
	Refer to: r0036, r0037, p0230, r2135					
	Refer to: A05000, A05001, A0	7805				
Caution:			by the actions taken, the drive is always shut tive of the setting of this parameter.			
Note:	The setting p0290 = 0, 2 is only practical if the load decreases with decreasing speed (e.g. for applications with vari able torque such as for pumps and fans).					
	Under overload conditions, if the current and torque limits are reduced, and therefore the motor is braked, then for bidden speed ranges (e.g. minimum speed and suppression [skip] speeds) can also be passed through.					
	For p0290 = 2, 3, the I2t overload detection of the power unit does not influence the responses.					
	When the motor data identifica	tion routine is selected, p0290 cann	ot be changed.			
p0292[01]	Power unit temperature alarm threshold / PU T_alrm thresh

	- For induction motors				
	- When vector control is active (see p1300)				
	- If a temperature sensor (KTY) has not been connected				
	- When the motor is at a standstill when switched on				
	When a flying restart is performed on a rotating motor, the temperatures of the thermal motor model are set to a third of the overtemperatures. This occurs only once, however, when the CU is booted (e.g. after a power failure).				
	If identification is activated, the magnetizing time is determined via p0622 and not via p0346. The speed is enabled after completion of the measurement.				
p0622[0n]	Motor excitation time for	r Rs_ident after powering u	p again / t_excit Rs_id		
	Access level: 4	Calculated: p0340 = 1,3	Data type: FloatingPoint32		
	Can be changed: C(3), U, T	Scaling: -	Data set: MDS		
	Units group: -	Unit selection: -			
	Min 0.000 [s]	Max 20.000 [s]	Factory setting 0.000 [s]		
Description:	Sets the excitation time of the m	notor for the stator resistance identific	ation after powering up again (restart).		
Dependency:	Refer to: p0621, r0623				
Note:	For p0622 < p0346 the following	g applies:			
		ime in p0346 has elapsed (see r0056	322. The speed is enabled after measurement s bit 4). The time taken for measurement also		

		ed to the magnetizing time p0346, s fication. The entire measurement pe	to that p0346 represents the maximum possi- riod (magnetizing plus measurement settling
r0623	Stator resistance of Rs id	entification after powering	up again / R_stator Rs-Id
	Access level: 4	Calculated: -	Data type: FloatingPoint32
	Can be changed: -	Scaling: -	Data set: -
	Units group: -	Unit selection: -

Description:	Sets the transfer direction an	d start of data transfer between the	memory card and non-volatile device memory.		
·	Example 1:				
		e transferred from the device mem the memory card with setting 22.	ory to the memory card with setting 0. The parame-		
	p0802 = 22 (parameter back	up stored on memory card as targe	t with setting 22)		
	p0803 = 0 (parameter backu	o stored in device memory as sourc	e with setting 0)		
	p0804 = 2 (start data transfer	from device memory to memory ca	ard)		
		rred from device memory to memor	y card and stored as PS022xxx.ACX.		
	Example 2:				
		the device memory as setting 0.	d to the device memory with setting 22. The param-		
		up stored on memory card as sourc	- /		
		o stored in device memory as targe	3 <i>i</i>		
		from memory card to device memory			
	> PS022xxx.ACX is transferred from memory card to device memory and stored as PS000xxx.ACX.				
	Example 3 (only supported for PROFIBUS/PROFINET):				
	The PROFIBUS or PROFINET device master data (GSD) should be transferred from the device memory to the				
	memory card. p0802 = (not relevant)				
	p0802 = (not relevant) p0803 = (not relevant)				
	,	the GSD files to the memory card)			
		• •			
	> The GSD files are transferred from the device memory to the memory card and stored in the /SIEMENS/SIN- AMICS/DATA/CFG directory.				
Value:	0: Inactive				
	1: Memory card to devic				
	2: Device memory to me				
	1001: File on memory card 1002: File in device memory	•			
	1003: Memory card not four	•			
	1100: File cannot be transfe	erred			
Dependency:	Refer to: p0802, p0803				
Notice:	•	e removed while data is being trans	sferred.		
	For p0014 = 1, the following applies:				
			ations can be made and the status is shown in		
Note:	r3996. Modifications can be made again when r3996 = 0.				
NOCE.	If a parameter backup with setting 0 is detected on the memory card when the Control Unit is switched on (PS000xxx.ACX), this is transferred automatically to the device memory.				
	When the memory card is inserted, a parameter backup with setting 0 (PS000xxx.ACX) is automatically written to the memory card when the parameters are saved in a non-volatile memory (e.g. by means of "Copy RAM to ROM")				
	Once the data has been successfully transferred, this parameter is automatically reset to 0. If an error occurs, the parameter is set to a value > 1000. Possible fault causes: p0804 = 1001:				
	The parameter backup set in ory space available on the m	•	y card does not exist or there is not sufficient mem-		
	p0804 = 1002:				
	The parameter backup set in memory space available in the		memory does not exist or there is not sufficient		

p0804 = 1003: No memory card has been inserted.

	0	300	0			
Description:	The parameter is used to initiate	the reset of the drive parameters	S.			
	Parameters p0100, p0205 are not reset.					
	The following motor parameters a					
	• •	1, 12, the buffer memory mode	is automatically deactivated (p0014 = 0).			
Value:	0: Inactive 1: Start a parameter reset					
	1: Start a parameter reset 3: Start dnload of volatile pa	rameters from RAM				
	5: Starts a safety parameter					
	10: Starts to download setting					
	11: Starts to download setting	g 11				
	12: Starts to download setting	-				
	100: Start a BICO interconnec 300: Only Siemens int	tion reset				
Dependency:	Refer to: F01659					
Caution:		(see n0014) the actual naram	eters are backed up from RAM to ROM when a			
Saution.	parameter set is loaded (p0970 =	, .				
Notice:	After the value has been modified r3996. Modifications can be mad	-	tions can be made and the status is shown in			
	Peculiarities of communication vi	U U				
	- Communication with Class 1 ma		errupted.			
	- Communication with Class 2 ma					
Note:	A factory setting run can only be					
		•	rameter reset has been completed if p0970 and			
	For p0970 = 1 the following appli	es:				
	If a Safety Integrated function is parameterized (p9601), then the safety parameters are not reset. In this case, an error message (F01659) is output with fault value 2.					
	The following generally applies:					
	One index of parameters p2100, p2101, p2126, p2127 is not reset, if a parameterized message is precisely active in this index.					
p0971	Save parameters / Save	oar				
	Access level: 1	Calculated: -	Data type: Unsigned16			
	Can be changed: ∪, T	Scaling: -	Data set: -			
	Units group: -	Unit selection: -				
	Min 0	Max 12	Factory setting 0			
Description:	Setting to save parameters in the	non-volatile memorv				
Value:	Setting to save parameters in the non-volatile memory. 0: Inactive					
	1: Save drive object					
	10: Save in non-volatile mem					
	11: Save in non-volatile mem					
	12: Save in non-volatile mem	ory as setting 12				
Dependency:	Refer to: p1960, r3996					
Caution:	If a memory card (optional) is ins	÷				
	The parameters are also saved o	in the card and therefore overwr	ite any existing data!			

Caution:	The Control Unit power supply may only be powered down after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).				
Notice:	Writing to parameters is inhibited while saving.				
	The progress while saving is displayed in r3996.				
p0972	Drive unit reset / Drv_u	nit reset			
	Access level: 3	Calculated: -	Data type: Unsigned16		
	Can be changed: U, T	Scaling: -	Data set: -		
	Units group: -	Unit selection: -			
	Min 0	Max 3	Factory setting		
Description:	Sets the required procedure to	execute a hardware reset for the	drive unit.		
Value:	0: Inactive				
	1: Hardware-Reset immed	diate			
	2: Hardware reset prepara				
_		clic communication has failed			
Danger:	•	hat the system is in a safe condition			
	The memory card/device memory	ory of the Control Unit must not be	accessed.		
Note:	If value = 1:				
	Reset is immediately executed	and communications interrupted.			
	After communications have bee	en established, check the reset op	eration (refer below).		
	If value = 2:				
	Help to check the reset operation.				
	Firstly, set p0972 = 2 and then read back. Secondly, set p0972 = 1 (it is possible that this request is possibly no lon				
	ger acknowledged). The comm	unication is then interrupted.			
	After communications have been	en established, check the reset op	eration (refer below).		
	If value = 3:				
	The reset is executed after interrupting cyclic communication. This setting is used to implement a synchronized reset by a control for several drive units.				
	If cyclic communication is not a	ctive, then the reset is immediatel	y executed.		
	After communications have bee	en established, check the reset op	eration (refer below).		
	To check the reset operation:				
	After the drive unit has been restarted and communications have been established, read p0972 and check the fol- lowing:				
	p0972 = 0?> The reset was successfully executed.				
	p0972 > 0?> The reset was r	not executed.

	04 Ramp-function generator	•	Yes	No	-	
Notice: Note:	For p0014 = 1, the following ap After the value has been modifi r3996. Modifications can be ma Re bit 00:	ed, no further para		ns can be made and the status	s is shown in	
	0: The setpoint for the motorize	d potentiometer is	not saved and after	er ON is entered using p1040.		
	1: The setpoint for the motorize save in a non-volatile fashion, b	d potentiometer is	saved after OFF a	• ·		
	Re bit 01:					
	0: Without ramp-function generator in the automatic mode (ramp-up/ramp-down time = 0).					
	1: With ramp-function generator in the automatic mode.					
	For manual operation, the ramp-function generator is always active.					
	Re bit 02:					
	0: Without initial rounding-off					
	1: With initial rounding-off. The s a sensitive way of specifying sn	nall changes (prog	ressive reaction w	hen keys are pressed).	-	
	The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximun speed (p1082). It is calculated as follows: $r = 0.01 \% * p1082 [1/s] / 0.13^2 [s^2]$					
	The jerk acts up until the maximum acceleration is reached (a_max = p1082 [1/s] / p1047 [s]), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p1047 is), the longer the ramp-up time increases with respect to the set ramp-up time. Re bit 03:					
	Re bit 03: 0: Non-volatile data save de-activated.					
	1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for bit $00 = 1$).					
	Re bit 04:					
	When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r1050.

Dependency: Notice: Note:	This value is not undershot in operation. Refer to: p1106 The effective minimum speed is formed from p1080 and p1106. The parameter value applies for both motor directions. In exceptional cases, the motor can operate below this value (e.g. when reversing).		
p1082[0n]	Maximum speed / n_ma	x	
	Access level: 1	Calculated: p0340 = 1	Data type: FloatingPoint32
	Can be changed: C(1), T	Scaling: -	Data set: DDS, p0180
	Units group: 3_1	Unit selection: p0505	
	Min 0.000 [rpm]	Max 210000.000 [rpm]	Factory setting 1500.000 [rpm]
Description:	Sets the highest possible speed		
Dependency:	reduction in r1084. p1082 is not changed over.	changed in this process due to the fa	x 500 μ s x r0313). This can be identified by a act that the operating mode p1300 can be
	to the maximum permissible filte	r output frequency (refer to the filter	a the maximum speed is limited corresponding data sheet). When using sine-wave filters sonant frequency of the filter capacitance and
	For reactors and dU/dt filters, it i	s limited to 120 Hz / r0313.	
	Refer to: p0230, p0322		
Notice:	After the value has been modified r3996. Modifications can be made		s can be made and the status is shown in
Note:	The parameter applies for both motor directions. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).		
	Since the parameter is part of quick commissioning (p0010 = 1), it is defined appropriately when p0310, p0311, and p0322 are changed.		
	The following limits are always effective for p1082:		
		0310, 650 Hz) / pole pair number	
	p1082 <= 60 x maximum power unit pulse frequency / (k x pole pair number), with k = 12 (vector control), k = 6.5 (U/f control)		
	If a sine-wave filter (p0230 = 3) is parameterized as output filter, then the maximum speed is limited corresponding to the maximum permissible filter output frequency (refer to the filter data sheet). For reactors and dU/dt filters, it is limited to 120 Hz / pole pair number.		
	During automatic calculation ($p0340 = 1$, $p3900 > 0$), the parameter value is assigned the maximum motor speed ($p0322$). If $p0322 = 0$, the rated motor speed ($p0311$) is used as default (pre-assignment) value. For induction motors, the synchronous no-load speed is used as the default value ($p0310 \times 60$ / pole pair number).		
	For synchronous motors, the following additionally applies:		
	During automatic calculation (p0340, p3900), p1082 is limited to speeds where the EMF does not exceed the DC link voltage.		
	p1082 is also available in the qu value is not changed.	ick commissioning (p0010 = 1); this	means that when exiting via p3900 > 0, the
			\pm 500 μs x pole pair number). This can be idenue to the fact that the operating mode p1300
			84 is limited to 70% of the resonant frequency

Description:	Sets the bandwidth for the skip			
Dependency:	Refer to: p1091, p1092	• •		
Note:	The setpoint (reference) speed	ls are skipped (suppressed) in the ran	ge of the skip speed +/-p1101.	
	Steady-state operation is not possible in the skipped (suppressed) speed range. The skip (suppression) range is skipped.			
	Example:			
	p1091 = 600 and $p1101 = 20$			
	> setpoint speeds between 580 and 620 [rpm] are skipped. For the skip bandwidths, the following hysteresis behavior applies:			
	For a setpoint speed coming from below, the following applies:			
	r1170 < 580 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm]> r1119 = 580 [rpm]			
	For a setpoint speed coming from above, the following applies:			
		m] <= r1114 <= 620 [rpm]> r1119 =	620 [rpm]	
p1106[0n]	CI: Minimum speed signal source / n_min s_src

	Ramp-function generator rounding-off type / RFG round-off type				
	Access level: 2	Calculated: -	Data type: Integer16		
	Can be changed: U, T	Scaling: -	Data set: DDS, p0180		
	Units group: -	Unit selection: -			
	Min 0	Max 1	Factory setting		
Description:	Sets the smoothed response to the OFF1 command or the reduced setpoint for the extended ramp-function gener ator.				
Value:	0: Cont. smoothing 1: Discont smoothing				
Dependency:	No effect up to initial rounding-off	time (p1130) > 0 s.			
Note:	p1134 = 0 (continuous smoothing	,,			
	If the setpoint is reduced while ramping-up, initially a final rounding-off is carried out and then the rampleted. During the final rounding-off, the output of the ramp-function generator continues to go in the dimprevious setpoint (overshoot). After the final rounding-off has been completed, the output goes toward point. p1134 = 1 (discontinuous smoothing) If the setpoint is reduced while ramping-up, then the output goes immediately in the direction of the net For the setpoint change there is no rounding-off.

p1213[01]	Automatic restart, mon	itoring time / AR t_monit			
	Access level: 3	Calculated: -	Data type: FloatingPoint32		
	Can be changed: ∪, ⊤	Scaling: -	Data set: -		
	Units group: -	Unit selection: -			
	Min 0.0 [s]	Max 10000.0 [s]	Factory setting [0] 60.0 [s] [1] 0.0 [s]		
Description:	Sets the monitoring time of the	automatic restart (AR).			
Index:	[0] = Restart [1] = Reset start counter				
Dependency:	Refer to: p1210				
Caution:	·	made in the state "initialization" a			
Notice:	After fault F07320 occurs, the p automatic restart function is re-		rawn and all of the faults acknowledged so that the		
Note:	Index 0:				
	The monitoring time starts when the faults are detected. If the automatic acknowledgements are not successful, the monitoring time runs again. If, after the monitoring time has expired, the drive has still not successfully started again (flying restart and magnetizing of the motor must have been completed: r0056.4 = 1), then fault F07320 is output.				
	The monitoring is de-activated with $p1213 = 0$. If $p1213$ is set lower than the sum of $p1212$, the magnetizing time $p0346$ and the additional delay time due to the flying restart, then fault F07320 is generated at each restart. If, for $p1210 = 1$, the time in $p1213$ is set lower than in $p1212$, then fault F07320 is also generated at each restart.				
	The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowl- edged (e.g. for faults that are permanently present).				
	In the case of p1210 = 14, 16, the faults which are present must be acknowledged manually within the time in p1213[0]. Otherwise, fault F07320 is generated after the set time. Index 1:				
	The start counter is only reset to the starting value p1211 if, after successful restart, the time in p1213[1]. The delay time is not effective for fault acknowledgement without automatic restart (p1210 = 1). After a power failure (black- out) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the power-on command is withdrawn and the fault is acknowledged.				
	The start counter is immediatel	y updated if the starting value p12	211 or the mode p1210 is changed.		
	The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed. For p1210 = 26, the fault must have been successfully acknowledged and the switch-on command issued within the time in p1213[0]. Otherwise, fault F07320 is generated after the set time.

	Min 0	Max 14	Factory setting 0		
Description:	Setting to activate DC braking.				
/alue:	 0: No function 4: DC braking 5: DC braking for OFF1/O 14: DC braking below starting 				
Dependency:	Refer to: p0300, p1232, p1233	, p1234, r1239			
Note:	Re p1231 = 4:				
	The function is activated as so	on as the activation criterion is fulfille	ed.		
	- the function can be supersede	ed by an OFF2 response.			
	Activation criterion (one of the	following criteria is fulfilled):			
	 binector input p1230 = 1 signa 	al (DC braking activation).			
	- the drive is not in the state "S	4: Operation" or in "S5x" (refer to fu	nction diagram 2610).		
	- the internal pulse enable is m	issing (r0046.19 = 0).			
	The function can only be used	for induction motors (p0300 = 1).			
	u i	awn (p1231 = 0) if it is not being use	d as a fault response in p2101.		
	Re p1231 = 5:				
	DC braking can only be set for induction motors. DC braking is activated if the OFF1 or OFF3 command is present. Binector input p1230 is ineffective. If the drive				
	off. If, at OFF1, the drive speed	is below p1234, then it is immediate operation if the OFF1 command is w	ne set in p1233. After this, the drive is switche ely demagnetized and switched into DC braking vithdrawn prematurely. Flying restart must be		
		esponse continues to be possible.			
	Re p1231 = 14:				
	In addition to the function for p1231 = 5, binector input p1230 is evaluated.				
	DC braking is only automatically activated when the speed threshold p1234 is fallen below if binector input p1230 1 signal. Notice:				
	This is also the case, if no OFF command is present. After demagnetization and after the time in p1233 has expired the drive changes back into normal operation or is switched-off (for OFF1/OFF3).				
	If a 0 signal is applied to binector input p1230, for OFF1 and OFF3 no DC braking is executed. Note:

	0.0 [%]	600.0 [%]	0.0 [%]			
Description:		Sets the setpoint for slip compensation in [%] referred to r0330 (motor rated slip).				
	p1335 = 0.0 %: Slip compensat					
Dependency:	p1335 = 100.0 %: The slip is co		precise motor parameters (p0350 p0360)			
Dependency.		ely known, a precise compensation can				
	For U/f control types with Eco optimization (4 and 7), the slip compensation must be activated in correct operation.					
Note:	The purpose of slip compensati	on is to maintain a constant motor spee with increasing load is a typical charac	d regardless of the applied load. The fact terristic of induction motors.			
	For synchronous motors, this e	ffect does not occur and the parameter	has no effect in this case.			
	For the open-loop control mode order to be able to precisely set	,	lip compensation is internally disabled in			
	If p1335 is changed during commissioning (p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1335 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).					
p1336[0n]	Slip compensation limit value / Slip comp lim val					
	Access level: 3	Calculated: -	Data type: FloatingPoint32

	Min 2.000 [kHz]	Max 16.000 [kHz]	Factory setting 4.000 [kHz]		
Description:	Sets the pulse frequency for th	le converter.			
	This parameter is pre-set to the	e rated converter value when the drive is	s first commissioned.		
Dependency:	Refer to: p0230				
Note:	The maximum possible pulse frequency is also determined by the power unit being used.				
	When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067).				
	If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be set below the minimum value required for the filter.				
	For operation with output reactors, the pulse frequency is limited to 4 kHz (see p0230).				
	If p1800 is changed during commissioning (p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

	p1300 < 20 (U/f open-loop cor	itrol): ing measurement or speed controlle	or optimization		
	p1300 = 20, 22 (encoderless operation): Only rotating measurement or speed controller optimization can be selected in the encoderless mode.				
Value:	0: Inhibited				
	-	in encoderless operation			
Dependency		ization in encoderless operation	ntification routing (n1000, n1010, r2025) should		
Dependency:	Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.				
		easurement, the drive data set char	geover is suppressed.		
	Refer to: p1300, p1900, p1959)			
Danger:		•	d, it must be ensured that this is not reached dur-		
	ing the rotating measurement.	If this is not the case, then it is not	permissible that the measurement is carried out.		
	l f the sure for the state of the station of the state				
Notice:	Ŭ	te, it must be open (p1215 = 2).	od in a non volatila fachian (n0071)		
Note:	To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971). When the rotating measurement is activated, it is not possible to save the parameters (p0971).				
	Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to				
	the end of the measurement, and if no faults are present, no manual changes should be made.				
	The ramp-up and ramp-down	times (p1120, p1121) are limited, fo	r the rotating measurement, to 900 s.		
p1961	Saturation characteris	tic speed to determine / Sa	t_char n determ

	Access level: 2	Calculated: p0340 = 1	Data type: FloatingPoint32	
	Can be changed: ⊤	Scaling: -	Data set: -	
	Units group: -	Unit selection: -		
	Min	Мах	Factory setting	
	6.00 [rpm]	210000.00 [rpm]	1500.00 [rpm]	
Description:	Sets the reference quantity fo	r speed and frequency.		
	All speeds or frequencies spe	cified as relative value are referred to the	nis reference quantity.	
	The reference quantity corres	ponds to 100% or 4000 hex (word) or 4	000 0000 hex (double word).	
	The following applies: Referen	nce frequency (in Hz) = reference speed	d (in ((rpm) / 60) x pole pair number)	
Dependency:	This parameter is only updated during the automatic calculation (p0340 = 1, p3900 > 0) if motor carried out beforehand for drive data set zero. This means that the parameter is not locked aguing p0573 = 1.			
	Refer to: p2001, p2002, p200	3, r2004, r3996		
Notice:	When the reference speed / re	eference frequency is changed, short-te	erm communication interruptions may occur.	
Note:	If a BICO interconnection is ea ties are used as internal conve Example 1:		uantities, then the particular reference quanti-	
	The signal of an analog input	(e.g. r0755[0]) is connected to a speed onverted into the absolute speed setpoir	setpoint (e.g. p1070[0]). The actual percent- nt using the reference speed (p2000).	
	Example 2:			
	The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).			
p2001	Reference voltage / Reference voltage			
	Access level: 3	Calculated: p0340 = 1	Data type: FloatingPoint32	
	Can be changed: ⊤	Scaling: -	Data set: -	
	Units group: -	Unit selection: -		
	Min	Мах	Factory setting	
	10 [Vrms]	100000 [Vrms]	1000 [Vrms]	
Description:	Sets the reference quantity fo			
	1 5	ve value are referred to this reference q	uantity. This also applies for direct voltage va	
		ponds to 100% or 4000 hex (word) or 4	000 0000 hex (double word).	
	Note: This reference quantity also a value.	pplies to direct voltage values. It is not i	interpreted as rms value, but as DC voltage	
Dependency:	p2001 is only updated during a		0 > 0) if motor commissioning has been carried neter has not been blocked by setting p0573 =	
	Refer to: r3996			
lotice:		changed, short-term communication in	terruptions may occur.	
Note:		stablished between different physical qu	uantities, then the particular reference quanti	
	For infeed units, the parameter	erized device supply voltage (p0210) is	pre-assigned as the reference quantity.	
	Example:			

p2002	Reference current / I_I	ref		
-	Access level: 3	Calculated: p0340 = 1	Data type: FloatingPoint32	
	Can be changed: ⊺	Scaling: -	Data set: -	
	Units group: -	Unit selection: -		
	Min 0.10 [Arms]	Max 100000.00 [Arms]	Factory setting 100.00 [Arms]	
Description:	Sets the reference quantity fo	r currents.		
	All currents specified as relati	ve value are referred to this reference of	juantity.	
	1 2	ponds to 100% or 4000 hex (word) or 4	()	
Dependency:	. , , , ,	o (1	40 = 1, p3900 > 0) if motor commissioning was arameter is not locked against overwriting	
Notice:	If various DDS are used with	different motor data, then the reference The resulting conversion factor must be	quantities remain the same as these are not taken into account.	
	Example:			
	p2002 = 100 A			
	Reference quantity 100 A cor p0305[0] = 100 A	responds to 100 %		
		r MDS0 in DDS0> 100 % corresponds	s to 100 % of the rated motor current	
	Rated motor current 50 A for MDS1 in DDS1> 100 % corresponds to 200 % of the rated motor current			
		changed, short-term communication in		
lote:	If a BICO interconnection is established between different physical quantities, then the particular reference quanti- ties are used as internal conversion factor.			
	For infeed units, the rated line current, which is obtained from the rated power and parameterized rated line supply voltage (p2002 = r0206 / p0210 / 1.73) is pre-assigned as the reference quantity. Example:			
	The actual value of a phase c		socket (e.g. p0771[0]). The actual current nt (p2002) and output according to the param	
p2003	Reference torque / M_ref

	02 Initial rounding-off active	Yes	No	-		
	03 Non-volatile data save active 1	e for p2230.0 = Yes	No	-		
	04 Ramp-function generator alw	vays active Yes	No	-		
Dependency:	Refer to: r2231, p2240					
Notice:	For $p0014 = 1$, the following applied					
	After the value has been modified, r3996. Modifications can be made		ns can be made and the status	is shown in		
Note:	Re bit 00:					
	0: The setpoint for the motorized p	ootentiometer is not saved and aft	er ON is entered using p2240.			
	1: The setpoint for the motorized p	ootentiometer is saved and after C	N is entered using r2231. In or	der to save in		

	Re bit 02:					
	 0: Without initial rounding-off 1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for initial rounding is independent of the ramp-up time and only depends on the selected maximum value (p2237). It is calculated as follows: r = 0.0001 x max(p2237, p2238) [%] / 0.13^2 [s^2] The jerk is effective until the maximum acceleration is reached (a_max = p2237 [%] / p2247 [s] or a_max = p2238 					
	[%] / p2248 [s]), after which th	[%] / p2248 [s]), after which the drive continues to run linearly with constant acceleration. The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.				
	Re bit 03:					
	0: Non-volatile data save de-a					
	•	ed potentiometer is saved in a non-	volatile fashion (for p2230.0 = 1).			
	Re bit 04:					
	When the bit is set, the ramp-f value of the motorized potention	2 .	pendent of the pulse enable. The actual output

Description:	Sets the integral time (I compo	nent, integrating time constant) of the	technology controller.		
Notice:	The following applies for p225				
	If the output of the technology controller lies within the range of a suppression (skip) bandwidth (p p1101) or below the minimum speed (p1080), the integral component of the controller is held so temporarily works as a P controller. This is necessary in order to prevent the controller from behave manner, as the ramp-function generator switches to the parameterized up and down ramps (p11) same time in order to avoid setpoint steps. This state can be exited or avoided by changing the co by using the start speed (= minimum speed).				
Note:	When the controller output reaches the limit, the I component of the controller is held.				
	p2285 = 0:				
	The integral time is disabled and the I component of the controller is reset.

Description:		250.00 [%] sed to define the amount of DC curre	0.00 [%] ent that is produced on stoppin	ng the motor dur	
		nposition of the DC brake function wi	•		
	Compound braking is a superimposition of the DC brake function with regenerative braking (net braking along the ramp) after OFF1 or OFF3. This permits braking with controlled motor frequency and minimum power input into the motor. Effective braking without using additional hardware components is obtained by optimizing the ramp down time and compound braking.				

Dependency: Caution: Note:	 The compound braking current is only activated if the DC link voltage exceeds the threshold value in r1282. Compound braking does not operate: when DC braking is active (refer to p1230, r1239) as long as the motor is not magnetized (e.g. for flying restart) for vector control (p1300 >= 20) for synchronous motors (p0300 = 2xx) Generally, increasing the braking current improves the braking effect when stopping the motor. However, if the value is set too high, then the drive can be tripped (shut down) as a result of overcurrent or ground fault. Recommendation: p3856 < 100 % x (r0209 - r0331) / p0305 / 2 Compound braking generates a current in the motor with a ripple manifesting the rotational frequency. The high the braking current is set, the higher the resulting ripple, especially when the Vdc(max) control is simultaneou active (refer to to p1280). The parameter value is entered relative to the rated motor current (p0305). Compound braking is deactivated p3856 = 0%. 			vever, if the fault. cy. The higher multaneously

1.3.5 Encoder data sets (EDS)

Product: SINAMICS G120C, Version: 4502400, Language: eng, Type: EDS p0422[0...n] Absolute encoder linear measuring step resolution / Enc abs meas step

1.4 BICO parameters (connectors/binectors)

1.4.1 Binector inputs (BI)

Product: SINAMICS	S G120C, Version: 4502400, Language: eng, Type: Bl
p0730	BI: CU signal source for terminal DO 0 / CU S_src DO 0
p0731	BI: CU signal source for terminal DO 1 / CU S_src DO 1
p0782[01]	BI: CU analog outputs invert signal source / CU AO inv S_src
p0806	BI: Inhibit master control / PcCtrl inhibit
p0810	BI: Command data set selection CDS bit 0 / CDS select., bit 0
p0820[0n]	BI: Drive Data Set selection DDS bit 0 / DDS select., bit 0
p0840[0n]	BI: ON / OFF (OFF1) / ON / OFF (OFF1)
p0844[0n]	BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 S_src 1
p0845[0n]	BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 S_src 2
p0848[0n]	BI: No Quick Stop / Quick Stop (OFF3) signal source 1 / OFF3 S_src 1
p0849[0n]	BI: No Quick Stop / Quick Stop (OFF3) signal source 2 / OFF3 S_src 2
p0852[0n]	BI: Enable operation/inhibit operation / Operation enable
p0854[0n]	BI: Control by PLC/no control by PLC / Master ctrl by PLC
p0855[0n]	BI: Unconditionally release holding brake / Uncond open brake
p0856[0n]	BI: Speed controller enable / n_ctrl enable
p0858[0n]	BI: Unconditionally close holding brake / Uncond close brake
p1020[0n]	BI: Fixed speed setpoint selection Bit 0 / n_set_fixed Bit 0
p1021[0n]	BI: Fixed speed setpoint selection Bit 1 / n_set_fixed Bit 1
p1022[0n]	BI: Fixed speed setpoint selection Bit 2 / n_set_fixed Bit 2
p1023[0n]	BI: Fixed speed setpoint selection Bit 3 / n_set_fixed Bit 3
p1035[0n]	BI: Motorized potentiometer setpoint raise / Mop raise
p1036[0n]	BI: Motorized potentiometer lower setpoint / Mop lower
p1043[0n]	BI: Motorized potentiometer accept setting value / MotP acc set val
p1055[0n]	BI: Jog bit 0 / Jog bit 0
p1056[0n]	BI: Jog bit 1 / Jog bit 1
p1110[0n]	BI: Inhibit negative direction / Inhib neg dir
p1111[0n]	BI: Inhibit positive direction / Inhib pos dir
p1113[0n] p1140[0n]	BI: Setpoint inversion / Setp inv BI: Enable ramp-function generator/inhibit ramp-function generator / RFG enable
p1140[0n] p1141[0n]	BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG
p1142[0n]	BI: Enable setpoint/inhibit setpoint / Setpoint enable
p1201[0n]	BI: Flying restart enable signal source / Fly res enab S src
p1230[0n]	BI: DC braking activation / DC brake act
p2080[015]	BI: Binector-connector converter status word 1 / Bin/con ZSW1
p2103[0n]	BI: 1. Acknowledge faults / 1. Acknowledge
p2104[0n]	BI: 2. Acknowledge faults / 2. Acknowledge
p2106[0n]	BI: External fault 1 / External fault 1
p2112[0n]	BI: External alarm 1 / External alarm 1
p2200[0n]	BI: Technology controller enable / Tec_ctrl enable
p2220[0n]	BI: Technology controller fixed value selection bit 0 / Tec_ctrl sel bit 0
p2221[0n]	BI: Technology controller fixed value selection bit 1 / Tec_ctrl sel bit 1
p2222[0n]	BI: Technology controller fixed value selection bit 2 / Tec_ctrl sel bit 2
p2223[0n]	BI: Technology controller fixed value selection bit 3 / Tec_ctrl sel bit 3
p2235[0n]	BI: Technology controller motorized potentiometer raise setpoint / Tec_ctrl mop raise
p2236[0n]	BI: Technology controller motorized potentiometer lower setpoint / Tec_ctrl mop lower
p2286[0n]	BI: Hold technology controller integrator / Tec_ctr integ stop

- p3330[0...n] BI: 2/3 wire control command 1 / 2/3 wire cmd 1
- p3331[0...n] BI: 2/3 wire control command 2 / 2/3 wire cmd 2
- p3332[0...n] BI: 2/3 wire control command 3 / 2/3 wire cmd 3
- p5614 BI: Pe set switch-on inhibit signal source / Pe sw on_inh s_src
- p8785 BI: CAN status word bit 8 / Status word bit 8
- p8786 BI: CAN status word bit 14 / Status word bit 14
- p8787 BI: CAN status word bit 15 / Status word bit 15

1.4.2 Connector inputs (CI)

1.4.3 Binector outputs (BO)

Product: SINAMIC	S G120C, Version: 4502400, Language: eng, Type: BO			
r0751.09	BO: CU analog inputs status word / CU AI status word			
r0785.01	BO: CU analog outputs status word / CU AO ZSW			
r0807.0	BO: Master control active / PcCtrl active			
r1025.0	BO: Fixed speed setpoint status / n_setp_fix status			
r2043.02	BO: PROFIdrive PZD state / PD PZD state			
r2090.015	BO: PROFIdrive PZD1 receive bit-serial / PZD1 recv bitw			
r2091.015	BO: PROFIdrive PZD2 receive bit-serial / PZD2 recv bitw			
r2092.015	BO: PROFIdrive PZD3 receive bit-serial / PZD3 recv bitw			
r2093.015	BO: PROFIdrive PZD4 receive bit-serial / PZD4 recv bitw			
r2094.015	BO: Connector-binector converter binector output / Con/bin outp			
r2095.015	BO: Connector-binector converter binector output / Con/bin outp			

1.4.4 Connector outputs (CO)

Product: SINAMICS	G120C, Version: 4502400, Language: eng, Type: CO
r0021	CO: Actual speed smoothed / n_act smooth
r0025	CO: Output voltage smoothed / U_outp smooth
r0026	CO: DC link voltage smoothed / Vdc smooth
r0027	CO: Absolute actual current smoothed / I_act abs val smth
r0032	CO: Active power actual value smoothed / P_actv_act smth
r0034	CO: Motor utilization / Motor utilization
r0035	CO: Motor temperature / Mot temp
r0036	CO: Power unit overload I2t / PU overload I2t
r0037[019]	CO: Power unit temperatures / PU temperatures
r0060	CO: Speed setpoint before the setpoint filter / n_set before filt.
r0062	CO: Speed setpoint after the filter / n_set after filter
r0063[02]	CO: Speed actual value / n_act
r0064	CO: Speed controller system deviation / n_ctrl system dev
r0066	CO: Output frequency / f_outp
r0067	CO: Output current, maximum / I_outp max
r0068[01]	CO: Absolute current actual value / I_act abs val
r0069[06]	CO: Phase current actual value / I_phase act value
r0070	CO: Actual DC link voltage / Vdc act val
r0072	CO: Output voltage / U_output
r0074	CO: Modulat_depth / Modulat_depth
r0075	CO: Current setpoint field-generating / Id_set
r0076	CO: Current actual value field-generating / Id_act
r0077	CO: Current setpoint torque-generating / Iq_set
r0078	CO: Current actual value torque-generating / Iq_act
r0079	CO: Torque setpoint / M_set total
r0080[01]	CO: Torque actual value / M_act
r0081	CO: Torque utilization / M_Utilization
r0082[02]	CO: Active power actual value / P_act
r0083	CO: Flux setpoint / Flex setp
r0084[01]	CO: Flux actual value / Flux act val
r0087	CO: Actual power factor / Cos phi act
r0289	CO: Maximum power unit output current / PU I_outp max
r0752[01]	CO: CU analog inputs input voltage/current actual / CU AI U/I_inp act

r0755[01]	CO: CU analog inputs actual value in percent / CU Al value in %
r0944	CO: Counter for fault buffer changes / Fault buff change
p1001[0n]	CO: Fixed speed setpoint 1 / n_set_fixed 1
p1002[0n]	CO: Fixed speed setpoint 2 / n_set_fixed 2
p1003[0n]	CO: Fixed speed setpoint 3 / n_set_fixed 3
p1004[0n]	CO: Fixed speed setpoint 4 / n_set_fixed 4
p1005[0n]	CO: Fixed speed setpoint 5 / n_set_fixed 5
p1006[0n]	CO: Fixed speed setpoint 6 / n_set_fixed 6
p1007[0n]	CO: Fixed speed setpoint 7 / n_set_fixed 7
p1008[0n]	CO: Fixed speed setpoint 8 / n_set_fixed 8
p1009[0n]	CO: Fixed speed setpoint 9 / n_set_fixed 9
p1010[0n]	CO: Fixed speed setpoint 10 / n_set_fixed 10
p1011[0n]	CO: Fixed speed setpoint 11 / n_set_fixed 11
p1012[0n]	CO: Fixed speed setpoint 12 / n_set_fixed 12
p1013[0n]	CO: Fixed speed setpoint 13 / n_set_fixed 13
p1014[0n]	CO: Fixed speed setpoint 14 / n_set_fixed 14
p1015[0n]	CO: Fixed speed setpoint 15 / n_set_fixed 15
r1024	CO: Fixed speed setpoint effective / n_set_fixed eff
r1045	CO: Mot. potentiometer speed setp. in front of ramp-fct. gen. / Mop n_set bef RFG
r1050	CO: Motor. potentiometer setpoint after the ramp-function generator / Mop setp after RFG
r1073	CO: Main setpoint effective / Main setpoint eff
r1077	CO: Supplementary setpoint effective / Suppl setpoint eff
r1078	CO: Total setpoint effective / Total setpoint eff
p1083[0n]	CO: Speed limit in positive direction of rotation / n_limit pos
r1084	CO: Speed limit positive effective / n_limit pos eff
p1086[0n]	CO: Speed limit in negative direction of rotation / n_limit neg
r1087	CO: Speed limit negative effective / n_limit neg eff
r1112	CO: Speed setpoint after minimum limiting / n_set aft min_lim
r1114	CO: Setpoint after the direction limiting / Setp after limit
r1119	CO: Ramp-function generator setpoint at the input / RFG setp at inp
r1149	CO: Ramp-function generator, acceleration / RFG acceleration
r1150	CO: Ramp-function generator speed setpoint at the output / RFG n_set at outp
r1170	CO: Speed controller, setpoint sum / n_ctrl setp sum
r1258	CO: Vdc controller output / Vdc ctrl output
r1298	CO: Vdc controller output (U/f) / Vdc_ctrl output
r1337	CO: Actual slip compensation / Slip comp act val
r1343	CO: I_max controller frequency output / I_max_ctrl f_outp
r1348	CO: U/f control Eco factor actual value / U/f Eco fac act v
p1351[0n]	CO: Motor holding brake starting frequency / Brake f_start
r1438	CO: Speed controller, speed setpoint / n ctrl n set
r1445	CO: Actual speed smoothed / n_act smooth
r1482	CO: Speed controller I torque output / n_ctrl I-M_output
r1493	CO: Moment of inertia, total / M inertia total
r1508	CO: Torque setpoint before supplementary torque / M_set bef. M_suppl
r1516	CO: Supplementary torque and acceleration torque / M_suppl + M_accel
p1520[0n]	CO: Torque limit upper / M max upper
p1521[0n]	CO: Torque limit lower / M_max lower
p1524[0n]	CO: Torque limit upper/motoring scaling / M_max up/mot scal
p1524[0n] p1525[0n]	CO: Torque limit lower scaling / M_max lower scal
r1526	CO: Torque limit upper without offset / M_max up w/o offs
r1527	CO: Torque limit lower without offset / M_max low w/o offs
r1538	CO: Upper effective torque limit / M_max upper eff
r1538	
11009	CO: Lower effective torque limit / M_max lower eff

r1547[01]	CO: Torque limit for speed controller output / M_max outp n_ctrl
p1570[0n]	CO: Flux setpoint / Flux setpoint
r1598	CO: Total flux setpoint / Flux setp total
r1732[01]	CO: Direct-axis voltage setpoint / Direct U set
r1733[01]	CO: Quadrature-axis voltage setpoint / Quad U set
r1801[01]	CO: Pulse frequency / Pulse frequency
r2050[011]	CO: PROFIBUS PZD receive word / PZD recv word
r2060[010]	CO: PROFIdrive PZD receive double word / PZD recv DW
r2089[04]	CO: Send binector-connector converter status word / Bin/con ZSW send
r2009[04] r2120	CO: Sum of fault and alarm buffer changes / Sum buffer changed
r2131	CO: Actual fault code / Actual fault code
r2132	CO: Actual lalarm code / Actual lalarm code
r2169	CO: Actual again code / Actual again code CO: Actual speed smoothed signals / n_act smth message
	CO: Technology controller, fixed value 1 / Tec_ctrl fix val1

r9872.020	CO/BO: SI status (processor 2) / SI Status P2

1.5 Parameters for write protection and know-how protection

1.5.1 Parameters with "WRITE_NO_LOCK"

The following list contains the parameters with the "WRITE_NO_LOCK" attribute.

These parameters are not affected by the write protection.

Product: SINAMICS	G120C, Version: 4502400, Language: eng, Type: WRITE_NO_LOCK
p0003	Access level / Acc_level
p0010	Drive commissioning parameter filter / Drv comm. par_filt
p0124[0n]	CU detection via LED / CU detection LED
p0970	Reset drive parameters / Drive par reset
p0971	Save parameters / Save par
p0972	Drive unit reset / Drv_unit reset
p2111	Alarm counter / Alarm counter
p3950	Service parameter / Serv. par.
p3981	Faults, acknowledge drive object / Faults ackn DO
p3985	Master control mode selection / PcCtrl mode select
p7761	Write protection / Write protection
p9400	Safely remove memory card / Mem_card rem
p9484	BICO interconnections search signal source / BICO S_src srch

1.5.2 Parameters with "KHP_WRITE_NO_LOCK"

The following list contains the parameters with the "KHP_WRITE_NO_LOCK" attribute.

These parameters are not affected by the know-how protection.

Product: SINAMICS p0003	G120C, Version: 4502400, Language: eng, Type: KHP_WRITE_NO_LOCK Access level / Acc_level
p0010	Drive commissioning parameter filter / Drv comm. par_filt
p0124[0n]	CU detection via LED / CU detection LED
p0970	Reset drive parameters / Drive par reset
p0971	Save parameters / Save par
p0972	Drive unit reset / Drv_unit reset
p2111	Alarm counter / Alarm counter
p3950	Service parameter / Serv. par.
p3981	Faults, acknowledge drive object / Faults ackn DO
p3985	Master control mode selection / PcCtrl mode select
p7761	Write protection / Write protection
p9400	Safely remove memory card / Mem_card rem
p9484	BICO interconnections search signal source / BICO S_src srch

1.5.3 Parameters with "KHP_ACTIVE_READ"

The following list contains the parameters with the "KHP_ACTIVE_READ" attribute.

These parameters can also be read with activated know-how protection.

Product: SINAMICS	S G120C, Version: 4502400, Language: eng, Type: KHP_ACTIVE_READ
p0015	Macro drive unit / Macro drv unit
p0100	IEC/NEMA mot stds / IEC/NEMA mot stds
p0170	Number of Command Data Sets (CDS) / CDS count
p0180	Number of Drive Data Sets (DDS) / DDS count
p0199[024]	Drive object name / DO name
p0300[0n]	Motor type selection / Mot type sel
p0304[0n]	Rated motor voltage / Mot U_rated
p0305[0n]	Rated motor current / Mot I_rated
p0505	Selecting the system of units / Unit sys select
p0595	Technological unit selection / Tech unit select
p0730	BI: CU signal source for terminal DO 0 / CU S_src DO 0
p0731	BI: CU signal source for terminal DO 1 / CU S_src DO 1
p0806	BI: Inhibit master control / PcCtrl inhibit
p0922	PROFIdrive telegram selection / PD Telegr_sel
p1080[0n]	Minimum speed / n_min
p1082[0n]	Maximum speed / n_max
p1520[0n]	CO: Torque limit upper / M_max upper
p2000	Reference speed reference frequency / n_ref f_ref
p2001	Reference voltage / Reference voltage
p2002	Reference current / I_ref
p2003	Reference torque / M_ref
p2006	Reference temp / Ref temp
p2030	Field bus int protocol selection / Field bus protocol
p2038	PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode
p2079	PROFIdrive PZD telegram selection extended / PD PZD tel ext
p7763	KHP OEM exception list number of indices for p7764 / KHP OEM qty p7764
p7764[0n]	KHP OEM exception list / KHP OEM excep list
p9601	SI enable, functions integrated in the drive (processor 1) / SI enable fct P1
p9810	SI PROFIsafe address (processor 2) / SI PROFIsafe P2

1.6 Quick commissioning (p0010 = 1)

The parameters required for the quick commissioning (p0010 = 1) are shown in Table 1-7:

Par. no.	Name	Access level		Can be changed
p0010	Drive, commissioning parameter filter	1		C(1)T
p0015	Macro drive unit	1		C(1)
p0100	IEC/NEMA motor standard	1		C(1)
p0205	Power unit application	1		C(1,2)
p0230	Drive filter type, motor side	1		C(1,2)
p0300	Motor type selection	2		C(1,3)
p0301	Motor code number selection	2		C(1,3)
p0304	Rated motor voltage	1		C(1,3)
p0305	Rated motor current	1		C(1,3)
p0306	Number of motors connected in parallel:	1		C(1,3)
p0307	Rated motor power	1		C(1,3)
p0308	Rated motor power factor	1		C(1,3)
p0309	Rated motor efficiency	1		C(1,3)
p0310	Rated motor frequency	1		C(1,3)
p0311	Rated motor speed	1		C(1,3)
p0316	Motor torque constant	4		C(1,3)UT
p0322	Maximum motor speed	1		C(1,3)
p0323	Maximum motor current	1		C(1,3)
p0335	Motor cooling type	2		C(1,3)T
p0500	Technology application	2	G120C CAN G120C DP G120C USS/MB G120C PN	C(1,5)T
p0500	Technology application	4	G120C PN	C(1,5)T
p0640	Current limit	2		C(1,3)UT
p0922	PROFIdrive telegram selection	1		C(1)T
p0970	Reset drive parameters	1		C(1,30)
p1080	Minimum speed	1		C(1)T
p1082	Maximum speed	1		C(1)T
p1120	Ramp-function generator, ramp-up time	1		C(1)UT
p1121	Ramp-function generator, ramp-down time	1		C(1)UT
p1135	OFF3 ramp-down time	2		C(1)UT

Table 1-7Quick commissioning (p0010 = 1)

Par. no.	Name	A	ccess level	Can be changed
p1300	Open-loop/closed-loop control operating mode	2		C(1)T
p1900	Motor data identification and rotating measure- ment	2		C(1)T
p1905	Parameter tuning selection	1		C(1)T
p3900	Completion of quick commissioning	1		C(1)

rable r - r Quick commissioning (poor $r - r$), commuted	Table 1-7	Quick commissioning (p0010 = 1), continued
---	-----------	--

If p0010 = 1 is selected, p0003 (user access level) can be used to select the parameters that are to be accessed.

At the end of the quick commissioning, set p3900 = 1 to perform the required motor calculations and reset all other parameters (not included in p0010 = 1) to their default settings.

Note:

This only applies for the quick commissioning.

3.2	List of faults and alarms	3-436

Overview of faults and alarms

3.1 Overview of faults and alarms

3.1.1 General information

Display of faults and alarms (fault and alarm messages)

A message comprises a letter followed by the relevant number.

The letter identifies the message type and has the following meaning:

- A means "Alarm"
- F means "Fault"
- N means "No message" or "Internal message" ("No report")
- C means "Safety message"

Brackets with the letters A, F or N indicate that the message type can be changed, e.g. A01016 (F) means that the alarm A01016 can also parameterized as a fault. This function has not been released for the SINAMICS G120C.

Faults are stored in parameter r0945/r0947 under their code number (e.g. F01003 = 1003). The associated fault value can be found in parameter r0949. The value 0 is entered if a fault has no fault value. It is also possible to read out the time that a fault occurred (r0948) and the number of faults (p0952).

The alarms are stored in parameter r2110/r2122 under their code number (e.g. A01503 = 1503) and can be read out from there. The associated alarm value can be found in parameter r2124 and the time of the alarm occurrence in r2123.

Differences between faults and alarms

The differences between faults and alarms are as follows:

	Tabelle 3-1	Differences	between	faults	and	alarms
--	-------------	-------------	---------	--------	-----	--------

Туре	Description
Faults	 What happens when a fault occurs? The appropriate fault reaction is triggered. Status bit ZSW1.3 is set. The fault is entered in the fault buffer.
	How are faults eliminated?Remove the original cause of the fault.Acknowledge the fault.
Alarms	 What happens when an alarm occurs? Status signal ZSW1.7 is set. The alarm is entered in the alarm buffer. How are alarms eliminated? Alarms acknowledge themselves. If the cause of the alarm is no longer present, they automatically reset themselves.

Overview of faults and alarms

3.1.2 Fault reactions

Specifies the default reaction in the event of a fault. The optional brackets indicate whether the fault reaction can be changed and which fault reactions can be set (p2100, p2101). The following fault reactions are defined:

Tabelle 3-2 Fault reactions

List	PROFI- drive	Reaction	Description
NONE	-	None	No reaction when a fault occurs.
OFF1	ON/ OFF	Brake along the ramp-function generator decel- eration ramp fol- lowed by pulse disable	 Speed control n_set = 0 is input immediately to brake the drive along the ramp-function generator deceleration ramp (p1121) until zero speed is detected.
OFF2	COAST STOP	Internal/external pulse disable	 Speed control Immediate pulse suppression, the drive "coasts" to a standstill. "Switching on inhibited" is activated.
OFF3	QUICK STOP	Brake along the OFF3 decelera- tion ramp fol- lowed by pulse disable	 Speed control n_set = 0 is input immediately to brake the drive along the OFF3 deceleration ramp (p1135) until zero speed is detected. "Switching on inhibited" is activated.
STOP2	-	n_set = 0	 n_set = 0 is input immediately to brake the drive along the OFF3 deceleration ramp (p1135). Although braking is performed on the OFF3 deceleration down, r0052 bit 5 = 1. The drive remains in speed control mode.
IASC/DCBRK	-	-	 If a fault occurs with this fault reaction, DC braking is triggered. DC braking must have been commissioned (p1230 to p1239).

3.1.3 Acknowledgement of faults

The list of faults and alarms specifies how to acknowledge each fault after the cause has been remedied. The optional brackets indicate whether the default acknowledgement can be changed and which acknowledgement can be adjusted via parameters (p2126, p2127).

 Tabelle 3-3
 Acknowledgement of faults

Acknowledge- ment	Description	
POWER ON	The fault is acknowledged via a POWER ON (switch Control Unit off and on again).	
	Note:	
	If this action has not eliminated the fault cause, the fault is displayed again immediately after power up.	
IMMEDIATELY	Faults can be acknowledged as follows:	
	1 Acknowledge by setting parameter:	
	p3981 = 0> 1	
	2 Acknowledge via binector inputs:	
	p2103 BI: 1. Acknowledge faults	
	p2104 BI: 2. Acknowledge faults	
	3 Acknowledge using PROFIBUS control signal:	
	STW1.7 = 0> 1 (edge)	
	Note:	
	 These faults can also be acknowledged by a POWER ON. 	
	 If this action has not eliminated the fault cause, the fault will continue to be displayed after acknowledgement. 	

Product: SINAMICS G120C, Version: 4502400, Language: eng Objects: G120C_CAN, G120C_DP, G120C_PN, G120C_USS

F01000	• · · •
101000	Internal software error
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 evaluate fault buffer (r0945). carry out a POWER ON (power off/on) for all components. upgrade firmware to later version. contact the Hotline. replace the Control Unit.
F01001	FloatingPoint exception
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An exception occurred during an operation with the FloatingPoint data type. The error may be caused by the base system or an OA application (e.g., FBLOCKS, DCC). Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting. Note: Refer to r9999 for further information about this fault. r9999[0]: Fault number. r9999[1]: Program counter at the time when the exception occurred. r9999[2]: Cause of the FloatingPoint exception. Bit 0 = 1: Operation invalid Bit 1 = 1: Division by zero Bit 2 = 1: Overflow Bit 3 = 1: Underflow Bit 4 = 1: Imprecise result
Remedy:	 carry out a POWER ON (power off/on) for all components. check configuration and signals of the blocks in FBLOCKS. check configuration and signals of DCC charts. upgrade firmware to later version. contact the Hotline.
F01002	Internal software error
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
F01003	Acknowledgement delay when accessing the memory
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A memory area was accessed that does not return a "READY". Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - contact the Hotline.

N01004 (F, A)	Internal software error
Reaction:	NONE
Acknowledge:	NONE
Cause:	An internal software error has occurred. Fault value (r0949, hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 read out diagnostics parameter (r9999). contact the Hotline.
F01005	File upload/download error
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The upload or download of EEPROM data was unsuccessful.
	Fault value (r0949, interpret hexadecimal):
	yyxxxx hex: yy = component number, xxxx = fault cause
	xxxx = 000B hex = 11 dec:
	Power unit component has detected a checksum error. xxxx = 000F hex = 15 dec:
	The selected power unit will not accept the content of the EEPROM file.
	xxxx = 0011 hex = 17 dec:
	Power unit component has detected an internal access error.
	xxxx = 0012 hex = 18 dec:
	After several communication attempts, no response from the power unit component. xxxx = 008B hex = 140 dec:
	EEPROM file for the power unit component not available on the memory card.
	xxxx = 008D hex = 141 dec:
	An inconsistent length of the firmware file was signaled. It is possible that the download/upload has been interrupted
	 xxxx = 0090 hex = 144 dec: When checking the file that was loaded, the component detected a fault (checksum). It is possible that the file on the memory card is defective.
	xxxx = 0092 hex = 146 dec: This SW or HW does not support the selected function.
	xxxx = 009C hex = 156 dec:
	Component with the specified component number is not available (p7828). xxxx = Additional values:
	Only for internal Siemens troubleshooting.
Remedy:	Save a suitable firmware file or EEPROM file for upload or download in folder "/ee_sac/" on the memory card.
A01009 (N)	CU: Control module overtemperature
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature (r0037[0]) of the control module (Control Unit) has exceeded the specified limit value.
Remedy:	- check the air intake for the Control Unit. - check the Control Unit fan.
	Note:
	The alarm automatically disappears after the limit value has been undershot.
F01010	Drive type unknown
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	An unknown drive type was found.
Remedy:	- replace Power Module.
	- carry out a POWER ON (power off/on).
	- upgrade firmware to later version.
	- contact the Hotline.

F01015	Internal software error
Reaction:	OFF2
Acknowledge:	POWER ON
Cause: Remedy:	An internal software error has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components.
	- upgrade firmware to later version. - contact the Hotline.
A01016 (F)	Firmware changed
Reaction:	NONE
Acknowledge:	NONE
Cause:	 At least one firmware file in the directory was illegally changed on the non-volatile memory (memory card/device memory) with respect to the version when shipped from the factory. Alarm value (r2124, interpret decimal): 0: Checksum of one file is incorrect. 1: File missing. 2: Too many files. 3: Incorrect firmware version. 4: Incorrect checksum of the back-up file.
Remedy:	For the non-volatile memory for the firmware (memory card/device memory), restore the delivery condition. Note: The file involved can be read out using parameter r9925. The status of the firmware check is displayed using r9926.
A01017	Component lists changed
Reaction:	NONE
Acknowledge:	NONE
Cause:	On the memory card, one file in the directory /SIEMENS/SINAMICS/DATA or /ADDON/SINAMICS/DATA has been illegally changed with respect to that supplied from the factory. No changes are permitted in this directory. Alarm value (r2124, interpret decimal): zyx dec: x = Problem, y = Directory, x = File name x = 1: File does not exist. x = 2: Firmware version of the file does not match the software version. x = 3: File checksum is incorrect. y = 0: Directory /SIEMENS/SINAMICS/DATA/ y = 1: Directory /ADDON/SINAMICS/DATA/ z = 0: File MOTARM.ACX z = 1: File MOTSRM.ACX z = 2: File MOTSLM.ACX z = 3: File ENCDATA.ACX z = 3: File ENCDATA.ACX z = 4: File FILTDATA.ACX z = 5: File BRKDATA.ACX z = 5: File BRKDATA.ACX z = 6: File DAT_BEAR.ACX
Remedy:	z = 7: File CFG_BEAR.ACX For the file on the memory card involved, restore the status originally supplied from the factory.
F01018	Booting has been interrupted several times
Reaction:	NONE
Acknowledge:	POWER ON
Causai	Module booting was interrupted several times.
Cause:	Possible reasons for booting being interrupted: - POWER OFF of the module. - CPU crash. - USER data invalid. After this fault is output, then the module is booted with the factory settings.

	Note:
	After switching on, the module reboots from the USER data (if available).
	If the fault situation is repeated, then this fault is again output after several interrupted boots.
A01019	Writing to the removable data medium unsuccessful
Reaction:	NONE
Acknowledge:	NONE
Cause:	The write access to the removable data medium was unsuccessful.
Remedy:	Remove and check the removable data medium. Then run the data backup again.
A01020	Writing to RAM disk unsuccessful
Reaction:	NONE
Acknowledge:	NONE
Cause:	A write access to the internal RAM disk was unsuccessful.
Remedy:	Adapt the file size for the system logbook to the internal RAM disk (p9930).
A01021	Removable data medium as USB data storage medium from the PC used
Reaction:	NONE
Acknowledge:	NONE
Cause:	The removable data medium is used as USB data storage medium from a PC As a consequence, the drive cannot access the removable data medium. When backing up, the configuration data cannot be saved on the removable data medium.
	Fault value (r0949, interpret decimal):
	1: The know-how protection as well as the copy protection for the removable data medium is active. Backup is inhibited.
	2: The configuration data are only backed up in the CU.
	See also: r7760 (Write protection/know-how protection status), r9401 (Safely remove memory card status)
Remedy:	Deactivate the USB connection to the PC and back up the configuration data.
	Note:
	The alarm is automatically canceled when disconnecting the USB connection or when removing the removable data medium.
	See also: r9401 (Safely remove memory card status)
F01023	Software timeout (internal)
Reaction:	NONE
Acknowledge:	
0	IMMEDIATELY
Cause:	IMMEDIATELY An internal software timeout has occurred.
Cause:	An internal software timeout has occurred. Fault value (r0949, interpret decimal):
	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components.
	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
Remedy:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version.
Remedy:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error
Remedy: A01028 Reaction:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE
Remedy: A01028 Reaction: Acknowledge:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE
Remedy: A01028 Reaction: Acknowledge: Cause:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB).
Remedy: A01028 Reaction: Acknowledge: Cause: Remedy:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB). Save parameters in a non-volatile fashion (p0971 = 1).
Remedy: A01028 Reaction: Acknowledge: Cause: Remedy: F01030	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB). Save parameters in a non-volatile fashion (p0971 = 1). Sign-of-life failure for master control
Remedy: A01028 Reaction: Acknowledge: Cause: Remedy: F01030 Reaction:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB). Save parameters in a non-volatile fashion (p0971 = 1). Sign-of-life failure for master control OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP2) IMMEDIATELY For active PC master control, no sign-of-life was received within the monitoring time. The master control was returned to the active BICO interconnection.
Remedy: A01028 Reaction: Acknowledge: Cause: Remedy: F01030 Reaction: Acknowledge:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB). Save parameters in a non-volatile fashion (p0971 = 1). Sign-of-life failure for master control OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP2) IMMEDIATELY For active PC master control, no sign-of-life was received within the monitoring time. The master control was returned to the active BICO interconnection. Set the monitoring time higher at the PC or, if required, completely disable the monitoring function.
Remedy: A01028 Reaction: Acknowledge: Cause: Remedy: F01030 Reaction: Acknowledge: Cause:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB). Save parameters in a non-volatile fashion (p0971 = 1). Sign-of-life failure for master control OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP2) IMMEDIATELY For active PC master control, no sign-of-life was received within the monitoring time. The master control was returned to the active BICO interconnection. Set the monitoring time higher at the PC or, if required, completely disable the monitoring function. For the commissioning software, the monitoring time is set as follows:
Remedy: A01028 Reaction: Acknowledge: Cause: Remedy: F01030 Reaction: Acknowledge: Cause:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. Configuration error NONE NONE NONE The parameterization that was downloaded was generated with a different module type (Order No., MLFB). Save parameters in a non-volatile fashion (p0971 = 1). Sign-of-life failure for master control OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP2) IMMEDIATELY For active PC master control, no sign-of-life was received within the monitoring time. The master control was returned to the active BICO interconnection. Set the monitoring time higher at the PC or, if required, completely disable the monitoring function.

Notice:

The monitoring time should be set as short as possible. A long monitoring time means a late response when the
communication fails!

F01033	Units changeover: Reference parameter value invalid
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When changing over the units to the referred representation type, it is not permissible for any of the required reference parameters to be equal to 0.0 Fault value (r0949, parameter): Reference parameter whose value is 0.0. See also: p0505 (Selecting the system of units), p0595 (Technological unit selection)
Remedy:	See also: p0000 (Selecting the system of diffs), p0000 (recimological diff selection) Set the value of the reference parameter to a number different than 0.0. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
F01034	Units changeover: Calculation parameter values after reference value change unsuccessful
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The change of a reference parameter meant that for an involved parameter the selected value was not able to be re calculated in the per unit representation. The change was rejected and the original parameter value restored. Fault value (r0949, parameter): Parameter whose value was not able to be re-calculated. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
Remedy:	Select the value of the reference parameter such that the parameter involved can be calculated in the per unit representation. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
A01035 (F)	ACX: Parameter back-up file corrupted
Reaction:	NONE
Acknowledge:	NONE
Cause:	When the Control Unit is booted, no complete data set was found from the parameter back-up files. The last time that the parameterization was saved, it was not completely carried out. It is possible that the backup was interrupted by switching off or withdrawing the memory card. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: aa = 01 hex:
	Power up was realized without data backup. The drive is in the factory setting. aa = 02 hex:
	The last available internal backup data record was loaded. The parameterization must be checked. It is recommended that the parameterization is downloaded again.
	aa = 03 hex: The last available data record from the memory card was loaded. The parameterization must be checked. aa = 04 hex:
	An invalid data backup was loaded from the memory card into the drive. The drive is in the factory setting. dd, cc, bb: Only for internal Siemens troubleshooting. See also: p0971 (Save parameters)
Remedy:	 Download the project again with the commissioning software. save all parameters (p0971 = 1 or "copy RAM to ROM").
F01036 (A)	ACX: Parameter back-up file missing
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	When downloading the device parameterization, a parameter back-up file PSxxxyyy.ACX associated with a drive object cannot be found. Fault value (r0949, interpret hexadecimal):
	Byte 1: yyy in the file name PSxxxyyy.ACX

Remedy:	 yyy = 000> consistency back-up file yyy = 001 062> drive object number yyy = 099> PROFIBUS parameter back-up file Byte 2, 3, 4: Only for internal Siemens troubleshooting. If you have saved the project data using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0971 = 1 so that all of the parameter files are again completely written to the non-volatile memory. If you have not saved the project data, then first commissioning of the system has to be carried out again.
F01038 (A)	ACX: Loading the parameter back-up file unsuccessful
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	An error has occurred when downloading PSxxxyyy.ACX or PTxxxyyy.ACX files from the non-volatile memory. Fault value (r0949, interpret hexadecimal): Byte 1: yyy in the file name PSxxxyyy.ACX yyy = 000> consistency back-up file yyy = 001 062> drive object number yyy = 099> PROFIBUS parameter back-up file Byte 2: 255: Incorrect drive object type. 254: Topology comparison unsuccessful -> drive object type was not able to be identified. Reasons could be: - Incorrect component type in the actual topology - Component does not exist in the actual topology. - Component not active. Additional values: Only for internal Siemens troubleshooting. Byte 4, 3: Only for internal Siemens troubleshooting.
Remedy:	 If you have saved the project data using the commissioning software, download the project again. Save using the function "Copy RAM to ROM" or with p0971 = 1 so that all of the parameter files are again completely written to the non-volatile memory. replace the memory card or Control Unit.
F01039 (A)	ACX: Writing to the parameter back-up file was unsuccessful
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	 Writing to at least one parameter back-up file PSxxxyyy.*** in the non-volatile memory was unsuccessful. In the directory /USER/SINAMICS/DATA/ at least one parameter back-up file PSxxxyyy.*** has the "read only" file attribute and cannot be overwritten. There is not sufficient free memory space available. The non-volatile memory is defective and cannot be written to. Fault value (r0949, interpret hexadecimal): dcba hex a = yyy in the file names PSxxxyyy.*** a = 000> consistency back-up file a = 001 062> drive object number a = 099> PROFIBUS parameter back-up file b = xxx in the file names PSxxxyyy.*** b = 000> data save started with p0971 = 1 b = 011> data save started with p0971 = 11 b = 012> data save started with p0971 = 12
	$d_{12} = 0.12 = -2.000$
	Only for internal Siemens troubleshooting.
Remedy:	 check the file attribute of the files (PSxxxyyy.***, CAxxxyyy.***, CCxxxyyy.***) and, if required, change from "read only" to "writeable". check the free memory space in the non-volatile memory. Approx. 80 kbyte of free memory space is required for every drive object in the system.
	- replace the memory card or Control Unit.

F01040	Save parameter settings and carry out a POWER ON
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	A parameter has been changed that requires the parameters to be backed up and the Control Unit to be switched OFF and ON again.
Remedy:	- Save parameters (p0971). - carry out a POWER ON (power off/on) for the Control Unit.
F01042	Parameter error during project download
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	An error was detected when downloading a project using the commissioning software (e.g. incorrect parameter value).
	For the specified parameter, it was detected that dynamic limits were exceeded that may possibly depend on othe
	parameters.
	Fault value (r0949, interpret hexadecimal):
	ccbbaaaa hex aaaa = Parameter
	bb = Index
	cc = fault cause
	0: Parameter number illegal.
	1: Parameter value cannot be changed.
	2: Lower or upper value limit exceeded. 3: Sub-index incorrect.
	4: No array, no sub-index.
	5: Data type incorrect.
	6: Setting not permitted (only resetting).
	7: Descriptive element cannot be changed.
	9: Descriptive data not available.
	11: No master control. 15: No text array available.
	17: Task cannot be executed due to operating state.
	20: Illegal value.
	21: Response too long.
	22: Parameter address illegal.
	23: Format illegal.
	24: Number of values not consistent. 108: Unit unknown.
	Additional values:
	Only for internal Siemens troubleshooting.
Remedy:	- enter the correct value in the specified parameter.
	- identify the parameter that restricts the limits of the specified parameter.
F01043	Fatal error at project download
Reaction:	OFF2 (OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	A fatal error was detected when downloading a project using the commissioning software.
	Fault value (r0949, interpret decimal):
	1: Device status cannot be changed to Device Download (drive object ON?).
	2: Incorrect drive object number.
	 8: Maximum number of drive objects that can be generated exceeded. 11: Error while generating a drive object (global component).
	12: Error while generating a drive object (drive component).
	13: Unknown drive object type.
	14: Drive status cannot be changed to "ready for operation" (p0947 and p0949).
	15: Drive status cannot be changed to drive download.
	15: Drive status cannot be changed to drive download.16: Device status cannot be changed to "ready for operation".
	15: Drive status cannot be changed to drive download.16: Device status cannot be changed to "ready for operation".18: A new download is only possible if the factory settings are restored for the drive unit.
	15: Drive status cannot be changed to drive download.16: Device status cannot be changed to "ready for operation".

Remedy:	 22: SW-internal download error. 100: The download was canceled, because no write requests were received from the commissioning client. (e.g. for interrupted communication). Additional values: only for internal Siemens troubleshooting. use the current version of the commissioning software. modify the offline project and download again (e.g. compare the motor and Power Module in the offline project and on the drive). change the drive state (is a drive rotating or is there a message/signal?). carefully note any other messages/signals and remove their cause. boot from previously saved files (power-down/power-up or p0970=10,).
F01044	CU: Descriptive data error
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An error was detected when loading the descriptive data saved in the non-volatile memory.
Remedy:	Replace the memory card or Control Unit.
A01045	Configuring data invalid
Reaction:	NONE
Acknowledge:	NONE
Cause:	An error was detected when evaluating the parameter files PSxxxyyy.ACX, PTxxxyyy.ACX, CAxxxyyy.ACX, or CCxxxyyy.ACX saved in the non-volatile memory. Because of this, under certain circumstances, several of the saved parameter values were not able to be accepted. Also see r9406 up to r9408. Alarm value (r2124, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 Check the parameters displayed in r9406 up to r9408, and correct these if required. Restore the factory setting using (p0970 = 1) and re-load the project into the drive unit. Then save the parameterization in STARTER using the "Copy RAM to ROM" function or with p0971 = 1. This overwrites the incorrect parameter files in the non-volatile memory – and the alarm is withdrawn.
A01049	It is not possible to write to file
Reaction:	NONE
Acknowledge:	NONE
Cause:	It is not possible to write into a write-protected file (PSxxxxx.acx). The write request was interrupted. Alarm value (r2124, interpret decimal): Drive object number.
Remedy:	Check whether the "write protected" attribute has been set for the files in the non-volatile memory under/USER/SINAMICS/DATA/ When required, remove write protection and save again (e.g. set p0971 to 1).
F01054	CU: System limit exceeded
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	At least one system overload has been identified. Fault value (r0949, interpret decimal): 1: Computing time load too high (r9976[1]). 5: Peak load too high (r9976[5]). See also: r9976 (System utilization)
Remedy:	Re fault value = 1, 5: - reduce the computing time load of the drive unit (r9976[1] and r9976[5]) to under 100 %. - check the sampling times and adjust if necessary (p0115, p0799, p4099). - de-activate function modules. - de-activate drive objects. - remove drive objects from the target topology. - note the DRIVE-CLiQ topology rules and if required, change the DRIVE-CLiQ topology.

A01064 (F)	 When using the Drive Control Chart (DCC) or free function blocks (FBLOCKS), the following applies the computing time load of the individual run-time groups on a drive object can be read out in r21005 (DCC) or r20005 (FBLOCKS). if necessary, the assignment of the run-time group (p21000, p20000) can be changed in order to increase the sampling time (r21001, r20001). if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS). CU: Internal error (CRC)
Reaction:	NONE
Acknowledge:	NONE
Cause:	CRC error in the Control Unit program memory
Remedy:	- carry out a POWER ON (power off/on) for all components.
	- upgrade firmware to later version. - contact the Hotline.
A01066	Buffer memory: 70% fill level reached or exceeded
Reaction:	NONE
Acknowledge:	NONE
Cause:	The non-volatile buffer memory for parameter changes is filled to at least 70%. This can also occur if the buffer memory is active (p0014 = 1) and parameters are continually changed via a fieldbus system.
Remedy:	If required, de-activate and clear the buffer memory (p0014 = 0). If required, clear the buffer memory (p0014 = 2). In the following cases, the entries in the buffer memory are transferred into the ROM and then the buffer memory is cleared: - p0971 = 1 - power down/power up the Control Unit
A01067	Buffer memory: 100 % fill level reached
A01067 Reaction:	Buffer memory: 100 % fill level reached NONE
	-
Reaction:	NONE NONE The non-volatile buffer memory for parameter changes is filled to 100%. All additional parameter changes will no longer be taken into account in the non-volatile buffer memory. However, parameter changes can still be made in the volatile memory (RAM). This can also occur if the buffer memory is active (p0014 = 1) and parameters are continually changed via a fieldbus

A01069	Parameter backup and device incompatible
Reaction:	NONE
Acknowledge:	NONE
Cause:	The parameter backup on the memory card and the drive unit do not match. The module boots with the factory settings.
	Example: Devices A and B. are not compatible and a memory card with the parameter backup for device A is inserted in device B.
Remedy:	 insert a memory card with compatible parameter backup and carry out a POWER ON. insert a memory card without parameter backup and carry out a POWER ON. If required, withdraw the memory card and carry out POWER ON. save the parameters (p0971 = 1).
F01105 (A)	CU: Insufficient memory
Reaction:	OFF1
Acknowledge:	POWER ON
Cause:	Too many data sets are configured on this Control Unit. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- reduce the number of data sets.
F01107	Save to memory card unsuccessful
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	 A data save to the memory card was not able to be successfully carried out. Memory card is defective. Insufficient space on memory card. Fault value (r0949, interpret decimal): 1: The file on the RAM was not able to be opened. 2: The file on the RAM was not able to be read. 3: A new directory could not be created on the memory card. 4: A new file could not be created on the memory card. 5: A new file could not be written on the memory card.
Remedy:	- try to save again. - replace the memory card or Control Unit.
F01112	CU: Power unit not permissible
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The connected power unit cannot be used together with this Control Unit. Fault value (r0949, interpret decimal): 1: Power unit is not supported (e.g. PM340).
Remedy:	Replace the power unit that is not permissible by a component that is permissible.
F01120 (A)	Terminal initialization has failed
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	An internal software error occurred while the terminal functions were being initialized. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 carry out a POWER ON (power off/on) for all components. upgrade firmware to later version. contact the Hotline. replace the Control Unit.

E01122 (A)	Fraguency at the measuring probe input too high
F01122 (A)	Frequency at the measuring probe input too high
Reaction: Acknowledge:	OFF1 (OFF2) IMMEDIATELY
Cause:	The frequency of the pulses at the measuring probe input is too high.
ouuse.	Fault value (r0949, interpret decimal):
	1: DI 1 (term. 6)
Bomody	2: DI 3 (term. 8) Reduce the frequency of the pulses at the measuring probe input
Remedy:	Reduce the frequency of the pulses at the measuring probe input.
F01205	CU: Time slice overflow
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	Insufficient computation time.
	Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	Contact the Hotline.
F01250 Reaction:	CU: CU-EEPROM incorrect read-only data
Acknowledge:	NONE (OFF2) POWER ON
Cause:	Error when reading the read-only data of the EEPROM in the Control Unit.
	Fault value (r0949, interpret decimal):
	Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON.
	- replace the Control Unit.
A01251	CU: CU-EEPROM incorrect read-write data
Reaction:	NONE
Acknowledge:	NONE
Cause:	Error when reading the read-write data of the EEPROM in the Control Unit.
	Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	For alarm value r2124 < 256, the following applies:
	- carry out a POWER ON.
	- replace the Control Unit.
	For alarm value r2124 >= 256, the following applies: - clear the fault memory (p0952 = 0).
	- replace the Control Unit.
F01257	CU: Firmware version out of date
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	The Control Unit firmware is too old.
	Fault value (r0949, interpret hexadecimal):
	bbbbbbaa hex: aa = unsupported component
	aa = 01 hex = 1 dec: The firmware being used does not support the Control Unit.
	aa = 02 hex = 2 dec:
	The firmware being used does not support the Control Unit.
	aa = 03 hex = 3 dec:
	The firmware being used does not support the Power Module. aa = 04 hex = 4 dec:
	The firmware being used does not support the Control Unit.
Remedy:	Re fault value = 1, 2, 4:
	- Upgrade the firmware of the Control Unit.
	For fault value = 3: - Upgrade the firmware of the Control Unit.
	- Opgrade the firmware of the control offic. - Replace the Power Module by a component that is supported.

F01340	Topology: Too many components on one line
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	For the selected communications clock cycle, too many DRIVE-CLiQ components are connected to one line of the Control Unit. Fault value (r0949, interpret hexadecimal): xyy hex: x = fault cause, yy = component number or connection number. 1yy: The communications clock cycle of the DRIVE-CLiQ connection on the Control Unit is not sufficient for all read
	transfers. 2yy: The communications clock cycle of the DRIVE-CLiQ connection on the Control Unit is not sufficient for all write transfers. 3yy: Cyclic communication is fully utilized. 4yy:
	The DRIVE-CLiQ cycle starts before the earliest end of the application. An additional dead time must be added to the control. Sign-of-life errors can be expected. The conditions of operation with a current controller sampling time of 31.25 µs have not been maintained.
	5yy: Internal buffer overflow for net data of a DRIVE-CLiQ connection. 6yy:
	Internal buffer overflow for receive data of a DRIVE-CLiQ connection. 7yy: Internal buffer overflow for send data of a DRIVE-CLiQ connection.
	8yy: The component clock cycles cannot be combined with one another
	900: The lowest common multiple of the clock cycles in the system is too high to be determined. 901:
	The lowest common multiple of the clock cycles in the system cannot be generated with the hardware.
Remedy:	 check the DRIVE-CLiQ connection. Reduce the number of components on the DRIVE-CLiQ line involved and distribute these to other DRIVE-CLiQ sockets of the Control Unit. This means that communication is uniformly distributed over several lines. Re fault value = 1yy - 4yy in addition:
	 - increase the sampling times (p0112, p0115, p4099). If necessary, for DCC or FBLOCKS, change the assignment of the run-time group (p21000, p20000) so that the sampling time (r21001, r20001) is increased. - if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS). - reduce the function modules (r0108).
	 establish the conditions for operation with a current controller sampling time of 31.25 µs (at the DRIVE-CLiQ line, only operate Motor Modules and Sensor Modules with this sampling time and only use a permitted Sensor Module (e.g. SMC20, this means a 3 at the last position of the order number)). For an NX, the corresponding Sensor Module for a possibly existing second measuring system should be
	connected to a free DRIVE-CLiQ socket of the NX. Re fault value = 8yy in addition:
	 - check the clock cycles settings (p0112, p0115, p4099). Clock cycles on a DRIVE-CLiQ line must be perfect integer multiples of one another. As clock cycle on a line, all clock cycles of all drive objects in the previously mentioned parameters apply, which have components on the line involved. Re fault value = 9yy in addition:
	- check the clock cycles settings (p0112, p0115, p4099). The lower the numerical value difference between two clock cycles, the higher the lowest common multiple. This behavior has a significantly stronger influence, the higher the numerical values of the clock cycles.
F01505 (A)	BICO: Interconnection cannot be established
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A PROFIdrive telegram has been set (p0922). An interconnection contained in the telegram was not able to be established.
	Fault value (r0949, interpret decimal): Parameter receiver that should be changed.

	BICO: Signal source is not float type
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The requested connector output does not have the correct data type. This interconnection is not established. Fault value (r0949, interpret decimal):
	Parameter number to which an interconnection should be made (connector output).
Remedy:	Interconnect this connector input with a connector output having a float data type.
F01511 (A)	BICO: Interconnection with different scalings
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. - the BICO output has different normalized units than the BICO input. - message only for interconnections within a drive object. Example:
	The BICO output has, as normalized unit, voltage and the BICO input has current. This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input. p2002: contains the reference value for current p2001: contains the reference value for voltage Fault value (r0949, interpret decimal):
	Parameter number of the BICO input (signal sink).
Remedy:	Not necessary.
F01512	BICO: No scaling available
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An attempt was made to determine a conversion factor for a scaling that does not exist. Fault value (r0949, interpret decimal): Unit (e.g. corresponding to SPEED) for which an attempt was made to determine a factor.
Remedy:	Apply scaling or check the transfer value.
F01513 (A)	BICO: Interconnection cross DO with different scalings
	BICO: Interconnection cross DO with different scalings
Reaction:	-
F01513 (A) Reaction: Acknowledge: Cause:	NONE
Reaction: Acknowledge:	NONE IMMEDIATELY The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different. Example 1:
Reaction: Acknowledge:	NONE IMMEDIATELY The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different. Example 1: BICO output with voltage normalized unit, BICO input with current normalized unit, BICO output and BICO input lie in different drive objects. This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input.
Reaction: Acknowledge:	 NONE IMMEDIATELY The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different. Example 1: BICO output with voltage normalized unit, BICO input with current normalized unit, BICO output and BICO input lie in different drive objects. This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input. p2002: contains the reference value for current p2001: contains the reference value for voltage
Reaction: Acknowledge:	 NONE IMMEDIATELY The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different. Example 1: BICO output with voltage normalized unit, BICO input with current normalized unit, BICO output and BICO input lie in different drive objects. This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input. p2002: contains the reference value for current

A01514 (F)	BICO: Error when writing during a reconnect
Reaction:	NONE
Acknowledge:	NONE
Cause:	During a reconnect operation (e.g. while booting or downloading - but can also occur in normal operation) a parameter was not able to be written to. Example: When writing to BICO input with double word format (DWORD), in the second index, the memory areas overlap (e.g. p8861). The parameter is then reset to the factory setting. Alarm value (r2124, interpret decimal): Parameter number of the BICO input (signal sink).
Remedy:	Not necessary.
F01515 (A)	BICO: Writing to parameter not permitted as the master control is active
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When changing the number of CDS or when copying from CDS, the master control is active.
Remedy:	If required, return the master control and repeat the operation.
A01590 (F)	Drive: Motor maintenance interval expired
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected service/maintenance interval for this motor was reached. Alarm value (r2124, interpret decimal): Motor data set number.
Remedy:	carry out service/maintenance and reset the service/maintenance interval.
F01600	SI P1: STOP A initiated
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	 The drive-integrated "Safety Integrated" function on processor 1 has detected an error and initiated a STOP A. forced checking procedure of the safety shutdown path on processor 1 unsuccessful. subsequent response to fault F01611 (defect in a monitoring channel). Fault value (r0949, interpret decimal): 0: Stop request from processor 2. 1005: Pulses suppressed although STO not selected and there is no internal STOP A present. 1010: Pulses enabled although STO is selected or an internal STOP A is present. 9999: Subsequent response to fault F01611.
Remedy:	- select Safe Torque Off and de-select again. For fault value = 9999:
	- carry out diagnostics for fault F01611. Note:
	STO: Safe Torque Off
F01611	SI P1: Defect in a monitoring channel
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	 The drive-integrated "Safety Integrated" function on processor 1 has detected a fault in the crosswise data comparison between the two monitoring channels and has initiated a STOP F. Fault F01600 (SI P1: STOP A initiated) is output as a consequence of this fault. Fault value (r0949, interpret decimal): 0: Stop request from processor 2. 1 999: Number of the cross-compared data that resulted in this fault. This number is also displayed in r9795. 2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits. 3: SI F-DI changeover tolerance time (p9650, p9850). 8: SI PROFIsafe address (p9610, p9810). 9: SI debounce time for STO (p9651, p9851). 1000: Watchdog timer has expired.

Remedy:	 Within the time of approx. 5 x p9650, alternatively, the following was defined: Too many switching operations have occurred at the F-DI. Via PROFIsafe, STO was too frequently initiated (also as subsequent response). 1001, 1002: Initialization error, change timer / check timer. 2000: Status of the STO selection for both monitoring channels are different. 2001: Feedback of the safe pulse suppression on the two monitoring channels are different. 6000 6999: Error in the PROFIsafe control. For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions. The significance of the individual message values is described in safety message C01711. Re fault values 1 999 described in "Cause": check the cross data comparison that resulted in a STOP F. carry out a POWER ON (power off/on). For fault value = 1000: check the wiring of the F-DI (contact problems). PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller. Re fault value = 1001, 1002: carry out a POWER ON (power off/on).
	Re fault value = 2000, 2001, 2002, 2004, 2005:
	 check the tolerance time F-DI changeover and if required, increase the value (p9650/p9850). check the wiring of the F-DI (contact problems).
	- check the causes of the STO selection in r9772. When the SI Motion functions are active (p9501 = 1), STO can also be selected using these functions.
	Re fault value = 6000 6999:
	Refer to the description of the message values in safety message C01711. Re fault values that are described in "Cause":
	- carry out a POWER ON (power off/on).
	- contact the Hotline. - replace Control Unit.
	Note:
	F-DI: Failsafe Digital Input STO: Safe Torque Off
N01620 (F, A)	SI P1: Safe Torque Off active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The "Safe Torque Off" (STO) function has been selected on processor 1 using the input terminal and is active. Note: This message does not result in a safety stop response.
Remedy:	Not necessary.
-	Note:
	STO: Safe Torque Off
F01625	SI P1: Sign-of-life error in safety data
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive-integrated "Safety Integrated" function on processor 1 has detected an error in the sign-of-life of the safety data and initiated a STOP A.
Remedy:	 there is a communication error between processor 1 and processor 2 or communication has failed. a time slice overflow of the safety software has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. select Safe Torque Off and de-select again.
	 carry out a POWER ON (power off/on). check whether additional faults are present and if required, perform diagnostics. check the electrical cabinet design and cable routing for EMC compliance

F01649	SI P1: Internal software error
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	An internal error in the Safety Integrated software on processor 1 has occurred. Note:
	This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 carry out a POWER ON (power off/on). re-commission the "Safety Integrated" function and carry out a POWER ON. contact the Hotline. replace Control Unit.
F01650	SI P1: Acceptance test required
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive-integrated "Safety Integrated" function on processor 1 requires an acceptance test. Note: This fault results in a STOP A that can be acknowledged. Fault value (r0949, interpret decimal):
	130: Safety parameters for processor 2 not available.
	Note:
	This fault value is always output when Safety Integrated is commissioned for the first time. 1000: Reference and actual checksum on processor 1 are not identical (booting).
	- at least one checksum-checked piece of data is defective.
	2000: Reference and actual checksum on processor 1 are not identical (commissioning mode). - reference checksum incorrectly entered on processor 1 (p9799 not equal to r9798). 2001: Reference and actual checksum on processor 2 are not identical (commissioning mode).
	- reference checksum incorrectly entered on processor 2 (p9899 not equal to r9898). 2002: Enable of safety-related functions between the processor 1 and processor 2 differ (p9601 not equal to p9801). 2003: Acceptance test is required as a safety parameter has been changed.
	2004: An acceptance test is required because a project with enabled safety-functions has been downloaded. 2005: The Safety logbook has identified that a functional safety checksum has changed. An acceptance test is required.
	2020: Error when saving the safety parameters for the processor 2. 9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.
Remedy:	For fault value = 130:
······,	- carry out safety commissioning routine.
	For fault value = 1000:
	- again carry out safety commissioning routine.
	 replace the memory card or Control Unit. Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate settings). For fault value = 2000:
	- check the safety parameters on processor 1 and adapt the reference checksum (p9799). For fault value = 2001:
	- check the safety parameters on processor 2 and adapt the reference checksum (p9899). For fault value = 2002:
	 enable the safety-related functions on processor 1 and check processor 2 (p9601 = p9801). Re fault value = 2003, 2004, 2005:
	 Carry out an acceptance test and generate an acceptance report. The fault with fault value 2005 can only be acknowledged when the "STO" function is de-selected. For fault value = 2020:
	- again carry out safety commissioning routine. - replace the memory card or Control Unit.
	For fault value = 9999: - carry out diagnostics for the other safety-related fault that is present.

	Note: STO: Safe Torque Off See also: p9799 (SI setpoint checksum SI parameters (processor 1)), p9899 (SI setpoint checksum SI parameters (processor 2))
F01651	SI P1: Synchronization safety time slices unsuccessful
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The "Safety Integrated" function requires synchronization of the safety time slices between processor 1 and processor 2. This synchronization was unsuccessful. Note:
	This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on).
F01653	SI P1: PROFIBUS/PROFINET configuration error
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	There is a PROFIBUS/PROFINET configuration error for using Safety Integrated monitoring functions with a higher- level control. Note:
	For safety functions that have been enabled, this fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret decimal):
	200: A safety slot for receive data from the control has not been configured.
	210, 220: The configured safety slot for the receive data from the control has an unknown format. 230: The configured safety slot for the receive data from the F-PLC has the incorrect length.
	231: The configured safety slot for the receive data from the F-PLC has the incorrect length.
	250: A PROFIsafe slot is configured in the higher-level F control, however PROFIsafe is not enabled in the drive.
	300: A safety slot for the send data to the control has not been configured. 310, 320: The configured safety slot for the send data to the control has an unknown format.
	330: The configured safety slot for the send data to the F-PLC has the incorrect length.
	331: The configured safety slot for the send data to the F-PLC has the incorrect length.
Remedy:	The following generally applies: - check and, if necessary, correct the PROFIBUS/PROFINET configuration of the safety slot on the master side. - upgrade the Control Unit software. For fault value = 250:
	- remove the PROFIsafe configuring in the higher-level F control or enable PROFIsafe in the drive.
	Re fault value = 231, 331:
	 - configure the PROFIsafe telegram matching the parameterization in the F-PLC. If F-DI is enabled via PROFIsafe the following applies: PROFIsafe telegram 900 must be configured.
	If F-DI is not enabled via PROFIsafe the following applies: PROFIsafe telegram 30 must be configured.
A01654 (F)	SI P1: Deviating PROFIsafe configuration
Reaction:	NONE
Acknowledge:	NONE
Cause:	The configuration of a PROFIsafe telegram in the higher-level control (F-PLC) does not match the parameterization in the drive. Note:
	This message does not result in a safety stop response. Alarm value (r2124, interpret decimal): 1:
	A PROFIsafe telegram is configured in the higher-level control, however PROFIsafe is not enabled in the drive (p9601.3).
	2: PROFIsafe is parameterized in the drive; however, a PROFIsafe telegram has not been configured in the higher- level control.

Remedy:	The following generally applies: - check and, if necessary, correct the PROFIsafe configuration in the higher-level control. Re alarm value = 1: - remove the PROFIsafe configuring in the higher-level F control or enable PROFIsafe in the drive. Re alarm value = 2: - configure the PROFIsafe telegram to match the parameterization in the higher-level F-control.
F01655	SI P1: Align monitoring functions
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	An error has occurred when aligning the Safety Integrated monitoring functions on processor 1 and processor 2. No common set of supported SI monitoring functions was able to be determined. - there is a communication error between processor 1 and processor 2 or communication has failed. Note: This fault results in a STOP A that cannot be calculated.
	This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 - carry out a POWER ON (power off/on). - check the electrical cabinet design and cable routing for EMC compliance
F01656	SI P1: Parameter processor 2 parameter error
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	 When accessing the Safety Integrated parameters for the processor 2 in the non-volatile memory, an error has occurred. Note: This fault results in a STOP A that can be acknowledged. Fault value (r0949, interpret decimal): 129: Safety parameters for processor 2 corrupted. 131: Internal software error 132: Communication errors when uploading or downloading the safety parameters. 255: Internal software error on the Control Unit.
Remedy:	 re-commission the safety functions. replace the memory card or Control Unit. For fault value = 129: activate the safety commissioning mode (p0010 = 95). adapt the PROFIsafe address (p9610). start the copy function for SI parameters (p9700 = D0 hex). acknowledge data change (p9701 = DC hex). exit the safety commissioning mode (p0010 = 0). save all parameters (p0971 = 1 or "copy RAM to ROM"). carry out a POWER ON (power off/on) for the Control Unit. For fault value = 132: check the electrical cabinet design and cable routing for EMC compliance
F01659	SI P1: Write request for parameter rejected
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	 The write request for one or several Safety Integrated parameters on processor 1 was rejected. Note: This fault does not result in a safety stop response. Fault value (r0949, interpret decimal): The Safety Integrated password is not set. A reset of the drive parameters was selected. However, the Safety Integrated parameters were not reset, as Safety Integrated is presently enabled. The interconnected STO input is in the simulation mode. An attempt was made to enable the STO function although this cannot be supported. An attempt was made to enable the PROFIsafe communications although this cannot be supported.
	18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported.

Cause:	The Power Module does not support the safety-related functions. Safety Integrated cannot be commissioned.

F01665	SI P1: System is defective
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A system defect was detected before the last boot or in the actual one. The system might have been rebooted (reset). Fault value (r0949, interpret hexadecimal): 200000 hex, 400000 hex, 8000yy hex (yy any): - Fault in the actual booting/operation. 800004 hex:
	 Parameters p9500/p9300 are, under certain circumstances, not the same. In addition, Safety message C01711/C30711 is displayed. Additional values: defect before the last time that the system booted.
Remedy:	- carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline. Re fault value = 200000 hex, 400000 hex, 8000yy hex (yy any):
	- ensure that the Control Unit is connected to the Power Module.
	Re fault value = 800004 hex:
	- Check that parameters p9500/p9300 are the same.
A01669 (F, N)	SI Motion: Unfavorable combination of motor and power unit
Reaction:	NONE
Acknowledge:	NONE
Cause:	The combination of motor and power unit used is not suitable for using safe motion monitoring functions without an
	encoder. The ratio between the power unit rated current (r0207[0]) and rated motor current (p0305) is greater than 5.
	Alarm value (r2124, interpret decimal): Number of the motor data set, which caused the fault.
	Notice:
	If this alarm is not observed, then message C01711 or C30711 – with the value 1041 1044 – can sporadically occur.
Remedy:	Use a suitable power unit with a lower power rating or a motor with a higher power rating.
A01698 (F)	SI P1: Commissioning mode active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The commissioning of the "Safety Integrated" function is selected. This message is withdrawn after the safety functions have been commissioned.
	Note: - This message does not result in a safety stop response.
	- In the safety commissioning mode, the "STO" function is internally selected. See also: p0010 (Drive commissioning parameter filter)
Remedy:	Not necessary.
A01699 (F)	SI P1: Shutdown path must be tested
Reaction:	NONE
Acknowledge:	NONE
Cause:	The time set in p9659 for the forced checking procedure of the safety shutdown paths has been exceeded. The
	safety shutdown paths must be re-tested. After the next time the "STO" function is de-selected, the message is withdrawn and the monitoring time is reset. Note:
	 This message does not result in a safety stop response. The test must be performed within a defined, maximum time interval (p9659, maximum of 9000 hours) in order to comply with the requirements as laid down in the standards for timely fault detection and the conditions to calculate the failure rates of safety functions (PFH value). Operation beyond this maximum time period is permissible if it can be ensured that the forced checking procedure is performed before persons enter the hazardous area and who are
	depending on the safety functions correctly functioning. See also: p9659 (SI forced checking procedure timer)

Remedy:	Select STO and then de-select again. Note: STO: Safe Torque Off
A01796 (F, N)	SI CU: Wait for communication
Reaction:	NONE
Acknowledge:	NONE The drive weith for a second state is a state is the second state of the second s
Cause:	The drive waits for communication to be established to execute the safety-relevant motion monitoring functions. Note:
	In this state, the pulses are safely suppressed. Alarm value (r2124, interpret decimal): 3: Wait for communication to be established to PROFIsafe F-Host.
Remedy:	 If, after a longer period of time, the message is not automatically withdrawn, the following checks have to be made: Check any other PROFIsafe communication messages/signals present and evaluate them. check the operating state of the F-Host. Check the communication connection to the F Host. See also: p9601 (SI enable, functions integrated in the drive (processor 1)), p9801 (SI enable, functions integrated in the drive (processor 2))
A01900 (F)	PROFIBUS: Configuration telegram error
Reaction:	NONE
Acknowledge:	NONE
Cause:	A PROFIBUS master attempts to establish a connection using an incorrect configuring telegram.
	 Alarm value (r2124, interpret decimal): 2: Too many PZD data words for input or output. The number of possible PZD is specified by the number of indices in r2050/p2051. 3: Uneven number of bytes for input or output. 501: PROFIsafe parameter error (e.g. F_dest).
Remedy:	Check the bus configuration on the master and the slave sides. Re alarm value = 2: Check the number of data words for input and output. Re alarm value = 501: Check the set PROFIsafe address (p9610).
F01910 (N, A)	Fieldbus interface setpoint timeout
Reaction:	OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The reception of setpoints from the fieldbus interface has been interrupted. - bus connection interrupted. - communication partner switched off. For PROFIBUS: - PROFIBUS master set into the STOP state. See also: p2047 (PROFIBUS additional monitoring time)
Remedy:	Ensure bus connection has been established and switch on communication peer. - if required, adapt p2040. For PROFIBUS: - set the PROFIBUS master to the RUN state. - slave redundancy: For operation on a Y link, it must be ensured that "DP alarm mode = DPV1" is set in the slave parameterization. See also: p2047 (PROFIBUS additional monitoring time)
A01920 (F)	PROFIBUS: Interruption cyclic connection
Reaction:	NONE
Acknowledge:	NONE
Cause:	The cyclic connection to the PROFIBUS master is interrupted.
Remedy:	Establish the PROFIBUS connection and activate the PROFIBUS master in the cyclic mode.

A01945	PROFIBUS: Connection to the Publisher failed
Reaction:	NONE
Acknowledge:	NONE
Cause:	For PROFIBUS peer-to-peer data transfer, the connection to at least one Publisher has failed.
	Alarm value (r2124, interpret binary): Bit 0 = 1: Publisher with address in r2077[0], connection failed.
Domoduu	Bit 15 = 1: Publisher with address in r2077[15], connection failed. Check the PROFIBUS cables.
Remedy:	See also: r2077 (PROFIBUS diagnostics peer-to-peer data transfer addresses)
F01946 (A)	PROFIBUS: Connection to the Publisher aborted
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The connection to at least one Publisher for PROFIBUS peer-to-peer data transfer in cyclic operation has been
	aborted.
	Fault value (r0949, interpret binary): Bit 0 = 1: Publisher with address in r2077[0], connection aborted.
	Dit 0 – 1. Publisher with address in 12077[0], connection aborted.
	Bit 15 = 1: Publisher with address in r2077[15], connection aborted.
Remedy:	- check the PROFIBUS cables.
	- check the state of the Publisher that has the aborted connection.
	See also: r2077 (PROFIBUS diagnostics peer-to-peer data transfer addresses)
F01951	CU SYNC: Synchronization application clock cycle missing
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	Internal synchronization of the application cycles unsuccessful. Fault value (r0949, interpret decimal):
	Only for internal Siemens troubleshooting.
Remedy:	 carry out a POWER ON (power off/on) for all components. upgrade the Control Unit software.
A01953	CU SYNC: Synchronization not completed
Reaction:	NONE
Acknowledge:	NONE
Cause:	After the drive system was powered up, synchronization between the basic clock cycle and application clock cycle
	was started but was not completed within the selected time tolerance.
	Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
Demoden	Carry out a POWER ON (power off/on).
Remedy:	
	Trace: Start not possible
A02050	Trace: Start not possible
A02050 Reaction:	NONE
A02050 Reaction: Acknowledge:	NONE
A02050 Reaction:	NONE
A02050 Reaction: Acknowledge: Cause: Remedy:	NONE NONE The trace has already been started. Stop the trace and, if necessary, start again.
A02050 Reaction: Acknowledge: Cause: Remedy: A02055	NONE NONE The trace has already been started. Stop the trace and, if necessary, start again. Trace: Recording time too short
A02050 Reaction: Acknowledge: Cause: Remedy: A02055 Reaction:	NONE NONE The trace has already been started. Stop the trace and, if necessary, start again. Trace: Recording time too short NONE
A02050 Reaction: Acknowledge: Cause: Remedy: A02055 Reaction: Acknowledge:	NONE NONE The trace has already been started. Stop the trace and, if necessary, start again. Trace: Recording time too short NONE NONE
A02050 Reaction: Acknowledge: Cause: Remedy: A02055 Reaction:	NONE NONE The trace has already been started. Stop the trace and, if necessary, start again. Trace: Recording time too short NONE

A02056	Trace: Recording cycle too short
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected recording clock cycle is lower than the basic clock cycle 500µs.
Remedy:	Increase the value for the trace cycle.
A02057	Trace: Time slice clock cycle invalid
Reaction:	NONE
Acknowledge:	NONE
Cause:	The time slice clock cycle selected does not match any of the existing time slices.
Remedy:	Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.
A02058	Trace: Time slice clock cycle for endless trace not valid
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected time slice clock cycle cannot be used for the endless trace
Remedy:	Enter the clock cycle of an existing time slice with a cycle time >= 2 ms for up to 4 recording channels or >= 4 ms
	from 5 recording channels per trace.
	The existing time slices can be read out via p7901.
A02059	Trace: Time slice clock cycle for 2 x 8 recording channels not valid
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected time slice clock cycle cannot be used for more than 4 recording channels.
Remedy:	Enter the clock cycle of an existing time slice with a cycle time >= 4 ms or reduce the number of recording channels
	to 4 per trace. The existing time slices can be read out via p7901.
A02060	Trace: Signal to be traced missing
Reaction:	NONE
Acknowledge:	NONE
Cause:	- a signal to be traced was not specified.
	- the specified signals are not valid.
Remedy:	- specify the signal to be traced.
	- check whether the relevant signal can be traced.
A02061	Trace: Invalid signal
Reaction:	NONE
Acknowledge:	NONE
Cause:	 the specified signal does not exist. the specified signal can no longer be traced (recorded).
Remedy:	- specify the signal to be traced. - check whether the relevant signal can be traced.
A02062	Trace: Invalid trigger signal
Reaction:	NONE
Acknowledge:	NONE
Cause:	- a trigger signal was not specified.
	- the specified signal does not exist.
	 the specified signal is not a fixed-point signal. the specified signal cannot be used as a trigger signal for the trace.
Remedy:	Specify a valid trigger signal.
·····	-r · · · · · · · · · · · · · · · · · · ·

	The set have the data to be
A02063	Trace: Invalid data type
Reaction:	NONE
Acknowledge:	
Cause:	The specified data type to select a signal using a physical address is invalid.
Remedy:	Use a valid data type.
A02070	Trace: Parameter cannot be changed
Reaction:	NONE
Acknowledge:	NONE
Cause:	The trace parameter settings cannot be changed when the trace is active.
Remedy:	- stop the trace before parameterization. - if required, start the trace.
A02075	Trace: Pretrigger time too long
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected pretrigger time must be shorter than the trace time.
Remedy:	Check the pretrigger time setting and change if necessary.
F02080	Trace: Parameterization deleted due to unit changeover
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The trace parameterization in the drive unit was deleted due to a unit changeover or a change in the reference
ouuse.	parameters.
Remedy:	Restart trace.
A02099	Trace: Insufficient Control Unit memory
Reaction:	NONE
Acknowledge:	NONE
Cause:	The memory space still available on the Control Unit is no longer sufficient for the trace function.
Remedy:	Reduce the memory required, e.g. as follows:
	- reduce the trace time.
	- increase the trace clock cycle.
	- reduce the number of signals to be traced.
A02150	OA: Application cannot be loaded
Reaction:	NONE
Acknowledge:	NONE
Cause:	The system was not able to load an OA application.
	Alarm value (r2124, interpret hexadecimal):
Bomodu	Only for internal Siemens troubleshooting.
Remedy:	 - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version.
	- contact the Hotline.
	Note:
	OA: Open Architecture
F02151 (A)	OA: Internal software error
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	An internal software error has occurred within an OA application.
	Fault value (r0949, interpret hexadecimal):
	Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components.
	- upgrade firmware to later version.

	- contact the Hotline. - replace the Control Unit.
	Note:
	OA: Open Architecture
F02152 (A)	OA: Insufficient memory
Reaction:	OFF1
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	Too many functions have been configured on this Control Unit (e.g. too many drives, function modules, data sets, OA applications, blocks, etc). Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	 - change the configuration on this Control Unit (e.g. fewer drives, function modules, data sets, OA applications, blocks, etc). - use an additional Control Unit. Note: OA: Open Architecture
F00000	•
F03000	NVRAM fault on action
Reaction:	
Acknowledge: Cause:	IMMEDIATELY A fault occurred during execution of action p7770 = 1, 2 for the NVRAM data.
00030.	Fault value (r0949, interpret hexadecimal):
	yyxx hex: yy = fault cause, xx = application ID
	yy = 1: The action p7770 = 1 is not supported by this version if Drive Control Chart (DCC) is activated for the drive object
	concerned.
	yy = 2:
	The data length of the specified application is not the same in the NVRAM and the backup.
	yy = 3: The data checksum in p7774 is not correct.
	yy = 4:
	No data available to load.
Remedy:	Perform the remedy according to the results of the troubleshooting. If necessary, start the action again.
F03001	NVRAM checksum incorrect
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A checksum error occurred when evaluating the non-volatile data (NVRAM) on the Control Unit. The NVRAM data affected was deleted.
Remedy:	Carry out a POWER ON (power off/on) for all components.
F03505 (N, A)	CU: Analog input wire breakage
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The wire-break monitoring for an analog input has responded. The input current of the analog input has undershot the threshold value parameterized in p0761[03]. p0756[0]: analog input 0 (only CU240D-2) p0756[1]: analog input 1 (only CU240D-2) Fault value (r0949, interpret decimal):
	yxxx dec y = analog input (0 = analog input 0 (AI 0), 1 = analog input 1 (AI 1)) xxx = component number (p0151) Note:
	For the following analog input type, the wire breakage monitoring is active: p0756[01] = 1 (2 10 V with monitoring)
Remedy:	Check the connection to the signal source for interruptions. Check the magnitude of the injected current - it is possible that the infed signal is too low. The input current measured by the analog input can be read in r0752[x].

A03510 (F, N)	CU: Calibration data not plausible
Reaction:	NONE
Acknowledge:	NONE
Cause:	During booting, the calibration data for the analog inputs is read and checked with respect to plausibility. At least one calibration data point was determined to be invalid.
Remedy:	 power down/power up the power supply for the Control Unit. If it reoccurs, replace the module. In principle, operation could continue. The analog channel involved possibly does not achieve the specified accuracy.
A05000 (N)	Power unit: Overtemperature heat sink AC inverter
Reaction:	NONE
Acknowledge:	NONE
Cause:	The alarm threshold for overtemperature at the inverter heat sink has been reached. The response is set using p0290.
Remedy:	If the temperature of the heat sink increases by an additional 5 K, then fault F30004 is initiated. Check the following:
	- is the ambient temperature within the defined limit values?
	 have the load conditions and the load duty cycle been appropriately dimensioned? has the cooling failed?
A05001 (N)	Power unit: Overtemperature depletion layer chip
Reaction:	NONE
Acknowledge:	NONE
Cause:	Alarm threshold for overtemperature of the power semiconductor in the AC converter has been reached.
	Note:
	 The response is set using p0290. If the depletion layer temperature increases by an additional 15 K, then fault F30025 is triggered.
Remedy:	Check the following:
	- is the ambient temperature within the defined limit values?
	- have the load conditions and the load duty cycle been appropriately dimensioned?
	- has the cooling failed?
	- pulse frequency too high? See also: r0037 (Power unit temperatures), p0290 (Power unit overload response)
A05002 (N)	Power unit: Air intake overtemperature
Reaction:	NONE
Acknowledge:	
Cause:	For chassis power units, the following applies: The alarm threshold for the air intake overtemperature has been reached. For air-cooled power units, the threshold
	is 42 °C (hysteresis 2 K). The response is set using p0290.
	If the air intake temperature increases by an additional 13 K, then fault F30035 is output.
Remedy:	Check the following:
	 is the ambient temperature within the defined limit values? has the fan failed? Check the direction of rotation.
	- has the fair failed? Check the direction of rotation.
A05004 (N)	Power unit: Rectifier overtemperature
Reaction:	NONE
Acknowledge:	NONE
Cause:	The alarm threshold for the overtemperature of the rectifier has been reached. The response is set using p0290. If the temperature of the rectifier increases by an additional 5 K, then fault F30037 is triggered.
Remedy:	Check the following:
	 is the ambient temperature within the defined limit values? have the load conditions and the load duty cycle been appropriately dimensioned?
	- has the fan failed? Check the direction of rotation.
	- has a phase of the line supply failed?
	- is an arm of the supply (incoming) rectifier defective?

Power unit: Overtemperature thermal model
NONE
NONE
The temperature difference between the chip and heat sink has exceeded the permissible limit value (blocksize power units only).
Depending on p0290, an appropriate overload response is initiated. See also: r0037 (Power unit temperatures)
Not necessary. The alarm disappears automatically once the limit value is undershot.
Note:
If the alarm does not disappear automatically and the temperature continues to rise, this can result in fault F3002. See also: p0290 (Power unit overload response)
Supply voltage (p0210) incorrectly parameterized
NONE (OFF1, OFF2)
IMMEDIATELY (POWER ON)
The measured DC voltage lies outside the tolerance range after pre-charging has been completed. The following applies for the tolerance range: 1.16 * p0210 < r0070 < 1.6 * p0210 Note:
The fault can only be acknowledged when the drive is powered down. See also: p0210 (Drive unit line supply voltage)
- check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage. See also: p0210 (Drive unit line supply voltage)
Braking resistor phase unsymmetry
NONE
NONE
The three resistors of the braking chopper are not symmetrical.
 check the feeder cables to the braking resistors. If required, increase the value for detecting dissymmetry (p1364).
Braking resistor phase failure
NONE
IMMEDIATELY
A phase failure for the brake resistor was detected. Fault value (r0949, interpret decimal): 11: Phase U
12: Phase V 13: Phase W
Check the feeder cables to the braking resistors.
Drive: Motor overtemperature
OFF2 (NONE, OFF1, OFF3, STOP2)
IMMEDIATELY
KTY:
The motor temperature has exceeded the fault threshold (p0605). The response parameterized in p0610 become
active. PTC or bimetallic NC contact:
The response threshold of 1650 Ohm was exceeded or the NC contact opened. The response parameterized in p0610 becomes active.
Possible causes: - Motor is overloaded
- motor ambient temperature too high.
- Wire break or sensor not connected
Fault value (r0949, interpret decimal):
See also: p0604 (Mot_temp_mod 1/KTY alarm threshold), p0605 (Mot_temp_mod 1/2 threshold), p0625 (Motor ambient temperature)

Remedy:	 Reduce the motor load. check the ambient temperature and the motor ventilation. check the wiring and the connection of the PTC or bimetallic NC contact. See also: p0604 (Mot_temp_mod 1/KTY alarm threshold), p0605 (Mot_temp_mod 1/2 threshold), p0625 (Motor ambient temperature)
A07012 (N)	Drive: Motor temperature model 1/3 overtemperature
Reaction:	NONE
Acknowledge:	NONE
Cause:	The thermal I2t motor model for synchronous motors identified that the alarm threshold was exceeded. See also: r0034 (Motor utilization), p0605 (Mot_temp_mod 1/2 threshold), p0611 (I2t motor model thermal time constant)
Remedy:	 - check the motor load and if required, reduce. - check the motor ambient temperature. - check the thermal time constant (p0611). - check the alarm threshold for motor temperature model 1 (l2t) (p0605). See also: r0034 (Motor utilization), p0605 (Mot_temp_mod 1/2 threshold), p0611 (l2t motor model thermal time constant)
A07015	Drive: Motor temperature sensor alarm
Reaction:	NONE
Acknowledge:	NONE
Cause:	An error was detected when evaluating the temperature sensor set in p0601. A timer is started with the error. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 0.2 s after alarm A07015. Possible causes: - wire breakage or sensor not connected (KTY: R > 2120 Ohm).
Demoden	- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Remedy:	 make sure that the sensor is connected correctly. check the parameterization (p0601). See also: r0035 (Motor temperature), p0601 (Motor temperature sensor type)
F07016	Drive: Motor temperature sensor fault
Reaction:	OFF1 (NONE, OFF2, OFF3, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	An error was detected when evaluating the temperature sensor set in p0601. Possible causes: - wire breakage or sensor not connected (KTY: R > 2120 Ohm).
	- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm). Note:
	If alarm A07015 is present, a timer is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 0.2 s after alarm A07015.
Remedy:	 make sure that the sensor is connected correctly. check the parameterization (p0601). See also: r0035 (Motor temperature), p0601 (Motor temperature sensor type)
F07080	Drive: Incorrect control parameter
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The closed-loop control parameters have been parameterized incorrectly (e.g. p0356 = L_spread = 0). Fault value (r0949, interpret decimal): The fault value includes the parameter number involved. The following parameter numbers only occur as fault values for vector drives: p0310, for synchronous motors: p0341, p0344, p0350, p0357 The following parameter numbers do not occur as fault values for synchronous motors: p0354, p0358, p0360 See also: p0310, p0311, p0341, p0344, p0350, p0354, p0356, p0357, p0358, p0360, p0640, p1082, p1300
Remedy:	Modify the parameter indicated in the fault value (r0949) (e.g. $p0640 = current limit > 0$). See also: $p0311$, $p0341$, $p0344$, $p0350$, $p0354$, $p0356$, $p0358$, $p0360$, $p0640$, $p1082$

Faults and alarms

F07082	Macro: Execution not possible
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The macro cannot be executed. Fault value (r0949, interpret hexadecimal): ccccbbaa hex:
	cccc = preliminary parameter number, bb = supplementary information, aa = fault cause Fault causes for the trigger parameter itself:
	19: Called file is not valid for the trigger parameter.
	20: Called file is not valid for parameter 15. 21: Called file is not valid for parameter 700.
	22: Called file is not valid for parameter 1000.
	23: Called file is not valid for parameter 1500.
	24: Data type of a TAG is incorrect (e.g. Index, number or bit is not U16).
	Fault causes for the parameters to be set: 25: Error level has an undefined value.
	26: Mode has an undefined value.
	27: A value was entered as string in the tag value that is not "DEFAULT". 31: Entered drive object type unknown.
	32: A device was not able to be found for the determined drive object number.
	34: A trigger parameter was recursively called.
	 35: It is not permissible to write to the parameter via macro. 36: Check, writing to a parameter unsuccessful, parameter can only be read, not available, incorrect data type, value
	range or assignment incorrect.
	37: Source parameter for a BICO interconnection was not able to be determined.
	38: An index was set for a non-indexed (or CDS-dependent) parameter.
	 39: No index was set for an indexed parameter. 41: A bit operation is only permissible for parameters with the parameter format DISPLAY_BIN.
	42: A value not equal to 0 or 1 was set for a BitOperation.
	43: Reading the parameter to be changed by the BitOperation was unsuccessful.
	51: Factory setting for DEVICE may only be executed on the DEVICE.61: The setting of a value was unsuccessful.
Remedy:	- check the parameter involved.
	- check the macro file and BICO interconnection.
	See also: p0015 (Macro drive unit), p1000 (Speed setpoint selection)
F07083	Macro: ACX file not found
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The ACX file (macro) to be executed was not able to be found in the appropriate directory. Fault value (r0949, interpret decimal):
	Parameter number with which the execution was started. See also: p0015 (Macro drive unit), p1000 (Speed setpoint selection)
Remedy:	- check whether the file is saved in the appropriate directory on the memory card.
F07084	Macro: Condition for WaitUntil not fulfilled
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The WaitUntil condition set in the macro was not fulfilled in a certain number of attempts. Fault value (r0949, interpret decimal): Parameter number for which the condition was set.
Remedy:	Check and correct the conditions for the WaitUntil loop.
F07086	Units changeover: Parameter limit violation due to reference value change
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A reference parameter was changed in the system. This resulted in the fact that for the parameters involved, the selected value was not able to be written in the per unit notation.

	The values of the parameters were set to the corresponding violated minimum limit/maximum limit or to the factory
	setting. Possible causes:
	- the steady-state minimum limit/maximum limit or that defined in the application was violated.
	Fault value (r0949, parameter):
	Diagnostics parameter to display the parameters that were not able to be re-calculated. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
Remedy:	Check the adapted parameter value and if required correct.
F07088	Units changeover: Parameter limit violation due to units changeover
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A changeover of units was initiated. This resulted in a violation of a parameter limit
	Possible causes for the violation of a parameter limit:
	- When rounding off a parameter corresponding to its decimal places, the steady-state minimum limit or maximum
	limit was violated inaccuracies for the data type "FloatingPoint".
	In these cases, when the minimum limit is violated then the parameter value is rounded up and when the maximum
	limited is violated the parameter value is rounded down.
	Fault value (r0949, interpret decimal):
	Diagnostics parameter to display all parameters whose value had to be adapted.
Remedy:	See also: p0100 (IEC/NEMA mot stds), p0505 (Selecting the system of units), p0595 (Technological unit selection) Check the adapted parameter values and if required correct.
Remeay.	Check the adapted parameter values and in required correct.
A07089	Changing over units: Function module activation is blocked because the units have
	been changed over
Reaction:	NONE
Acknowledge:	NONE
Cause:	An attempt was made to activate a function module. This is not permissible if the units have already been changed
	OVER.
Pomodu:	See also: p0100 (IEC/NEMA mot stds), p0505 (Selecting the system of units)
Remedy:	Restore units that have been changed over to the factory setting.
A07200	Drive: Master control ON command present
Reaction:	NONE
Acknowledge:	NONE
Cause:	The ON/OFF1 command is present (no 0 signal).
	The command is either influenced via binector input p0840 (current CDS) or control word bit 0 via the master control.
Remedy:	Switch the signal via binector input p0840 (current CDS) or control word bit 0 via the master control to 0.
F07220 (N, A)	Drive: Master control by PLC missing
Reaction:	OFF1 (NONE, OFF2, OFF3, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The "master control by PLC" signal was missing in operation.
	- interconnection of the binector input for "master control by PLC" is incorrect (p0854).
	 the higher-level control has withdrawn the "master control by PLC" signal. data transfer via the fieldbus (master/drive) was interrupted.
Remedy:	- check the interconnection of the binector input for "master control by PLC" (p0854).
	- check the "master control by PLC" signal and, if required, switch in.
	- check the data transfer via the fieldbus (master/drive).
	Note: If the drive should continue to operate after withdrawing "master control by DLC" then foult reasons a must be
	If the drive should continue to operate after withdrawing "master control by PLC" then fault response must be parameterized to NONE or the message type should be parameterized as alarm.

F07320	Drive: Automatic restart interrupted
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	 The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt. there is no active ON command. the monitoring time for the power unit has expired. when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	 - increase the number of restart attempts (p1211). - increase the delay time in p1212 and/or the monitoring time in p1213. - issue an ON command (p0840). - Reduce the delay time for resetting the start counter p1213[1] so that fewer faults are registered in the time interval
A07321	Drive: Automatic restart active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The automatic restart (AR) is active. When the line supply returns and/or the causes of the existing faults are removed the drive is automatically restarted. The pulses are enabled and the motor starts to rotate. For p1210 = 26, the alarm after the line supply returns is also displayed if there is no fault and there is no ON command. Restarting is realized with the delayed setting of the ON command.
Remedy:	 the automatic restart (AR) should, if required, be inhibited (p1210 = 0). an automatic restart can be directly interrupted by withdrawing the power-on command (BI: p0840). for p1210 = 26: by withdrawing the OFF2- / OFF3 control commands.
F07330	Flying restart: Measured search current too low
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	During a flying restart, it was identified that the search current reached is too low. It is possible that the motor is not connected.
Remedy:	Check the motor feeder cables.
F07331	Flying restart: Function not supported
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	It is not possible to power up with the motor rotating (no flying restart). In the following cases, the "flying restart" function is not supported: Permmagnet synch. motors (PEM): operation with U/f char. and sensorless vector control.
Remedy:	De-activate the "flying restart" function (p1200 = 0).
A07400 (N)	Drive: DC link voltage maximum controller active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The DC link voltage controller has been activated because the upper switch-in threshold has been exceeded (r1242 r1282).
	The ramp-down times are automatically increased in order to maintain the DC link voltage (r0070) within the permissible limits. There is a system deviation between the setpoint and actual speeds. When the DC link voltage controller is switched out (disabled), this is the reason that the ramp-function generator output is set to the speed actual value. See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller configuration (vector control)), p1280 (Vdc controller configuration (U/f))
Remedy:	If the controller is not to intervene: - increase the ramp-down times. - switch-off the Vdc_max controller (p1240 = 0 for vector control, p1280 = 0 for U/f control).

	If the ramp-down times are not to be changed: - use a chopper or regenerative feedback unit.
A07401 (N)	Drive: DC link voltage maximum controller de-activated
Reaction:	NONE
Acknowledge:	NONE
Cause:	The Vdc_max controller can no longer maintain the DC link voltage (r0070) below the limit value (r1242, r1282) and was therefore switched out (disabled).
	 the line supply voltage is permanently higher than specified for the power unit. the motor is permanently in the regenerative mode as a result of a load that is driving the motor.
Remedy:	 check whether the input voltage is within the permissible range. check whether the load duty cycle and load limits are within the permissible limits.
A07402 (N)	Drive: DC link voltage minimum controller active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The DC link voltage controller has been activated as the lower switch-in threshold has been undershot (r1246, r1286).
	The kinetic energy of the motor is used to buffer the DC link. The drive is therefore braked. See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller configuration (vector control)), p1280 (Vdc controller configuration (U/f))
Remedy:	The alarm disappears when power supply returns.
F07405 (N, A)	Drive: Kinetic buffering minimum speed not reached
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	During kinetic buffering the speed fell below minimum speed (p1257 or p1297 for vector drives with U/f control) and the line supply did not return.
Remedy:	Check the speed threshold for the Vdc_min controller (kinetic buffering) (p1257, p1297). See also: p1257 (Vdc_min controller speed threshold)
F07406 (N, A)	Drive: Kinetic buffering maximum time exceeded
Reaction:	OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The maximum buffer time (p1255 and p1295 for vector drives with U/f control) has been exceeded without the line supply having returned.
Remedy:	Check the time threshold for Vdc-min controller (kinetic buffering) (p1255, p1295). See also: p1255 (Vdc_min controller time threshold)
A07409	Drive: U/f control, current limiting controller active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The current limiting controller of the U/f control was activated because the current limit was exceeded.
Remedy:	The alarm automatically disappears after one of the following measures: - increase current limit (p0640). - reduce the load.
	- slow down the ramp up to the setpoint speed.
F07410	Drive: Current controller output limited
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	The condition "I_act = 0 and Uq_set_1 longer than 16 ms at its limit" is present and can be caused by the following: - motor not connected or motor contactor open. - motor data and motor configuration (star-delta) do not match. - no DC link voltage present.
	- power unit defective. - the "flying restart" function is not activated.

Remedy:	 connect the motor or check the motor contactor. check the motor parameterization and the connection type (star-delta). check the DC link voltage (r0070).
	- check the power unit. - activate the "flying restart" function (p1200).
F07426 (A)	Technology controller actual value limited
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The actual value for the technology controller, interconnected via connector input p2264, has reached a limit. Fault value (r0949, interpret decimal): 1: upper limit reached. 2: lower limit reached.
Remedy:	 - adapt the limits to the signal level (p2267, p2268). - Check the actual value normalization (p0595, p0596). - Deactivate evaluation of the limits (p2252 bit 3) See also: p0595 (Technological unit selection), p0596 (Technological unit reference quantity), p2264 (Technology controller actual value), p2267 (Technology controller upper limit actual value), p2268 (Technology controller lower limit actual value)
A07428 (N)	Technology controller parameterizing error
Reaction:	NONE
Acknowledge:	NONE
Cause:	The technology controller has a parameterizing error. Alarm value (r2124, interpret decimal): 1: The parameter value for the upper output limit of the technology controller p2291 is less than the parameter value of the lower output limit p2292.
Remedy:	1: Set p2291 to a higher value than p2292. See also: p2291 (Technology controller maximum limiting), p2292 (Technology controller minimum limiting)
F07435 (N)	Drive: Setting the ramp-function generator for sensorless vector control
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	During operation with sensorless vector control (r1407.1) the ramp-function generator was stopped (p1141). An internal setting command of the ramp-function generator output caused the set setpoint speed to be frozen.
Remedy:	 de-activate the holding command for the ramp-function generator (p1141). suppress the fault (p2101, p2119). This is necessary if the ramp-function generator is held using jogging and the speed setpoint is simultaneously inhibited (r0898.6).
F07439	Drive: Higher current controller dynamic performance not possible
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	The function "Current controller dynamics higher" (p1810.11 = 1) is selected, however is not supported by the power unit (r0192.27 = 0) or by the safety technology without encoder (9506 = 1, 3). Fault value (r0949, interpret decimal): 1:
	 firmware of the booksize power unit is not up-to-date. blocksize or S120 combi power unit was used. 2:
Romody:	- Encoderless safety technology is used.
Remedy:	In general: - Deselect the function "Current controller dynamics higher" (p1810.11 = 0) and if required, set the current, speed and position controller again or calculate (p0340 = 4). For fault value = 1:
	For fault value = 1: - If necessary, upgrade the firmware of the booksize power unit to a later version (version >= 4.4).

	Noto
	Note: If the firmware has already been automatically upgraded, then only a POWER ON (switch-off/switch-on) is required.
	- Use a booksize power unit (version >= 4.4).
	For fault value = 2: - If an encoder with Safety position actual values sensing is available (r0458[02].19 = 1), reparameterize the
	encoderless safety technology (p9506 = 1, 3) to safety technology with encoder (p9506 = 0).
A07530	Drive: Drive Data Set DDS not present
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected drive data set is not available. The drive data set was not changed over. See also: p0180 (Number of Drive Data Sets (DDS)), p0820 (Drive Data Set selection DDS bit 0), r0837 (Drive Data Set DDS selected)
Remedy:	- select the existing drive data set. - set up additional drive data sets.
A07531	Drive: Command Data Set CDS not present
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected command data set is not available (p0836 > p0170). The command data set was not changed over. See also: p0810 (Command data set selection CDS bit 0), r0836 (Command Data Set CDS selected)
Remedy:	 select the existing command data set. set up additional command data sets.
F07800	Drive: No power unit present
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The power unit parameters cannot be read or no parameters are stored in the power unit. It is possible that the DRIVE-CLiQ cable between the Control Unit and power unit is interrupted or defective. Note:
	This fault also occurs if an incorrect topology was selected in the commissioning software and this parameterization is then downloaded to the Control Unit.
Remedy:	- carry out a POWER ON (power off/on) for all components.
	 check the DRIVE-CLiQ cable between the Control Unit and power unit. Check the power unit and replace if necessary.
	- check the Control Unit, and if required replace it.
	- after correcting the topology, the parameters must be again downloaded using the commissioning software.
F07801	Drive: Motor overcurrent
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The permissible motor limit current was exceeded. - effective current limit set too low.
	- current controller not correctly set.
	- U/f operation: Up ramp was set too short or the load is too high.
	 U/f operation: Short-circuit in the motor cable or ground fault. U/f operation: Motor current does not match current of power unit.
	- Switch to rotating motor without flying restart function (p1200).
	Note:
	Limit current = 2 x minimum (p0640, 4 x p0305 x p0306) >= 2 x p0305 x p0306
Bamadu	
Remedy:	- check the current limits (p0640). - U/f control: Check the current limiting controller (p1340 p1346).
Remedy:	 check the current limits (p0640). U/f control: Check the current limiting controller (p1340 p1346). increase the up ramp (p1120) or reduce the load.
Remedy:	 check the current limits (p0640). U/f control: Check the current limiting controller (p1340 p1346). increase the up ramp (p1120) or reduce the load. check the motor and motor cables for short-circuit and ground fault.
Remedy:	 check the current limits (p0640). U/f control: Check the current limiting controller (p1340 p1346). increase the up ramp (p1120) or reduce the load. check the motor and motor cables for short-circuit and ground fault. check the motor for the star-delta configuration and rating plate parameterization.
Remedy:	 check the current limits (p0640). U/f control: Check the current limiting controller (p1340 p1346). increase the up ramp (p1120) or reduce the load. check the motor and motor cables for short-circuit and ground fault.

F07802	Drive: Infeed or power unit not ready
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	After an internal power-on command, the infeed or drive does not signal ready. - monitoring time is too short. - DC link voltage is not present. - associated infeed or drive of the signaling component is defective.
Remedy:	 supply voltage incorrectly set. ensure that there is a DC link voltage. Check the DC link busbar. Enable the infeed. replace the associated infeed or drive of the signaling component. check the line supply voltage setting (p0210).
A07805 (N)	Drive: Power unit overload I2t
Reaction:	NONE
Acknowledge:	NONE
Cause:	Alarm threshold for I2t overload of the power unit exceeded. The response parameterized in p0290 becomes active. See also: p0290 (Power unit overload response)
Remedy:	 reduce the continuous load. adapt the load duty cycle. check the assignment of the motor and power unit rated currents.
F07806	Drive: Regenerative power limit exceeded (F3E)
Reaction:	OFF2 (IASC/DCBRAKE)
Acknowledge:	IMMEDIATELY
Cause:	For blocksize power units, types PM250 and PM260, the regenerative rated power r0206[2] was exceeded for more than 10 s. See also: r0206 (Rated power unit power), p1531 (Power limit regenerative)
Remedy:	 - increase the down ramp. - reduce the driving load. - use a power unit with a higher regenerative feedback capability. - for vector control, the regenerative power limit in p1531 can be reduced so that the fault is no longer triggered.
F07807	Drive: Short-circuit/ground fault detected
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	A phase-phase short-circuit or ground fault was detected at the motor-side output terminals of the converter. Fault value (r0949, interpret decimal): 1: Short-circuit, phases U-V 2: Short-circuit, phases U-W 3: Short-circuit, phases V-W 4: Ground fault with overcurrent 1xxxx: Ground fault with overcurrent 1xxxx: Ground fault with current in phase U detected (xxxx = component of the current in phase V in per mille) 2xxxx: Ground fault with current in phase V detected (xxxx = component of the current in phase U in per mille)
Remedy:	Note: Also when interchanging the line and motor cables is identified as a motor-side short circuit. Connecting to a motor that is either not de-energized or partially de-energized is possibly detected as ground fault - check the motor-side converter connection for a phase-phase short-circuit. - rule-out interchanged line and motor cables. - check for a ground fault. For a ground fault: - do not enable the pulses when connecting to a rotating motor without the "Flying restart" function activated (p1200 - increase the de-energization time (p0347).

F07808 (A)	HF damping module: damping not ready
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	When switching on or in the switched-on state, the HF damping module does not return a ready signal.
Remedy:	- Check the DRIVE-CLiQ wiring to the HF damping module.
	- check the 24 V supply voltage.
	 if required, replace the HF damping module. Note:
	HF Damping Module
F07810	Drive: Power unit EEPROM without rated data
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	No rated data are stored in the power unit EEPROM.
	See also: p0205 (Power unit application), r0206 (Rated power unit power), r0207 (Rated power unit current), r0208
Remedy:	(Rated power unit line supply voltage), r0209 (Power unit, maximum current) Replace the power unit or inform Siemens Customer Service.
A07850 (F)	External alarm 1
Reaction:	NONE
Acknowledge:	NONE
Cause:	The BICO signal for "external alarm 1" was triggered. The condition for this external alarm is fulfilled.
	See also: p2112 (External alarm 1)
Remedy:	Eliminate the causes of this alarm.
F07860 (A)	External fault 1
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The BICO signal "external fault 1" was triggered.
	See also: p2106 (External fault 1)
Remedy:	Eliminate the causes of this fault.
F07900 (N, A)	Drive: Motor blocked
Reaction:	OFF2 (NONE, OFF1, OFF3, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	Motor has been operating at the torque limit at a low speed for a longer period of time and below the set speed
	threshold. This signal can also be triggered if the speed is oscillating and the speed controller output repeatedly goes to its limit
	It may also be the case that thermal monitoring of the power unit reduces the current limit (see p0290), thereby causing the motor to decelerate.
Remedy:	- check that the motor can freely move.
	- check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539.
F07901	Drive: Motor overspeed
Reaction:	OFF2 (IASC/DCBRAKE)
Acknowledge:	IMMEDIATELY
Cause:	The maximum permissible speed was either positively or negatively exceeded.
	The maximum permissible positive speed is formed as follows: Minimum (p1082) The maximum permissible negative speed is formed as follows: Maximum (-p1082)
Remedy:	The following applies for a positive direction of rotation:
	- check r1084 and if required, correct p1082.
	The following applies for a negative direction of rotation: - check r1087 and if required, correct p1082.
	Activate pre-control of the speed limiting controller (bit $7 = 1$).
	Increase the hysteresis for the overspeed signal. This upper limit is dependent upon the maximum motor speed
	p0322 and the maximum speed p1082 of the setpoint channel.

F07902 (N, A)	Drive: Motor stalled
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The system has identified that the motor has stalled for a time longer than is set. Fault value (r0949, interpret decimal): 1: Reserved. 2: Stall detection using r1408.12 (p1745).
Remedy:	Steps should always be taken to ensure that both motor data identification and the rotating measurement were carried out (see p1900, r3925).
	- check whether the drive stalls solely due to the load in controlled mode or when the speed setpoint is still zero. If yes, then increase the current setpoint using p1610.
	- if the motor excitation time (p0346) was significantly reduced and the drive stalls when it is switched on and run
	immediately, p0346 should be increased again.
	 check the current limits (p0640, r0067, r0289). If the current limits are too low, then the drive cannot be magnetized check whether the motor cables are disconnected (see A07929). If there is no fault, then the fault tolerance can be increased (p1745).
A07910 (N)	Drive: Motor overtemperature
Reaction:	NONE
Acknowledge:	NONE
Cause:	KTY or no sensor:
	The measured motor temperature or the temperature of the motor temperature model 2 has exceeded the alarm threshold (p0604). The response parameterized in p0610 becomes active. PTC or bimetallic NC contact:
	The response threshold of 1650 Ohm was exceeded or the NC contact opened.
	Alarm value (r2124, interpret decimal): 11: No output current reduction.
	12: Output current reduction active.
	See also: p0604 (Mot_temp_mod 1/KTY alarm threshold), p0610 (Motor overtemperature response)
Remedy:	 check the motor load. check the motor ambient temperature.
	 check KTY84. check overtemperatures of the motor temperature model 2.
	See also: p0625 (Motor ambient temperature)
A07927	DC braking active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The motor is braked with DC current. DC braking is active. 1)
	A message with response DCBRK is active. The motor is braked with the braking current set in p1232 for the duration set in in p1233. If the standstill threshold is fallen below, then braking is prematurely canceled. 2)
	DC braking has been activated at binector input p1230 with the DC braking set (p1230 = 4). Braking current p1232 is injected until this binector input becomes inactive.
Remedy:	Not necessary. The alarm automatically disappears once DC braking has been executed.
A07929 (F)	Drive: No motor detected
Reaction:	NONE
Acknowledge:	NONE
Cause:	The absolute current value is so small after enabling the inverter pulses that no motor is detected. Note: In the case of vector control and an induction motor, this alarm is followed by the fault F07902.
Remedy:	 check the motor feeder cables. check the voltage boost of the U/f control (p1310).
	- carry out a standstill measurement to set the stator resistance (p0350).

F07935 (N)	Drive: Incorrect motor holding brake configuration
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	An incorrect motor holding brake configuration was detected. Fault value (r0949, interpret decimal): 0:
	A motor holding brake was detected where the brake control has not been configured (p1215 = 0). The brake control configuration was set to "motor holding brake the same as sequence control" (p1215 = 1) (only when commissioning for the first time). For a chassis unit with Safe Brake Adapter (SBA), the interconnection p9621 = r9872.3 was established (only wher
	commissioning for the first time).
	For a parallel connection, the power unit was set in p7015, to which the motor holding brake is connected (only wher commissioning for the first time). 1:
	A motor holding brake was detected where the brake control has not been configured (p1215 = 0). The brake control configuration was left at "No motor holding brake available" (p1215 = 0). 11:
	The identification had detected more than one motor holding brake for a parallel connection. 12:
	For the parallel connection, in p0121 there is no valid component number for the power unit data set that is set in p7015. 13:
	With the "Safe brake control" (SBC) function activated, an attempt was made to change the value in p7015. 14:
	For a parallel connection, the power units set in p7015 cannot be addressed.
Remedy:	For fault value = 0: - No remedy required.
	For fault value = 1:
	 If required change the motor holding brake configuration (p1215 = 1, 2). If this fault value unexpectedly occurs, then the motor connections should be checked in order to rule out that they have been interchanged.
	For fault value = 11: For a parallel connection, only connect one motor holding brake. For fault value = 12:
	Check the setting of the power unit data set for a parallel connection (p7015). For fault value = 13:
	Before changing p7015, deactivate the "Safe brake control" function (SBC) (p9602). For fault value = 14:
	Check whether the power unit supports the brake control for a parallel connection (r9771.14). Check whether there is a DRIVE-CLiQ communication error between the Control Unit and the power unit involved and, if required, carry out a diagnostics routine for the faults identified. See also: p1215 (Motor holding brake configuration)
F07950 (A)	Motor parameter incorrect
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The motor parameters were incorrectly entered while commissioning (e.g. p0300 = 0, no motor) Fault value (r0949, interpret decimal): Parameter number involved.
	See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0316, p0320, p0322, p0323
Remedy:	Compare the motor data with the rating plate data and if required, correct. See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0316, p0320, p0322, p0323
F07967	Drive: Pole position identification internal fault
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the pole position identification routine.
	Only for internal Siemens troubleshooting.

F07968	Drive: Lq-Ld measurement incorrect
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	 A fault has occurred during the Lq-Ld measurement. Fault value (r0949, interpret decimal): 10: Stage 1: The ratio between the measured current and zero current is too low. 12: Stage 1: The maximum current was exceeded. 15: Second harmonic too low. 16: Drive converter too small for the measuring technique. 17: Abort due to pulse inhibit.
Remedy:	For fault value = 10: Check whether the motor is correctly connected. Replace the power unit involved. De-activate technique (p1909). For fault value = 12: Check whether motor data have been correctly entered. De-activate technique (p1909). For fault value = 16: De-activate technique (p1909). For fault value = 17: Repeat technique.
F07969	Drive: Incorrect pole position identification
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	 A fault has occurred during the pole position identification routine. Fault value (r0949, interpret decimal): Current controller limited Motor shaft locked. 10: Stage 1: The ratio between the measured current and zero current is too low. 11: Stage 2: The ratio between the measured current and zero current is too low. 12: Stage 1: The maximum current was exceeded. 13: Stage 2: The maximum current was exceeded. 14: Current difference to determine the +d axis too low. 15: Second harmonic too low. 16: Drive converter too small for the measuring technique. 17: Abort due to pulse inhibit. 18: First harmonic too low. 20: Pole position identification requested with the motor shaft rotating and activated "flying restart" function.
Remedy:	For fault value = 1: Check whether the motor is correctly connected. Check whether motor data have been correctly entered. Replace the power unit involved. For fault value = 2: Bring the motor into a no-load condition. For fault value = 10: Check whether the motor is correctly connected. Replace the power unit involved. For fault value = 11: Check whether the motor is correctly connected. Replace the power unit involved. For fault value = 12: Check whether motor data have been correctly entered. For fault value = 13: Check whether motor data have been correctly entered. For fault value = 17: Repeat technique. For fault value = 20: Before carrying out a pole position identification routine ensure that the motor shaft is absolutely stationary (zero speed).

ccessfully completed or for
th is active.
high.
J
the speed controller p0340
ŀ

	Re fault value = 1 4: - check the motor parameters (rating plate data). After the change: Calculate p0340 = 3. - check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3. - carry out a motor data identification routine (p1910). - if required, reduce the dynamic factor (p1967 < 25 %). For fault value = 5: - the speed setpoint (p1961) is too high. Reduce the speed. For fault value = 6: - adapt the speed setpoint (p1961) or minimum limiting (p1080). For fault value = 7: - adapt the speed setpoint (p1961) or suppression (skip) bandwidths (p1091 p1092, p1101). For fault value = 8: - adapt the speed setpoint (p1961) or maximum limit (p1082, p1083 and p1086). Re fault value = 9, 10: - the measurement was carried out at an operating point where the load torque is too high. Select a more suitable operating point, either by changing the speed setpoint (p1961) or by reducing the load torque. The load torque may not be varied while making measurements. Note: The saturation characteristic identification routine can be disabled using p1959.1. See also: p1959 (Rotating measurement configuration)
F07984	Drive: Speed controller optimization, moment of inertia
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	 A fault has occurred while identifying the moment of inertia. Fault value (r0949, interpret decimal): The speed did not reach a steady-state condition. The speed setpoint was not able to be approached as the minimum limiting is active. The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. The speed setpoint was not able to be approached as the maximum limiting is active. It is not possible to increase the speed by 10% as the minimum limiting is active. It is not possible to increase the speed by 10% as the suppression (skip) bandwidth is active. It is not possible to increase the speed by 10% as the suppression (skip) bandwidth is active. It is not possible to increase the speed by 10% as the maximum limiting is active. It is not possible to increase the speed by 10% as the maximum limiting is active. It is not possible to increase the speed by 10% as the maximum limiting is active. It is not possible to increase the speed by 10% as the maximum limiting is active. It is not possible to increase the speed by 10% as the maximum limiting is active. The torque difference after the speed setpoint step is too low in order to be able to still reliably identify the moment of inertia. Too few data to be able to reliably identify the moment of inertia. After the setpoint step, the speed either changed too little or in the incorrect direction. The identified moment of inertia is not plausible.
Remedy:	For fault value = 1: - check the motor parameters (rating plate data). After the change: Calculate p0340 = 3. - check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3. - carry out a motor data identification routine (p1910). - if required, reduce the dynamic factor (p1967 < 25 %). Re fault value = 2, 5: - adapt the speed setpoint (p1965) or adapt the minimum limit (p1080). Re fault value = 3, 6: - adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 p1092, p1101). Re fault value = 4, 7: - adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086). For fault value = 8: - the total drive moment of inertia is far higher than that of the motor (refer to p0341, p0342). De-select rotating measurement (p1960), enter the moment of inertia p0342, re-calculate the speed controller p0340 = 4 and repeat the measurement. For fault value = 9: - check the moment of inertia (p0341, p0342). After the change, re-calculate (p0340 = 3 or 4). For fault value = 10: - check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3. Note:

F07985	Drive: Speed controller optimization (oscillation test)
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the vibration test.
	Fault value (r0949, interpret decimal):
	1: The speed did not reach a steady-state condition.
	2: The speed setpoint was not able to be approached as the minimum limiting is active.3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
	4: The speed setpoint was not able to be approached as the maximum limiting is active.
	5: Torque limits too low for a torque step.
	6: No suitable speed controller setting was found.
Remedy:	For fault value = 1:
	 check the motor parameters (rating plate data). After the change: Calculate p0340 = 3. check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
	- carry out a motor data identification routine (p1910).
	- if required, reduce the dynamic factor ($p1967 < 25\%$).
	For fault value = 2:
	- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).
	For fault value = 3: - adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 p1092, p1101).
	For fault value = 4:
	- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).
	For fault value = 5:
	- increase the torque limits (e.g. p1520, p1521). For fault value = 6:
	- reduce the dynamic factor (p1967).
	- disable the vibration test ($p1959.4 = 0$) and repeat the rotating measurement.
	See also: p1959 (Rotating measurement configuration)
F07986	Drive: Rotating measurement ramp-function generator
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	During the rotating measurements, problems with the ramp-function generator occurred.
	Fault value (r0949, interpret decimal):
	1: The positive and negative directions are inhibited.
Remedy:	For fault value = 1:
	Enable the direction (p1110 or p1111).

	10: Motor has been incorrectly connected.
	11: Motor shaft rotates. 12: Ground fault detected.
	 20: Identified threshold voltage of the semiconductor devices lies outside the expected range 0 10 V. 30: Current controller in voltage limiting.
	40: At least one identification contains errors. The identified parameters are not saved to prevent inconsistencies. 50: The selected sampling time is too low for the motor identification (p0115[0]).
Remedy:	Re fault value = 1 40: - check whether motor data have been correctly entered in p0300, p0304 p0311. - is there an appropriate relationship between the motor power rating and that of the power unit? The ratio of the power unit to the rated motor current should not be less than 0.5 and not be greater than 4. - check connection type (star-delta). Re fault value = 4, 7:
	 check whether the inductance in p0233 is correctly set. check whether motor has been correctly connected (star-delta).
	For fault value = 12:
	- check the power cable connections. - check the motor.
	- check the CT.
	For fault value = 50:
	 Perform a motor data identification with a higher sampling time, and after this, change to the required higher sampling time (p0115[0]).
A07991 (N)	Drive: Motor data identification activated
Reaction:	NONE
Acknowledge:	NONE
Cause:	The motor data identification routine is activated. The motor data identification routine is carried out at the next power-on command. If rotating measurement is selected (see p1900, p1960), it will not be possible to save the parameter assignment. Once motor data identification has been completed or de-activated, the option to save the parameter assignment will be made available again. See also: p1910 (Motor data identification selection)
Remedy:	Not necessary. The alarm automatically disappears after the motor data identification routine has been successfully completed or
	for the setting p1900 = 0.
A07994 (F, N)	Drive: motor data identification not performed
Reaction:	NONE
Acknowledge:	NONE
Cause:	The "vector control" mode has been selected and a motor data identification has still not been performed. The alarm is initiated when changing the drive data set (see r0051) in the following cases: - vector control is parameterized in the actual drive data set (p1300 >= 20). and
	- motor data identification has still not been performed in the actual drive data set (see r3925). Note:
	For SINAMICS G120, a check is made and an alarm is output also when exiting commissioning and when the system powers up.
Remedy:	 Perform motor data identification (see p1900). If required, parameterize "U/f control" (p1300 < 20). switch over to a drive data set, in which the conditions do not apply.
F08010 (N, A)	CU: Analog-to-digital converter
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The analog-to-digital converter on the Control Unit has not supplied any converted data.
Remedy:	- check the power supply. - replace Control Unit.

F08501 (N, A)	PROFINET: Setpoint timeout
Reaction:	OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The reception of setpoints from PROFINET has been interrupted. - bus connection interrupted. - controller switched off. - controller set into the STOP state.
Remedy:	 Restore the bus connection and set the controller to RUN. check the set monitoring time if the error persists.
F08502 (A)	PROFINET: Monitoring time sign-of-life expired
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The monitoring time for the sign-of-life counter has expired. The connection to the PROFINET interface was interrupted.
Remedy:	- carry out a POWER ON (power off/on). - contact the Hotline.
A08511 (F)	PROFINET: Receive configuration data invalid
Reaction:	NONE
Acknowledge:	NONE
Cause:	The drive unit did not accept the receive configuration data. Alarm value (r2124, interpret decimal): Return value of the receive configuration data check. 2: Too many PZD data words for output or input to a drive object. Maximum of 12 words are possible. 3: Uneven number of bytes for input or output. 501: PROFIsafe parameter error (e.g. F_dest).
Remedy:	Check the receive configuration data. Re alarm value = 2: - Check the number of data words for output and input to a drive object. Re alarm value = 501: - Check the set PROFIsafe address (p9610).
A08526 (F)	PROFINET: No cyclic connection
Reaction:	NONE
Acknowledge:	NONE
Cause:	There is no connection to a PROFINET controller.
Remedy:	Establish the cyclic connection and activate the controller with cyclic operation. Check the parameters "Name of Station" and "IP of Station" (r61000, r61001).
A08565	PROFINET: Consistency error affecting adjustable parameters
Reaction:	NONE
Acknowledge:	NONE
Cause:	A consistency error was detected when activating the configuration (p8925 = 1) for the PROFINET interface. The currently set configuration has not been activated. Possible causes: - IP address, subnet mask or default gateway is not correct - IP address or station name used twice in the network - station name contains invalid characters, etc. See also: p8920 (PN Name of Station), p8921 (PN IP address of station), p8922 (PN Default Gateway of Station), p8923 (PN Subnet Mask of Station)
Remedy:	Check the required interface configuration (p8920 and following), correct if necessary, and activate (p8925 = 1). See also: p8925 (PN interface configuration)

Faults and alarms

F08700 (A)	CAN: Communications error
Reaction:	OFF3 (NONE, OFF1, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A CAN communications error has occurred.
	Fault value (r0949, interpret decimal):
	1: The error counter for the send telegrams has exceeded the BUS OFF value 255. The bus disables the CAN
	controller.
	- bus cable short circuit.
	- incorrect baud rate.
	- incorrect bit timing.
	2: The master no longer interrogated the CAN node status longer than for its "life time". The "life time" is obtained from the "quard time" (p8604[0]) multiplied by the "life time factor" (p8604[1]).
	- bus cable interrupted.
	- bus cable not connected.
	- incorrect baud rate.
	- incorrect bit timing.
	- master fault.
	Note:
	The fault response can be set as required using p8641.
De me e de u	See also: p8604 (CAN node guarding), p8641 (CAN Abort Connection Option Code)
Remedy:	- check the bus cable - check the baud rate (p8622).
	- check the bit timing (p8623).
	- check the master.
	The CAN controller must be manually restarted with p8608 = 1 after the cause of the fault has been resolved!
	See also: p8608 (CAN Clear Bus Off Error), p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)
F08701	CAN: NMT state change
Reaction:	OFF3
Acknowledge:	IMMEDIATELY
Cause:	A CANopen NMT state transition from "operational" to "pre-operational" or after "stopped".
	Fault value (r0949, interpret decimal):
	1: CANopen NMT state transition from "operational" to "pre-operational".
	2: CANopen NMT state transition from "operational" to "stopped".
	Note:
	In the NMT state "pre-operational", process data cannot be transferred and in the NMT state "stopped", no process data and no service data can be transferred.
Remedy:	Not necessary.
	Acknowledge the fault and continue operation.
F08702 (A)	CAN: RPDO Timeout
Reaction:	OFF3 (NONE, OFF1, OFF2)
	IMMEDIATELY
Acknowledge:	
Cause:	The monitoring time of the CANopen RPDO telegram has expired because the bus connection was either interrupted or the CANopen Master was switched-off.
	See also: p8699 (CAN: RPDO monitoring time)
Remedy:	- check the bus cable
	- check the master.
	- If required, increase the monitoring time (p8699).
A08751	CAN: Telegram loss
A08751 Reaction:	CAN: Telegram loss
Reaction:	-
Reaction: Acknowledge:	NONE
Reaction:	NONE

A08752	CAN: Error counter for error passive exceeded
Reaction:	NONE
Acknowledge:	NONE
Cause:	The error counter for the send or receive telegrams has exceeded the value 127.
Remedy:	- check the bus cable
	- set a higher baud rate (p8622).
	- check the bit timing and if required optimize (p8623).
	See also: p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)
A08753	CAN: Message buffer overflow
Reaction:	NONE
Acknowledge:	NONE
Cause:	A message buffer overflow.
	Alarm value (r2124, interpret decimal):
	1: Non-cyclic send buffer (SDO response buffer) overflow.
	2: Non-cyclic receive buffer (SDO receive buffer) overflow.
Pomody:	 3: Cyclic send buffer (PDO send buffer) overflow. - check the bus cable.
Remedy:	- check the bus cable. - set a higher baud rate (p8622).
	- check the bit timing and if required optimize (p8623).
	Re alarm value = 2:
	 reduce the cycle times of the SDO receive messages.
	- SDO request from master only after SDO feedback for previous SDO request.
	See also: p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)
A08754	CAN: Incorrect communications mode
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the "operational" mode, an attempt was made to change parameters p8700 p8737.
Remedy:	Change to the "pre-operational" or "stopped" mode.
A08755	CAN: Obj cannot be mapped
Reaction:	NONE
Acknowledge:	NONE
Cause:	The CANopen object is not provided for the Process Data Object (PDO) Mapping.
Remedy:	Use a CANopen object intended for the PDO mapping or enter 0.
Kenieuy.	The following objects can be mapped in the Receive Process Data Object (RPDO) or Transmit Process Data Object
	(TPDO):
	- RPDO: 6040 hex, 6060 hex, 60FF hex, 6071 hex; 5800 hex - 580F hex; 5820 hex - 5827 hex
	 TPDO: 6041 hex, 6061 hex, 6063 hex, 6069 hex, 606B hex, 606C hex, 6074 hex; 5810 hex - 581F hex; 5830 hex 5837 hex
	Only sub-index 0 of the specified objects can be mapped.
	Note:
	As long as A08755 is present, the COB-ID cannot be set to valid.
A08757	CAN: Set COB-ID invalid
Reaction:	NONE
Acknowledge:	NONE
Cause:	For online operation, the appropriate COB-ID must be set invalid before mapping.
	Example:
	Mapping for RPDO 1 should be changed (p8710[0]).
	> set p8700[0] = C00006E0 hex (invalid COB-ID)
	> set p8710[0] as required.
Remedy:	> p8700[0] enter a valid COB-ID Set the COB-ID to invalid.

A08759	CAN: PDO COB-ID already available
Reaction:	NONE
Acknowledge:	NONE
Cause:	An existing PDO COB-ID was allocated.
Remedy:	Select another PDO COB-ID.
A08800	PROFlenergy energy-saving mode active
Reaction:	NONE
Acknowledge:	NONE
Cause:	The PROFlenergy energy-saving mode is active
	Alarm value (r2124, interpret decimal): Mode ID of the active PROFlenergy energy-saving mode.
	See also: r5600 (Pe energy saving mode ID)
Remedy:	The alarm automatically disappears when the energy-saving mode is exited.
	Note:
	After receiving the PROFlenergy command "End_Pause" via PROFINET, the energy-saving mode is exited.
A08802	PROFlenergy not possible to switch off incremental encoder supply
Reaction:	NONE
Acknowledge:	NONE
Cause:	The incremental encoder is used for the closed-loop position control. This means that its power supply cannot be
	switched off during the PROFlenergy energy-saving mode, otherwise it would lose its position actual value. Alarm value (r2124, interpret decimal):
	Encoder number
Remedy:	The alarm automatically disappears when the energy-saving mode is exited.
	Note:
	After receiving the PROFlenergy command "End_Pause" via PROFINET, the energy-saving mode is exited.
F13009	Licensing OA application not licensed
Reaction:	OFF1
Acknowledge:	IMMEDIATELY
Cause:	At least one OA application which is under license does not have a license.
	Note: Defer to 14055 and p4055 for information about the installed QA applications
Pomodu:	Refer to r4955 and p4955 for information about the installed OA applications.
Remedy:	 enter and activate the license key for OA applications under license (p9920, p9921). if necessary, de-activate unlicensed OA applications (p4956).
F13100

	Note: In general, the copy protection can only be changed when know-how protection is deactivated.
	KHP: Know-How Protection See also: p3981 (Faults, acknowledge drive object), p7765 (KHP memory card copy protection)
F13101	Know-how protection: Copy protection cannot be activated
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	An error occurred when attempting to activate the copy protection for the memory card. Fault value (r0949, interpret decimal): 0: A memory card is not inserted.
	1: An invalid memory card is inserted (not SIEMENS). Note: KHP: Know-How Protection
Remedy:	- Insert a valid memory card.
	- Try to activate copy protection again (p7765). See also: p7765 (KHP memory card copy protection)
F13102	Know-how protection: Consistency error of the protected data
Reaction:	OFF1
Acknowledge:	IMMEDIATELY
Cause:	An error was identified when checking the consistency of the protected files. As a consequence, the project on the memory card cannot be run. Fault value (r0949, interpret hexadecimal):
	yyyyxxxx hex: yyyy = object number, xxxx = fault cause xxxx = 1:
	A file has a checksum error.
	xxxx = 2: The files are not consistent with one another. Note:
	KHP: Know-How Protection
Remedy:	 Replace the project on the memory card. Restore the factory setting and download again.
F30001	Power unit: Overcurrent
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit has detected an overcurrent condition. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame).
	- U/f operation: Up ramp set too low.
	- U/f operation: rated current of motor much greater than that of power unit.
	 High discharge and post-charging current for line supply voltage interruptions. High post-charging currents for overload when motoring and DC link voltage dip.
	- Short-circuit currents at power-on due to the missing line reactor.
	- power cables are not correctly connected.
	 power cables exceed the maximum permissible length. power unit defective.
	- line phase interrupted.
	Fault value (r0949, interpret bitwise binary): Bit 0: Phase U.
	Bit 1: Phase V.
	Bit 2: Phase W.
	Bit 3: Overcurrent in the DC link. Note:
	Fault value = 0 means that the phase with overcurrent is not recognized.
Remedy:	
	 check the motor data - if required, carry out commissioning. check the motor circuit configuration (star/delta).
	 check the motor data - if required, carry out commissioning. check the motor circuit configuration (star/delta). U/f operation: Increase up ramp. U/f operation: Check assignment of rated currents of motor and power unit.

	Poduco motor load
	- Reduce motor load. - Correct connection of line reactor.
	- check the power cable connections.
	 check the power cables for short-circuit or ground fault.
	- check the length of the power cables.
	- replace power unit. - check the line supply phases.
F30002 Reaction:	Power unit: DC link voltage, overvoltage OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit has detected an overvoltage condition in the DC link. - motor regenerates too much energy.
	- line supply voltage too high.
	- line phase interrupted.
	- DC-link voltage control switched off.
	- dynamic response of DC-link voltage controller excessive or insufficient.
	Fault value (r0949, interpret decimal):
Pomody:	DC link voltage at the time of trip [0.1 V].
Remedy:	-increase the ramp-down time (p1121). - set the rounding times (p1130, p1136). This is particularly recommended in U/f operation to relieve the DC link
	voltage controller with rapid ramp-down times of the ramp-function generator.
	- Activate the DC link voltage controller (p1240, p1280).
	- adapt the dynamic response of the DC-link voltage controller (p1243, p1247, p1283, p1287).
	- check the line supply voltage and setting in p0210.
	 check and correct the phase assignment at the power unit. check the line supply phases.
	See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller configuration (vector control))
F30003	Power unit: DC link voltage, undervoltage
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit has detected an undervoltage condition in the DC link.
	- line supply failure
	- line supply voltage below the permissible value.
	- line phase interrupted. Note:
	The monitoring threshold for the DC link undervoltage is the minimum of the following values:
	- for a calculation, refer to p0210.
Remedy:	- check the line supply voltage
-	- check the line supply phases.
	See also: p0210 (Drive unit line supply voltage)
F30004	Power unit: Overtemperature heat sink AC inverter
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The temperature of the power unit heat sink has exceeded the permissible limit value.
	- insufficient cooling, fan failure.
	- overload.
	- ambient temperature too high.
	- pulse frequency too high. Fault value (r0949):
Remedy:	Temperature [1 bit = 0.01 °C]. - check whether the fan is running.
Remedy:	Temperature [1 bit = 0.01 °C].
Remedy:	Temperature [1 bit = 0.01 °C]. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range.
Remedy:	Temperature [1 bit = 0.01 °C]. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range. - check the motor load.
Remedy:	 Temperature [1 bit = 0.01 °C]. check whether the fan is running. check the fan elements. check whether the ambient temperature is in the permissible range. check the motor load. reduce the pulse frequency if this is higher than the rated pulse frequency.
Remedy:	Temperature [1 bit = 0.01 °C]. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range. - check the motor load.

F30005	Power unit: Overload I2t
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit was overloaded (r0036 = 100 %). - the permissible rated power unit current was exceeded for an inadmissibly long time. - the permissible load duty cycle was not maintained. Fault value (r0949, interpret decimal): I2t [100 % = 16384].
Remedy:	 reduce the continuous load. adapt the load duty cycle. check the motor and power unit rated currents. reduce the current limit (p0640). during operation with U/f characteristic: reduce the integral time of the current limiting controller (p1341). See also: r0036 (Power unit overload I2t), r0206 (Rated power unit power), p0307 (Rated motor power)
F30011	Power unit: Line phase failure in main circuit
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	At the power unit, the DC link voltage ripple has exceeded the permissible limit value. Possible causes: - A line phase has failed. - The 3 line phases are inadmissibly unsymmetrical. - the fuse of a phase of a main circuit has ruptured. - A motor phase has failed. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	 check the main circuit fuses. Check whether a single-phase load is distorting the line voltages. check the motor feeder cables.
F30012	Power unit: Temperature sensor heat sink wire breakage
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause: Remedy:	The connection to a heat sink temperature sensor in the power unit is interrupted. Fault value (r0949, interpret hexadecimal): Bit 0: Module slot (electronics slot) Bit 1: Air intake Bit 2: Inverter 1 Bit 3: Inverter 2 Bit 4: Inverter 3 Bit 5: Inverter 4 Bit 6: Inverter 5 Bit 7: Inverter 6 Bit 8: Rectifier 1 Bit 9: Rectifier 2 Contact the manufacturer.
F30013	Power unit: Temperature concer best eink short eineuit
	Power unit: Temperature sensor heat sink short-circuit
Reaction: Acknowledge:	OFF1 (OFF2) IMMEDIATELY
Cause:	The heat sink temperature sensor in the power unit is short-circuited. Fault value (r0949, interpret hexadecimal): Bit 0: Module slot (electronics slot) Bit 1: Air intake Bit 2: Inverter 1 Bit 3: Inverter 2 Bit 4: Inverter 3 Bit 5: Inverter 4 Bit 6: Inverter 5

	Bit 7: Inverter 6
	Bit 8: Rectifier 1
Remedy:	Bit 9: Rectifier 2 Contact the manufacturer.
F30015 (N, A)	Power unit: Phase failure motor cable
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	A phase failure in the motor feeder cable was detected.
	The signal can also be output in the following cases:
	 The motor is correctly connected, but the drive has stalled in U/f control. In this case, a current of 0 A is possibly measured in one phase due to asymmetry of the currents.
	- the motor is correctly connected, however the closed-speed control is instable and therefore an oscillating torque
	is generated.
	Note:
Demodel	Chassis power units do not feature phase failure monitoring.
Remedy:	 check the motor feeder cables. increase the ramp-up or ramp-down time (p1120) if the drive has stalled in U/f control.
	- check the speed controller settings.
A30016 (N)	Power unit: Load supply switched out
Reaction:	NONE
Acknowledge:	NONE
Cause:	The DC link voltage is too low.
	Alarm value (r2124, interpret decimal):
Remedy:	DC link voltage at the time of trip [0.1 V]. Under certain circumstances, the AC line supply is not switched on.
F30017 Reaction:	Power unit: Hardware current limit has responded too often OFF2
Acknowledge:	IMMEDIATELY
Cause:	The hardware current limitation in the relevant phase (see A30031, A30032, A30033) has responded too often. The
	number of times the limit has been exceeded depends on the design and type of power unit.
	- closed-loop control is incorrectly parameterized.
	 fault in the motor or in the power cables. the power cables exceed the maximum permissible length.
	- motor load too high
	- power unit defective.
	Fault value (r0949, interpret binary):
	Bit 0: Phase U Bit 1: Phase V
	Bit 2: Phase W
Remedy:	- check the motor data.
	- check the motor circuit configuration (star-delta).
	- check the motor load.
	 check the power cable connections. check the power cables for short-circuit or ground fault.
	- check the length of the power cables.
	- replace power unit.
F30021	Power unit: Ground fault
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Power unit has detected a ground fault.
	- ground fault in the power cables.
	- winding fault or ground fault at the motor. - CT defective.
	- when the brake is applied, this causes the hardware DC current monitoring to respond.
	Fault value (r0949, interpret decimal):
	Absolute value, summation current [32767 = 271 % rated current].

Remedy:	- check the power cable connections.
	- check the motor. - check the CT.
	- check the cables and contacts of the brake connection (a wire is possibly broken).
	See also: p0287 (Ground fault monitoring thresholds)
F30022	Power unit: Monitoring U_ce
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	In the power unit, the monitoring of the collector-emitter voltage (U_ce) of the semiconductor has responded. Possible causes:
	- fiber-optic cable interrupted.
	- power supply of the IGBT gating module missing. - short-circuit at the power unit output.
	- defective semiconductor in the power unit.
	Fault value (r0949, interpret binary):
	Bit 0: Short-circuit in phase U
	Bit 1: Short circuit in phase V Bit 2: Short circuit in phase W
	Bit 2: Short-circuit in phase W Bit 3: Light transmitter enable defective
	Bit 4: U_ce group fault signal interrupted
	See also: r0949 (Fault value)
Remedy:	- check the fiber-optic cable and if required, replace.
	- check the power supply of the IGBT gating module (24 V).
	 check the power cable connections. select the defective semiconductor and replace.
	- select the delective semiconductor and replace.
F30024	Power unit: Overtemperature thermal model
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The temperature difference between the heat sink and chip has exceeded the permissible limit value. - the permissible load duty cycle was not maintained. - insufficient cooling, fan failure. - overload.
	- ambient temperature too high. - pulse frequency too high. See also: r0037 (Power unit temperatures)
Remedy:	- adapt the load duty cycle. - check whether the fan is running.
	- check the fan elements.
	 check whether the ambient temperature is in the permissible range.
	 check the motor load. reduce the pulse frequency if this is higher than the rated pulse frequency.
	- if DC braking is active: reduce braking current (p1232).
F30025	Bower unit: Chin overtemperature
Reaction:	Power unit: Chip overtemperature
Acknowledge:	OFF2 IMMEDIATELY
Cause:	
Cause.	
	The chip temperature of the semiconductor has exceeded the permissible limit value. - the permissible load duty cycle was not maintained. - insufficient cooling, fan failure. - overload.
	- the permissible load duty cycle was not maintained. - insufficient cooling, fan failure. - overload. - ambient temperature too high.
	 the permissible load duty cycle was not maintained. insufficient cooling, fan failure. overload. ambient temperature too high. pulse frequency too high. Fault value (r0949, interpret decimal):
Remedy:	 the permissible load duty cycle was not maintained. insufficient cooling, fan failure. overload. ambient temperature too high. pulse frequency too high. Fault value (r0949, interpret decimal): Temperature difference between the heat sink and chip [0.01 °C].
Remedy:	 the permissible load duty cycle was not maintained. insufficient cooling, fan failure. overload. ambient temperature too high. pulse frequency too high. Fault value (r0949, interpret decimal):
Remedy:	 the permissible load duty cycle was not maintained. insufficient cooling, fan failure. overload. ambient temperature too high. pulse frequency too high. Fault value (r0949, interpret decimal): Temperature difference between the heat sink and chip [0.01 °C]. adapt the load duty cycle.

	- check the motor load.
	- reduce the pulse frequency if this is higher than the rated pulse frequency.
	Notice: This fault can only be acknowledged after this alarm threshold for alarm A05001 has been undershot.
	See also: r0037 (Power unit temperatures)
F30027	Power unit: Precharging DC link time monitoring
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit DC link was not able to be pre-charged within the expected time.1) There is no line supply voltage connected.2) The line contactor/line side switch has not been closed.
	3) The line supply voltage is too low.4) Line supply voltage incorrectly set (p0210).
	5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit.
	6) The pre-charging resistors are overheated as the DC link capacitance is too high.
	7) The DC link has either a ground fault or a short-circuit.
	8) Pre-charging circuit may be defective. Fault value (r0949, interpret binary):
	yyyyxxxx hex:
	yyyy = power unit state
	0: Fault status (wait for OFF and fault acknowledgement).
	1: Restart inhibit (wait for OFF). 2: Overvoltage condition detected -> change into the fault state.
	3: Undervoltage condition detected -> change into the fault state.
	4: Wait for bridging contactor to open -> change into the fault state.
	 Wait for bridging contactor to open -> change into restart inhibit. Commissioning.
	7: Ready for pre-charging.
	8: Pre-charging started, DC link voltage less than the minimum switch-on voltage.
	9: Pre-charging, DC link voltage end of pre-charging still not detected.
	 Wait for the end of the de-bounce time of the main contactor after pre-charging has been completed. Pre-charging completed, ready for pulse enable.
	12: Reserved.
	xxxx = Missing internal enable signals, power unit (inverted bit-coded, FFFF hex -> all internal enable signals available)
	Bit 0: Power supply of the IGBT gating shut down.
	Bit 1: Ground fault detected.
	Bit 2: Peak current intervention. Bit 3: I2t exceeded.
	Bit 4. Thermal model overtemperature calculated.
	Bit 5: (heat sink, gating module, power unit) overtemperature measured.
	Bit 6: Reserved. Bit 7: Overvoltage detected.
	Bit 8: Power unit has completed pre-charging, ready for pulse enable.
	Bit 9: Reserved.
	Bit 10: Overcurrent detected.
	Bit 11: Reserved. Bit 12: Reserved.
	Bit 13: Vce fault detected, transistor de-saturated due to overcurrent/short-circuit.
	Bit 14: Undervoltage detected.
_ .	See also: p0210 (Drive unit line supply voltage)
Remedy:	In general: - check the line supply voltage at the input terminals.
	- check the line supply voltage setting (p0210).
	- wait until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from
	the line supply.
	Re 5): - carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual).
	Re 6):
	- check the capacitance of the DC link and, if necessary, reduce it in accordance with the maximum permissible DC link capacitance (see relevant Equipment Manual)

 check the capacitance of the DC link and, if necessary, reduce it in accordance with the maximum permissible DC link capacitance (see relevant Equipment Manual).

	Re 7): - check the DC link for a ground fault or short circuit. See also: p0210 (Drive unit line supply voltage)
A30031	Power unit: Hardware current limiting, phase U
Reaction:	NONE
Acknowledge:	NONE
Cause:	 Hardware current limit for phase U responded. The pulsing in this phase is inhibited for one pulse period. closed-loop control is incorrectly parameterized. fault in the motor or in the power cables. the power cables exceed the maximum permissible length. motor load too high power unit defective. Note: Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.
Remedy:	 check the motor data and if required, recalculate the control parameters (p0340 = 3). As an alternative, run a motor data identification (p1910 = 1, p1960 = 1). check the motor circuit configuration (star/delta). check the motor load. check the power cable connections. check the power cables for short-circuit or ground fault. check the length of the power cables.
A30032	Power unit: Hardware current limiting, phase V
Reaction:	NONE
Acknowledge:	NONE
Cause:	 Hardware current limit for phase V responded. The pulsing in this phase is inhibited for one pulse period. closed-loop control is incorrectly parameterized. fault in the motor or in the power cables. the power cables exceed the maximum permissible length. motor load too high power unit defective. Note: Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.
Remedy:	Check the motor data and if required, recalculate the control parameters (p0340 = 3). As an alternative, run a motor data identification (p1910 = 1, p1960 = 1). - check the motor circuit configuration (star/delta). - check the motor load. - check the power cable connections. - check the power cables for short-circuit or ground fault. - check the length of the power cables.
A30033	Power unit: Hardware current limiting, phase W
Reaction:	NONE
Acknowledge:	NONE
Cause:	 Hardware current limit for phase W responded. The pulsing in this phase is inhibited for one pulse period. - closed-loop control is incorrectly parameterized. - fault in the motor or in the power cables. - the power cables exceed the maximum permissible length. - motor load too high - power unit defective. Note: Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.
Remedy:	 check the motor data and if required, recalculate the control parameters (p0340 = 3). As an alternative, run a motor data identification (p1910 = 1, p1960 = 1). check the motor circuit configuration (star/delta). check the motor load. check the power cable connections. check the power cables for short-circuit or ground fault. check the length of the power cables.

	Power unit: Internal overtemperature
Reaction:	NONE
Acknowledge:	NONE
Cause:	The alarm threshold for internal overtemperature has been reached.
	If the temperature inside the unit continues to increase, fault F30036 may be triggered.
	- ambient temperature might be too high. - insufficient cooling, fan failure.
	Fault value (r0949, interpret decimal):
	Only for internal Siemens troubleshooting.
Remedy:	- check the ambient temperature.
	- check the fan for the inside of the unit.
F30035	Power unit: Air intake overtemperature
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	The air intake in the power unit has exceeded the permissible temperature limit.
	For air-cooled power units, the temperature limit is at 55 °C.
	- ambient temperature too high. - insufficient cooling, fan failure.
	Fault value (r0949, interpret decimal):
	Temperature [0.01 °C].
Remedy:	- check whether the fan is running.
	- check the fan elements.
	 check whether the ambient temperature is in the permissible range. Notice:
	This fault can only be acknowledged after this alarm threshold for alarm A05002 has been undershot.
F30036	Power unit Internal evertemperature
Reaction:	Power unit: Internal overtemperature OFF2
Acknowledge:	IMMEDIATELY
Cause:	The temperature inside the drive converter has exceeded the permissible temperature limit.
00000	- insufficient cooling, fan failure.
	- overload.
	- ambient temperature too high. Fault value (r0949, interpret decimal):
	Only for internal Siemens troubleshooting.
Remedy:	
Remedy:	Only for internal Siemens troubleshooting. - check whether the fan is running. - check the fan elements.
Remedy:	Only for internal Siemens troubleshooting. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range.
Remedy:	Only for internal Siemens troubleshooting. - check whether the fan is running. - check the fan elements.
	 Only for internal Siemens troubleshooting. check whether the fan is running. check the fan elements. check whether the ambient temperature is in the permissible range. Notice: This fault can only be acknowledged once the permissible temperature limit minus 5 K has been fallen below.
F30037	Only for internal Siemens troubleshooting. - check whether the fan is running check the fan elements check whether the ambient temperature is in the permissible range. Notice: This fault can only be acknowledged once the permissible temperature limit minus 5 K has been fallen below. Power unit: Rectifier overtemperature
F30037 Reaction:	Only for internal Siemens troubleshooting. - check whether the fan is running check the fan elements check whether the ambient temperature is in the permissible range. Notice: This fault can only be acknowledged once the permissible temperature limit minus 5 K has been fallen below. Power unit: Rectifier overtemperature OFF2
F30037 Reaction: Acknowledge:	Only for internal Siemens troubleshooting. - check whether the fan is running check the fan elements check whether the ambient temperature is in the permissible range. Notice: This fault can only be acknowledged once the permissible temperature limit minus 5 K has been fallen below. Power unit: Rectifier overtemperature OFF2 IMMEDIATELY
F30037 Reaction:	Only for internal Siemens troubleshooting. - check whether the fan is running check the fan elements check whether the ambient temperature is in the permissible range. Notice: This fault can only be acknowledged once the permissible temperature limit minus 5 K has been fallen below. Power unit: Rectifier overtemperature OFF2 IMMEDIATELY The temperature in the rectifier of the power unit has exceeded the permissible temperature limit insufficient cooling, fan failure.

A30042	Power unit: Fan operating time reached or exceeded
Reaction:	NONE
Acknowledge:	NONE
Cause:	The maximum operating time of the fan in the power unit is set in p0252.
	This message indicates the following:
	Fault value (r0949, interpret decimal):
	0: The maximum fan operating time is 500 hours.
Remedy:	 The maximum fan operating time has been exceeded. Replace the fan in the power unit and reset the operating hours counter to 0 (p0251 = 0).
Kemedy.	Replace the fair in the power unit and reset the operating hours counter to 0 (pozor – 0).
A30049	Power unit: Internal fan faulty
Reaction:	NONE
Acknowledge:	NONE
Cause:	The internal fan has failed.
Remedy:	Check the internal fan and replace if necessary.
F30052	EEPROM data error
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	EEPROM data error of the power unit module.
	Fault value (r0949, interpret decimal):
	0, 2, 3, 4: The EEPROM data read in from the power unit module is inconsistent.
	1:
	EEPROM data is not compatible to the firmware of the Control Unit.
Remedy:	Replace power unit module.
A30054 (F)	Power unit: Undervoltage when opening the brake
Reaction:	NONE
Acknowledge:	NONE
Cause:	When the brake is being opened, it is detected that the power supply voltage is less than 24 V - 10% = 21.6V. Alarm value (r2124, interpret decimal): Supply voltage fault [0.1 V]. Example:
Downoday	Alarm value = 195> voltage = 19.5 V
Remedy:	Check the 24 V voltage for stability and value.
F30055	Power unit: Braking chopper overcurrent
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	An overcurrent condition has occurred in the braking chopper.
Remedy:	 check whether the braking resistor has a short circuit. for an external braking resistor, check whether the resistor may have been dimensioned too small.
	Note: The braking chopper is only enabled again at pulse enable after the fault has been acknowledged.
A30057	Power unit: Line asymmetry
Reaction:	NONE
Acknowledge:	NONE
Cause:	Frequencies have been detected on the DC link voltage that would suggest line asymmetry or failure of a line phase It is also possible that a motor phase has failed. Fault F30011 is output if the alarm is present and at the latest after 5 minutes. The precise duration depends on the power unit type and the particular frequencies. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.

Remedy:	 check the line phase connection. check the motor feeder cable connections. If there is no phase failure of the line or motor, then line asymmetry is involved. reduce the power in order to avoid fault F30011.
F30059	Power unit: Internal fan faulty
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The internal power unit fan has failed and is possibly defective.
Remedy:	Check the internal fan and replace if necessary.
F30071	No new actual values received from the Power Module
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	More than one actual value telegram from the power unit module has failed.
Remedy:	Check the interface (adjustment and locking) to the power unit module.
F30072	Setpoints can no longer be transferred to the Power Module
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	More than one setpoint telegram was not able to be transferred to the power unit module.
Remedy:	Check the interface (adjustment and locking) to the power unit module.
F30074 (A)	Communication error between the Control Unit and Power Module
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Communications between the Control Unit and Power Module via the interface no longer possible. The Control Unit may have been withdrawn or is incorrectly inserted. Fault value (r0949, interpret hexadecimal): 0 hex:
	The Control Unit was withdrawn from the Power Module during operation. 1 hex: The Control Unit was withdrawn from the Power Module during operation, although the encoderless safe motion monitoring functions are enabled. This is not supported. After re-inserting the Control Unit in operation, communications to the Power Module no longer possible. 20A hex:
	The Control Unit was inserted on a Power Module, which has another code number. 20B hex: The Control Unit was inserted on a Power Module, which although it has the same code number, has a different serial number. The Control Unit executes an automatic warm restart to accept the new calibration data.
Remedy:	For fault value = 0 and 20A hex: Insert the Control Unit on an appropriate Power Module and continue operation. If required, carry out a POWER ON of the Control Unit. For fault value = 1 hex: Carry out a POWER ON of the Control Unit.
F30080	Power unit: Current increasing too quickly
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	 The power unit has detected an excessive rate of rise in the overvoltage range. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - U/f operation: Up ramp set too low. - U/f operation: rated current of motor much greater than that of power unit. - power cables are not correctly connected. - power cables exceed the maximum permissible length. - power unit defective.

Fault value (r0949, interpret bitwise binary): Bit 0: Phase U. Bit 1: Phase V. Bit 2: Phase W. - check the motor data - if required, carry out commissioning. - check the motor circuit configuration (star-delta) - U/f operation: Increase up ramp. - U/f operation: Check assignment of rated currents of motor and power unit. - check the power cable connections. - check the length of the power cables. - replace power unit.		
F30081	Power unit: Switching operations too frequent	
Reaction:	OFF2	
Acknowledge:	IMMEDIATELY	
Cause:	The power unit has executed too many switching operations for current limitation. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - U/f operation: Up ramp set too low. - U/f operation: rated current of motor much greater than that of power unit.	
	 power cables are not correctly connected. power cables exceed the maximum permissible length. power unit defective. Fault value (r0949, interpret bitwise binary): Bit 0: Phase U. Bit 1: Phase V. Bit 2: Phase W. 	
Remedy:	 check the motor data - if required, carry out commissioning. check the motor circuit configuration (star-delta) U/f operation: Increase up ramp. U/f operation: Check assignment of rated currents of motor and power unit. check the power cable connections. check the power cables for short-circuit or ground fault. check the length of the power cables. replace power unit. 	
F30105	PU: Actual value sensing fault	
Reaction:	OFF2	
Acknowledge:	IMMEDIATELY	
Cause:	At least one incorrect actual value channel was detected on the Power Stack Adapter (PSA). The incorrect actual value channels are displayed in the following diagnostic parameters.	
Remedy:	Evaluate the diagnostic parameters. If the actual value channel is incorrect, check the components and if required, replace.	
A30502	Power unit: DC link overvoltage	
Reaction:	NONE	
Acknowledge:	NONE	
Cause:	The power unit has detected overvoltage in the DC link on a pulse inhibit. - device connection voltage too high. - line reactor incorrectly dimensioned. Alarm value (r0949, interpret decimal): DC link voltage [1 bit = 100 mV]. See also: r0070 (Actual DC link voltage)	
Remedy:	 - check the device supply voltage (p0210). - check the dimensioning of the line reactor. See also: p0210 (Drive unit line supply voltage) 	

F30600 SI P2: STOP A initiated			
Reaction: OFF2			
Acknowledge:	IMMEDIATELY (POWER ON)		
Cause:	 The drive-integrated "Safety Integrated" function on processor 2 has detected an error and initiated a STOP A. forced checking procedure of the safety shutdown path via processor 2 unsuccessful. subsequent response to fault F30611 (defect in a monitoring channel). Fault value (r0949, interpret decimal): 0: Stop request from processor 1. 1005: Pulses suppressed although STO not selected and there is no internal STOP A present. 1010: Pulses enabled although STO is selected or an internal STOP A is present. 9999: Subsequent response to fault F30611. 		
Remedy:	Select Safe Torque Off and de-select again.		
	For fault value = 9999: - carry out diagnostics for fault F30611. Note: STO: Safe Torque Off		
F30611	SI P2: Defect in a monitoring channel		
Reaction:	NONE (OFF1, OFF2, OFF3)		
Acknowledge:	IMMEDIATELY (POWER ON)		
Cause:	The drive-integrated "Safety Integrated" function on processor 2 has detected a fault in the crosswise data comparison between the two monitoring channels and has initiated a STOP F. As a consequence of this fault, fault F30600 (SI P2: STOP A initiated) is output. Fault value (r0949, interpret decimal): 0: Stop request from processor 1. 1 999:		
	 Number of the cross-compared data that resulted in this fault. This number is also displayed in r9795. 2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits 3: SI F-DI changeover tolerance time (p9650, p9850). 8: SI PROFIsafe address (p9610, p9810). 9: SI debounce time for STO (p9651, p9851). 1000: Watchdog timer has expired. Within the time of approx. 5 x p9650, alternatively, the following was defined: Too many switching operations have occurred at the F-DI. Via PROFIsafe, STO was too frequently initiated (also as subsequent response). 1001, 1002: Initialization error, change timer / check timer. 2000: Status of the STO selection for both monitoring channels are different. 2001: Feedback of the safe pulse suppression on the two monitoring channels are different. 6000 6999: Error in the PROFIsafe control. For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions. The significance of the individual message values is described in safety message C01711. 		
Remedy:	nedy: Re fault values 1 999 described in "Cause": - check the cross data comparison that resulted in a STOP F. - carry out a POWER ON (power off/on). For fault value = 1000: - check the wiring of the F-DI (contact problems). - PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller. Re fault value = 1001, 1002: - carry out a POWER ON (power off/on). Re fault value = 2000, 2001, 2002, 2004, 2005: - check the tolerance time F-DI changeover and if required, increase the value (p9650/p9850). - check the causes of the STO selection in r9772. When the SI Motion functions are active (p9501 = 1), also be selected using these functions. Re fault value = 6000 6999: Refer to the description of the message values in safety message C01711. Re fault values that are described in "Cause": - carry out a POWER ON (power off/on). Re fault value = 6000 6999: Refer to the description of the message values in safety message C01711. Re fault values that are described in "Cause": - carry out a POWER ON (power off/on). - contact the Hotline - replace Control Unit.		

	Note: F-DI: Failsafe Digital Input STO: Safe Torque Off		
N30620 (F, A) SI P2: Safe Torque Off active			
Reaction:	NONE		
Acknowledge:			
Cause: The "Safe Torque Off" (STO) function has been selected on processor 2 using the input termina			
	Note:		
	This message does not result in a safety stop response.		
Remedy:	Not necessary. Note:		
	STO: Safe Torque Off		
F30625	SI P2: Sign-of-life error in safety data		
Reaction:	OFF2		
Acknowledge:	IMMEDIATELY (POWER ON)		
Cause:	The drive-integrated "Safety Integrated" function on processor 2 has detected an error in the sign-of-life of the safety data and initiated a STOP A.		
	- there is a communication error between processor 1 and processor 2 or communication has failed.		
	- a time slice overflow of the safety software has occurred.		
	Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.		
Remedy:	- select Safe Torque Off and de-select again.		
	- carry out a POWER ON (power off/on).		
	 check whether additional faults are present and if required, perform diagnostics. check the electrical cabinet design and cable routing for EMC compliance 		
F30649	SI P2: Internal software error		
Reaction:	OFF2		
Acknowledge:	IMMEDIATELY (POWER ON)		
Cause:	An internal error in the Safety Integrated software on processor 2 has occurred. Note:		
	This fault results in a STOP A that cannot be acknowledged.		
	Fault value (r0949, interpret hexadecimal):		
Pomodu:	Only for internal Siemens troubleshooting. - carry out a POWER ON (power off/on).		
Remedy:	- re-commission the "Safety Integrated" function and carry out a POWER ON.		
	- contact the Hotline.		
	- replace Control Unit.		
F30650	SI P2: Acceptance test required		
Reaction:	OFF2		
Acknowledge: IMMEDIATELY (POWER ON)			
Cause:	The drive-integrated "Safety Integrated" function on processor 2 requires an acceptance test.		
	Note: This fault results in a STOP A that can be acknowledged.		
	Fault value (r0949, interpret decimal):		
	130: Safety parameters for processor 2 not available.		
	Note: This fault value is always output when Safety Integrated is commissioned for the first time.		
	1000: Reference and actual checksum on processor 2 are not identical (booting).		
	- at least one checksum-checked piece of data is defective.		
	- Safety parameters set offline and loaded into the Control Unit.		
	2000: Reference and actual checksum on processor 2 are not identical (commissioning mode). - reference checksum incorrectly entered on processor 2 (p9899 not equal to r9898).		
	2003: Acceptance test is required as a safety parameter has been changed.		
	9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance		
	test.		

Faults and alarms

Remedy:	For fault value = 130:			
	- carry out safety commissioning routine.			
	For fault value = 1000: - again carry out safety commissioning routine.			
	- replace the memory card or Control Unit.			
	- Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate			
	settings).			
	For fault value = 2000:			
	 check the safety parameters on processor 2 and adapt the reference checksum (p9899). For fault value = 2003: 			
	- Carry out an acceptance test and generate an acceptance report.			
	For fault value = 9999:			
	- carry out diagnostics for the other safety-related fault that is present.			
	See also: p9799 (SI setpoint checksum SI parameters (processor 1)), p9899 (SI setpoint checksum SI parameters			
	(processor 2))			
F30651	SI P2: Synchronization with Control Unit unsuccessful			
Reaction:	OFF2			
Acknowledge:	IMMEDIATELY (POWER ON)			
Cause:	The drive-integrated "Safety Integrated" function requires synchronization of the safety time slices on processor 1			
	and processor 2. This synchronization was unsuccessful.			
	Note:			
	This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret decimal):			
	Only for internal Siemens troubleshooting.			
Remedy:				
F30655	SI P2: Align monitoring functions			
Reaction:	OFF2			
Acknowledge:	IMMEDIATELY (POWER ON)			
Cause:	An error has occurred when aligning the Safety Integrated monitoring functions on processor 1 and processor 2. No common set of supported SI monitoring functions was able to be determined.			
	- there is a communication error between processor 1 and processor 2 or communication has failed.			
	Note: This fault regults in a STOP A that cannot be advagued and			
	This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret hexadecimal):			
	Only for internal Siemens troubleshooting.			
Remedy:	- carry out a POWER ON (power off/on).			
2	- check the electrical cabinet design and cable routing for EMC compliance			
F30656	SI P2: Parameter processor 2 parameter error			
	0550			
Reaction:	OFF2 IMMEDIATELY (POWER ON)			
Acknowledge:				
Cause:	When accessing the Safety Integrated parameters for the processor 2 in the non-volatile memory, an error has occurred. Note:			
	This fault results in a STOP A that can be acknowledged.			
	Fault value (r0949, interpret decimal):			
	129: Safety parameters for processor 2 corrupted.			
	131: Internal software error on processor 1. 255: Internal software error on processor 2.			
Bomodu				
Remedy:	- re-commission the safety functions. - replace the memory card or Control Unit.			
F30659	SI P2: Write request for parameter rejected			
Reaction:	OFF2			
Acknowledge:	IMMEDIATELY (POWER ON)			
Cause:	The write request for one or several Safety Integrated parameters on processor 2 was rejected.			
	Note:			
	This fault does not result in a safety stop response.			

Remedy:	 Fault value (r0949, interpret decimal): 10: An attempt was made to enable the STO function although this cannot be supported. 15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported. 16: An attempt was made to enable the PROFIsafe communications although this cannot be supported. 18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported. 20: An attempt was made to simultaneously enable both the drive-integrated motion monitoring functions via integrated F-DI and STO via terminals, even though these cannot be supported at the same time. See also: r9771 (SI common functions (processor 1)), r9871 (SI common functions (processor 2)) Re fault value = 10, 15, 16, 18: check whether there are faults in the safety function alignment (F01655, F30655) and if required, carry out diagnostics for the faults involved. use a Control Unit that supports the required function. Note: STO: Safe Torque Off 			
F30662	Error in internal communications			
Reaction:	OFF2			
Acknowledge:	POWER ON			
Cause:	A module-internal communication error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.			
Remedy:	 - carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline. 			
F30664	Error while booting			
Reaction:	OFF2			
Acknowledge:	POWER ON			
Cause:	An error has occurred during booting. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.			
Remedy:	- carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline.			
F30665	SI P2: System is defective			
Reaction:	OFF2			
Acknowledge:	IMMEDIATELY			
Cause:	A system defect was detected before the last boot or in the actual one. The system might have been rebooted (reset). Fault value (r0949, interpret hexadecimal): 200000 hex, 400000 hex: - Fault in the actual booting/operation. Additional values: - defect before the last time that the system booted.			
Remedy:	 carry out a POWER ON (power off/on). upgrade firmware to later version. contact the Hotline. Re fault value = 400000 hex: ensure that the Control Unit is connected to the Power Module. 			
A30693 (F)	SI P2: Safety parameter settings changed, POWER ON required			
Reaction:	NONE			
Acknowledge:	NONE			
Cause:	Safety parameters have been changed; these will only take effect following a POWER ON. Notice: All changed parameters of the safety motion monitoring functions will only take effect following a POWER ON. Alarm value (r2124, interpret decimal): Parameter number of the safety parameter which has changed, necessitating a POWER ON.			

Remedy:	- execute the function "Copy RAM to ROM". - carry out a POWER ON (power off/on).		
N30800 (F)	Power unit: Group signal		
Reaction:	OFF2		
Acknowledge:	nowledge: NONE		
Cause: The power unit has detected at least one fault.			
Remedy:	Evaluate the other messages that are presently available.		
F30802	Power unit: Time slice overflow		
Reaction:	OFF2		
Acknowledge:	IMMEDIATELY		
Cause:	A time slice overflow has occurred.		
Remedy:	 carry out a POWER ON (power off/on) for all components. upgrade firmware to later version. contact the Hotline. 		
F30804 (N, A)	Power unit: CRC		
Reaction:	OFF2 (OFF1, OFF3)		
Acknowledge:	IMMEDIATELY		
Cause:	A CRC error has occurred for the power unit.		
Remedy:	 - carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. 		
F30805	Power unit: EPROM checksum error		
Reaction:	OFF2		
Acknowledge:	IMMEDIATELY		
Cause:	Internal parameter data is corrupted. Fault value (r0949, interpret hexadecimal): 01: EEPROM access error. 02: Too many blocks in the EEPROM.		
Remedy:	Replace the module.		
F30809	Power unit: Switching information not valid		
Reaction:	OFF2		
Acknowledge:	IMMEDIATELY		
Cause:	For 3P gating unit, the following applies: The last switching status word in the setpoint telegram is identified by the end ID. Such an end ID was not found.		
Remedy:	 carry out a POWER ON (power off/on) for all components. upgrade firmware to later version. contact the Hotline. 		
A30810 (F)	Power unit: Watchdog timer		
Reaction:	NONE		
Acknowledge:	NONE		
Cause:	When booting it was detected that the cause of the previous reset was an SAC watchdog timer overflow.		
Remedy:	 carry out a POWER ON (power off/on) for all components. upgrade firmware to later version. contact the Hotline. 		
F30850	Power unit: Internal software error		
Reaction:	OFF1 (NONE, OFF2, OFF3)		
Acknowledge:			
Cause:	An internal software error has occurred in the power unit. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.		

Remedy:	 replace power unit. if required, upgrade the firmware in the power unit. contact the Hotline. 		
F30875	Power unit DRIVE-CLiQ (CU): Supply voltage failed		
Reaction:	OFF2		
Acknowledge:	IMMEDIATELY		
Cause:	The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed. Fault cause: 9 (= 09 hex):		
	The power supply voltage for the components has failed. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause		
Remedy:	 - carry out a POWER ON (power off/on). - check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts,). - check the dimensioning of the power supply for the DRIVE-CLiQ component. 		
F30903	Power unit: I2C bus error occurred		
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP2)		
Acknowledge:	IMMEDIATELY		
Cause:	Communications error with an EEPROM or A/D converter. Fault value (r0949, interpret hexadecimal): 80000000 hex: - internal software error. 00000001 hex 0000FFFF hex:		
Remedy:	 module fault. Re fault value = 80000000 hex: upgrade firmware to later version. Re fault value = 00000001 hex 0000FFFF hex: replace the module. 		
A30920 (F)	Temperature sensor fault		
Reaction:	NONE		
Acknowledge:	NONE		
Cause:	When evaluating the temperature sensor, an error occurred. Alarm value (r2124, interpret decimal): 1: Wire breakage or sensor not connected (KTY: R > 2120 Ohm). 2: Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).		
Remedy:	 make sure that the sensor is connected correctly. replace the sensor. 		
F30950	Power unit: Internal software error		
Reaction:	OFF2		
Acknowledge:	POWER ON		
Cause:	An internal software error has occurred. Fault value (r0949, interpret decimal): Information about the fault source. Only for internal Siemens troubleshooting.		
Remedy:	 If necessary, upgrade the firmware in the power unit to a later version. contact the Hotline. 		
A30999 (F, N)	Power unit: Unknown alarm		
Reaction:	NONE		
Acknowledge:	NONE		
Cause:	An alarm occurred on the power unit that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit.		

	Alarm value (r2124, interpret decimal):		
	Alarm number. Note:		
Remedy:	If required, the significance of this new alarm can be read about in a more recent description of the Control Unit. - replace the firmware on the power unit by an older firmware version (r0128).		
	- upgrade the firmware on the Control Unit (r0018).		
F34950	VSM: Internal software error		
Reaction:	OFF2		
Acknowledge:	POWER ON		
Cause:	An internal software error in the Voltage Sensing Module (VSM) has occurred. Fault value (r0949, interpret decimal): Information about the fault source. Only for internal Siemens troubleshooting.		
Remedy:	 If necessary, upgrade the firmware in the Voltage Sensing Module to a later version. contact the Hotline. 		
F35950	TM: Internal software error		
Reaction:	OFF2 (NONE)		
Acknowledge:	POWER ON		
Cause:	An internal software error has occurred.		
	Fault value (r0949, interpret decimal): Information about the fault source.		
	Only for internal Siemens troubleshooting.		
Remedy:	 If necessary, upgrade the firmware in the Terminal Module to a later version. contact the Hotline. 		
F36950	Hub: Internal software error		
Reaction:	OFF2 (NONE)		
Acknowledge:	POWER ON		
Cause:	An internal software error has occurred. Fault value (r0949, interpret decimal): Information about the fault source.		
_ .	Only for internal Siemens troubleshooting.		
Remedy:	 - if required, upgrade the firmware in the DRIVE-CLiQ hub module to a more recent version. - contact the Hotline. 		
A50001 (F)	PROFINET configuration error		
Reaction:	NONE		
Acknowledge:	NONE		
Cause:	A PROFINET controller attempts to establish a connection using an incorrect configuring telegram. The "Shared Device" function has been activated (p8929 = 2). Alarm value (r2124, interpret decimal):		
	 10: A/F-CPU configures mixed PZD/PROFIsafe telegram. 13: F-CPU and PROFIsafe is not activated (p9601.3). 15: PROFIsafe telegram of the F-CPU does not match the setting in p9501.30. 		
Remedy:	See also: p9601 (SI enable, functions integrated in the drive (processor 1)) Check the configuration of the PROFINET controllers as well as the p8929 setting.		
	DDOEINET Name of Station involid		
A50010 (F)	PROFINET Name of Station invalid		
Reaction:	NONE		
Acknowledge: Cause:	NONE PROFINET Name of Station is invalid.		
Remedy:	Correct the name of the station (p8920) and activate (p8925 = 2).		
	See also: p8920 (PN Name of Station)		

A50020 (F)	PROFINET: Second controller missing	
Reaction:	NONE	
Acknowledge:	NONE	
Cause:	The PROFINET function "Shared Device" has been activated (p8929 = 2). However, only the connection to a PROFINET controller is present.	
Remedy:	Check the configuration of the PROFINET controllers as well as the p8929 setting.	

Faults and alarms

BCC	Block Check Character
BCD	Binary-Coded Decimal
BI	Binector Input
BIA	BG-Institute for Occupational Safety and Health
BICO	Binector-Connector
BO	Binector Output
BOP	Basic Operator Panel
С	
С	Commissioning
СВ	Communication Board
CCW	Counter-Clockwise
CDS	Command Data Set
CI	Connector Input
СМ	Configuration Management
CMD	Command
СО	Connector Output
CO/BO	Connector Output / Binector Output
СОМ	Common contact on a changeover contact (terminal is connected to NO or NC)
CU	Control Unit
CW	Clockwise

Abbreviation	Meaning
D	
D/A	Digital-Analog Converter
DC	Direct Current
DDS	Drive Data Set
DI	Digital Input
DIP	DIP switch
DO	Digital Output
DP	Distributed I/Os
DS	Drive State
E	
EEC	European Economic Community
EEPROM	Electrically Erasable Programmable Read-Only Memory
ELCB	Earth Leakage Circuit Breaker
EMC	Electromagnetic Compatibility
EMF	Electromagnetic Force
ES	Engineering System
ESB	Equivalent circuit diagram
F	
FAQ	Frequently Asked Questions
FB	Function Block
FCC	Field Current Control
FCL	Fast Current Limitation
FF	Fixed Frequency
FFB	Free Function Block
FLB	Flat-top modulation
FOC	Field-Oriented Control
FP	Function diagram
FREQ	Frequency
FSA	Frame Size A
FSB	Frame Size B
FSC	Frame Size C
FSD	Frame Size D
FSE	Frame Size E
FSF	Frame Size F
G	
GSD	Generic Station Description
GSG	Getting Started Guide
GUI ID	Global Unique Identifier
н	
HIW	Main actual value
НМІ	Human Machine Interface
НО	High Overload (constant torque)
HSW	Main setpoint

Abbreviation	Meaning
HTL	High-Level Transistor Logic
I	
IASC	Internal Armature Short-Circuit
IBN	Commissioning
IGBT	Insulated Gate Bipolar Transistor
I/O	Input/Output
IOP	Intelligent Operator Panel
J	
JOG	Jogging
К	
KDV	Crosswise data comparison
KIB	Kinetic Buffering
L	
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LGE	Length
LO	Light Overload (variable torque)
LSTO	Latched Safe Torque Off
LWL	Fiber-optic cable
М	
MHB	Motor Holding Brake
MLP	Multi-Language Package
MOP	Motorized Potentiometer
Ν	
NC	Normally Closed Contact
NEMA	National Electrical Manufacturers Association
NO	Normally Open Contact
0	
OLM	Optical Link Module
OLP	Optical Link Plug
OP	Operator Panel
OPI	Operating Instructions
Р	
P1	Processor 1
P2	Processor 2
Pe	PROFlenergy
PID	Proportional Integral Differential
PKE	Parameter identifier
PKW	Parameter identifier value
PLC	Programmable Logic Controller
PM	Power Module
PM-IF	Power Module Interface
PPO	Parameter Process Data Object

Abbreviation	Meaning
PTC	Positive Temperature Coefficient
PWE	Parameter value
PWM	Pulse-Width Modulation
рхххх	Writable parameters
PZD	Process data
Q	
QC	Quick Commissioning
R	
RAM	Random Access Memory
RCCB	Residual Current Circuit Breaker
RCD	Residual Current Device
RFG	Ramp-Function Generator
RFI	Radio Frequency Interference
ROM	Read-Only Memory
RPM	Revolutions Per Minute
rxxxx	Read-only parameters of analog signals
RZM	Space vector modulation
S	
SBC	Safe Brake Control
SLS	Safely-Limited Speed
SLVC	Sensorless Vector Control
SOL	Serial Option Link
SS1	Safe Stop 1
STO	Safe Torque Off
STW	Control word
STX	Start of Text
SVM	Space Vector Modulation
Т	
TTL	Transistor-Transistor Logic
U	
V/f	Voltage/Frequency
USS	Universal Serial Interface
V	
VC	Vector Control
VT	Variable Torque
W	
WEA	Automatic restart
Z	
ZSW	Status word
ZUSW	Additional setpoint

DI5), 2-322 2223 Analog inputs as digital inputs (DI11), 2-323 2230 Digital outputs (DO0 ... DO1), 2-324 2410 PROFIBUS (PB) / PROFINET (PN), addresses and diagnostics, 2-334 2420 Telegrams and process data (PZD), 2-335 2440 PZD receive signals interconnection, 2-336

2441 STW1 control word interconnection (p2038 = 2), 2-3372442 STW1 control word interconnection (p2038 = 0), 2-3382444 STW3 control word interconnection (p2038 = 0), 2-339 2450 PZD send signals interconnection, 2-340 2451 ZSW1 status word interconnection (p2038 = 2), 2-3412452 ZSW1 status word interconnection (p2038 = 0), 2-3422454 ZSW3 status word interconnection (p2038 = 0), 2-343 2468 Receive telegram, free interconnection via BICO (p0922 = 999), 2-344 2470 Send telegram, free interconnection via BICO (p0922 = 999), 2-345 2501 Control word, sequence control, 2-354 2503 Status word, sequence control, 2-355 2505 Control word, setpoint channel, 2-356 2510 Status word 1 (r0052), 2-357 2511 Status word 2 (r0053), 2-358 2512 Control word 1 (r0054), 2-359 2513 Control word 2 (r0055), 2-360 2522 Status word, speed controller, 2-361 2526 Status word, closed-loop control, 2-362

2530 Status word, current control, 2-363 2534 Status word, monitoring functions 1, 2-364 2536 Status word, monitoring functions 2, 2 - 3652537 Status word, monitoring functions 3, 2-366 2546 Control word, faults/alarms, 2-367 2548 Status word, faults/alarms 1 and 2, 2-368 2634 Sequence control - Missing enables, 2 - 3692701 Basic brake control, 2-371 2800 Basic functions, parameter manager, 2 - 3732802 Basic functions, monitoring functions and faults/alarms, 2-374 2804 Basic functions, status words, 2-375 2810 Basic functions, STO, Safe Torque Off, 2-376 2812 Basic functions, F-DI, fail-safe digital input, 2-377 3010 Fixed frequencies, binary selection (p1016 = 2), 2-3793011 Fixed frequencies, direct selection (p1016 = 1), 2-3803020 Motorized potentiometer, 2-381 3030 Main/supplementary setpoint, setpoint scaling, jogging, 2-382 3040 Direction limitation and direction reversal, 2 - 3833050 Skip frequency bands and speed limitations, 2-384 3070 Extended ramp-function generator, 2-385

6030 Speed setpoint, accelerationmodel, 2-391 6040 Speed controller, 2-392 6060 Torque setpoint, 2-393 6220 Vdc max controller and Vdc min controller (vector control), 2-394 6300 V/f characteristic and voltage boost, 2-387 6310 Resonance damping and slip compensation. 2-388 6320 Vdc_max controller and Vdc_min controller (V/f control), 2-389 6630 Upper/lower torque limit, 2-395 6640 Current/power/torque limits , 2-396 6710 Current setpoint filter, 2-397 6714 Ig and Id controller, 2-398 6721 Id setpoint (PEM, p0300 = 2), 2-399 6722 Field weakening characteristic, Id setpoint (ASM, p0300 = 1), 2-400 6723 Field weakening controller, flux controller (ASM, p0300 = 1), 2-401 6724 Field weakening controller (PEM, p0300 = 2), 2-402 6730 Interface to the Power Module (ASM, p0300 = 1), 2-403 6731 Interface to the Power Module (PEM, p0300 = 2), 2-4046799 Display signals, 2-405 7017 DC braking (p0300 = 1), 2-407 7950 Fixed values, binary selection (p2216 = 2), 2-4097951 Fixed values, direct selection (p2216 = 1), 2-410

7954 Motorized potentiometer, 2-411 7958 Control, 2-412 8010 Speed signals 1, 2-414 8011 Speed signals 2, 2-415 8012 Torque signals, motor locked/stalled, 2-416 8014 Thermal monitoring, power unit, 2-417 8016 Thermal monitoring, motor, 2-418 8017 Thermal I2t motor model (PEM, p0300 = 2), 2-419 8020 Monitoring functions 1, 2-420 8021 Monitoring functions 2, 2-421 8060 Fault buffer, 2-423 8065 Alarm buffer, 2-424 8070 Fault/alarm trigger word (r2129), 2-425 8075 Fault/alarm configuration, 2-426 8560 Command data sets (CDS), 2-428 Drive data set (DDS), 2-429 9204 Receive telegram, free PDO mapping (p8744 = 2), 2-3479206 Receive telegram, Predefined Connection Set (p8744 = 1), 2-348 9208 Send telegram, free PDO mapping (p8744 = 2), 2-3499210 Send telegram, Predefined Connection Set (p8744 = 1), 2-350 9220 Control word, CANopen, 2-351 9226 Status word, CANopen, 2-352 9310 Configuration, addresses and diagnostics, 2-328

9342
STW1 control word interconnection, 2-329
9352
ZSW1 status word interconnection, 2-330
9360
Receive telegram, free interconnection via BICO, 2-331
9370
Send telegram, free interconnection via BICO, 2-332
9567
Analog input 0 (AI0), 2-325
9573
Analog output 0 (AO0), 2-326

Α

Acknowledgement IMMEDIATELY, 3-435 POWER ON, 3-435 Adjustable parameter, 1-8 Alarm Difference to a fault, 3-433 Display, 3-432 General information, 3-432 Number range, 3-436 Alarm buffer, 2-422 Alarm messages, 3-436 Analog inputs, 2-321 Analog outputs, 2-321 ASCII table, A-504

В

BICO technology, 2-312 Bit array (parameters), 1-14 Brake control, 2-370

С

Calculated, 1-11 Can be changed (parameters), 1-12 CANopen, 2-327, 2-346 CDS, Command Data Set, 2-427, 2-428 Command data sets, 2-427 Configuring messages, 2-422 Control Technology controller, 2-412 V/f control, 2-386 Vector, 2-390 Control words, 2-333 Converter Connector-binector, 2-344

D

Data set, 2-427

Data set (parameters), 1-12 Data type (parameters), 1-10 DC braking, 2-407 DCBRK. 3-434 DDS, Drive Data Set, 2-427, 2-429 Dependency (parameters), 1-14 Description (parameters), 1-14 Digital inputs, 2-321 Digital outputs, 2-321 Direction limitation, 2-378 Direction reversal, 2-378 Display Alarms, 3-432 Faults, 3-432 Display parameter, 1-8 Drive data sets, 2-427

F

Fault Acknowledgement, 3-435 Difference to an alarm, 3-433 Display, 3-432 Fault reaction, 3-434 General information, 3-432 Number range, 3-436 Fault buffer, 2-422 Structure, 2-423 Fault messages, 3-436 Fixed speed setpoints, 2-378 Fixed values, 2-409, 2-410 Free interconnection via BICO, 2-333 Function diagrams, brake control Basic brake control, 2-371 Function diagrams, CANopen Control word, CANopen, 2-351 Receive telegram, free PDO mapping (p8744 = 2), 2-347Receive telegram, Predefined Connection Set (p8744 = 1), 2-348 Send telegram, free PDO mapping (p8744 = 2), 2-349Send telegram, Predefined Connection Set (p8744 = 1), 2-350 Status word, CANopen, 2-352 Function diagrams, data sets Command data sets (CDS), 2-428 Drive data set (DDS), 2-429

Function diagrams, faults and alarms Alarm buffer, 2-424 Fault buffer. 2-423 Fault/alarm configuration, 2-426 Fault/alarm trigger word (r2129), 2-425 Function diagrams, fieldbus interface Configuration, addresses and diagnostics, 2-328 Receive telegram, free interconnection via BICO, 2-331 Send telegram, free interconnection via BICO, 2-332 STW1 control word interconnection, 2-329 ZSW1 status word interconnection. 2-330 Function diagrams, general information Explanation of the symbols (Part 1), 2-309 Explanation of the symbols (Part 2), 2-310 Explanation of the symbols (Part 3), 2-311 Handling BICO technology, 2-312 Function diagrams, input/output terminals Analog input 0 (AI0), 2-325 Analog inputs as digital inputs (DI11), 2-323 Analog output 0 (AO0), 2-326 Digital inputs, electrically isolated (DI0 ... DI5), 2-322 Digital outputs (DO0 ... DO1), 2-324 Function diagrams, internal control/status words Control word 1 (r0054), 2-359 Control word 2 (r0055), 2-360 Control word, faults/alarms, 2-367 Control word, sequence control, 2-354 Control word, setpoint channel, 2-356 Sequence control - Missing enables, 2-369 Status word 1 (r0052), 2-357 Status word 2 (r0053), 2-358 Status word, closed-loop control, 2-362 Status word, current control, 2-363 Status word, faults/alarms 1 and 2, 2-368 Status word, monitoring functions 1, 2 - 364Status word, monitoring functions 2, 2 - 365Status word, monitoring functions 3, 2 - 366Status word, sequence control, 2-355 Status word, speed controller, 2-361

Function diagrams, overviews Internal control/status words, data sets, 2 - 315Monitoring functions, faults, alarms, 2-320 PROFIdrive/PROFIBUS, 2-314 Setpoint channel, 2-316 Vector control, current control, 2-319 Vector control, speed control and generation of the torque limits, 2-318 Vector control, V/f control, 2-317 Function diagrams, PROFIdrive PROFIBUS (PB) / PROFINET (PN), addresses and diagnostics, 2-334 PZD receive signals interconnection, 2-336 PZD send signals interconnection, 2-340 Receive telegram, free interconnection via BICO (p0922 = 999), 2-344 Send telegram, free interconnection via BICO (p0922 = 999), 2-345 STW1 control word interconnection (p2038 = 0), 2-338STW1 control word interconnection (p2038 = 2), 2-337STW3 control word interconnection (p2038 = 0), 2-339Telegrams and process data (PZD), 2 - 335ZSW1 status word interconnection (p2038 = 0), 2-342ZSW1 status word interconnection (p2038 = 2), 2-341ZSW3 status word interconnection (p2038 = 0), 2-343Function diagrams, Safety Integrated Basic functions, F-DI, fail-safe digital input, 2-377 Basic functions, monitoring functions and faults/alarms, 2-374 Basic functions, parameter manager, 2-373 Basic functions, status words, 2-375

Basic functions, STO, Safe Torque Off, 2-376

Function diagrams, setpoint channel Direction limitation and direction reversal, 2 - 383Fixed frequencies, binary selection (p1016 = 2), 2-379 Fixed frequencies, direct selection (p1016 = 1), 2-380Main/supplementary setpoint, setpoint scaling, jogging, 2-382 Motorized potentiometer, 2-381 Ramp-function generator (extended), 2-385 Skip frequency bands and speed limitations, 2-384 Function diagrams, signals and monitoring functions Monitoring functions 1, 2-420 Monitoring functions 2, 2-421 Speed signals 1, 2-414 Speed signals 2, 2-415 Thermal I2t motor model (PEM, p0300 = 2), 2-419 Thermal monitoring, motor, 2-418 Thermal monitoring, power unit, 2-417 Torque signals, motor locked/stalled, 2-416 Function diagrams, technology controller Control, 2-412 Fixed values, binary selection (p2216 = 2), 2-409Fixed values, direct selection (p2216 = 1), 2 - 410Motorized potentiometer, 2-411 Function diagrams, technology functions DC braking (p0300 = 1), 2-407 Function diagrams, V/f control Resonance damping and slip compensation, 2-388 V/f characteristic and voltage boost, 2-387 Vdc_max controller and Vdc_min controller, 2-389

Function diagrams, vector control Current setpoint filter, 2-397 Current/power/torque limits , 2-396 Display signals, 2-405 Field weakening characteristic, Id setpoint (ASM, p0300 = 1), 2-400 Field weakening controller (PEM, p0300 = 2), 2-402 Field weakening controller, flux controller (ASM, p0300 = 1), 2-401 Id setpoint (PEM, p0300 = 2), 2-399 Interface to the Power Module (ASM, p0300 = 1), 2-403 Interface to the Power Module (PEM, p0300 = 2), 2-404 Ig and Id controller, 2-398 Speed controller, 2-392 Speed setpoint, accelerationmodel, 2-391 Torque setpoint, 2-393 Upper/lower torque limit, 2-395 Vdc max controller and Vdc min controller. 2-394

G

General information About parameters, 1-8 on faults and alarms, 3-432 on function diagrams, 2-308

I

IASC, 3-434 Index (parameters), 1-8, 1-14 Input/output terminals, 2-321 Analog inputs, 2-321 Digital inputs, 2-321 Internal control words, 2-353 Internal control/status words, 2-353

J

Jogging, 2-378, 2-382

L List

Abbreviations, B-505 ASCII table, A-504 Binector inputs (BI parameters), 1-292 Binector outputs (BO parameters), 1-294 Command data sets, 1-285 Complete table of contents, Contents-5 Connector inputs (CI parameters), 1-293 Connector outputs (CO parameters), 1-294 Connector/binector outputs (CO/BO parameters), 1-297 Drive data sets, 1-287 Encoder data sets, 1-291 Fault and alarm messages, 3-436 List of abbreviations, B-505 Message ranges, 3-436 Motor data sets, 1-290 Parameter ranges, 1-15 Parameters for quick commissioning, 1-300 Parameters for write protection and knowhow protection, 1-298 Parameters, all, 1-18 Power unit data sets, 1-291 Table of contents, function diagrams, 2-304 List of abbreviations, B-505 Load monitoring, 2-413

Μ

Manufacturer-specific telegrams, 2-335 Message buffer, 2-422 Messages, 2-413 Monitoring functions, 2-413 Motorized potentiometer, 2-378, 2-411

Ν

Name Parameter, 1-9 Number Parameter, 1-8 Number range Alarms, 3-436 Faults, 3-436 Parameter, 1-15

0
